

Impressed by Elon Musk's cross-city traffic project video

The Boring Company - The Bland Company, a company that makes a tunnel through the city to avoid the traffic jams of Elon Musk, launched the first tunnel video that surprised and impressed many people.

The Boring Company - The Bland Company, a company that makes a tunnel through the city to avoid the traffic jams of Elon Musk, launched the first tunnel video that surprised and impressed many people.

1. For the first time in history, SpaceX successfully launched Falcon 9 reusable missiles
2. Traffic works have 1-0-2 in the world

How will this system work? Check out the video below and give your comment.

The system of traffic jams of Bland Company will work like this.

The car will stand on a rack and then be taken down to the underground. Those electric slides will carry cars and glide on built-in rails at speeds of 200km / h. Vehicles are transported in the tunnel below the city before being taken to the common road in the area as wide as two parking spaces. With such a huge underground tunnel and the speed of transporting vehicles so quickly, the traffic on the ground will become more open, the travel time will be greatly saved.

The "monster" machine named **Godot** with a diameter of 8m, up to 120m in length, weighs 12,000 tons used by Musk's digging team to build this tunnel.

The Shy company has already done some Los Angeles tunneling tests, the first tunnel will run straight from Los Angeles International Airport to Culver City, Santa Monica, Westwood and Sherman Oaks.

In the future, this underground project is extended to a larger area of ??Los Angeles. The Boring Company director aspires to build a 30-storey underground transport system.

According to Elon Musk, the construction of an elevator - a car stand on a ladder up and down - will be able to combine the entrance and exit of the tunnel system with existing and space-saving infrastructures, only two parking spaces. When the car gets on the electric skid plate, it will move under the tunnel at speeds up to 200km / h, allowing you to travel from Westwood to LAX in just 6 minutes.
