

Impressive series that Cassini captured before 'suicide'

Below are impressive astronomical photos, becoming the invaluable asset of the human being that Cassini spacecraft captured and sent.

After 13 years of discovery, NASA's \$ 3.3 billion Cassini spacecraft will fly through Saturn's atmosphere and crash into the surface of this massive planet suicide to collide with Titan satellites. and Enceladus, which are most likely to find the most alien life in the solar system.

1. For the first time in history, Cassini obtained strange sounds from Saturn
2. NASA's Cassini spacecraft is about to commit suicide on Saturn next week

Below are impressive astronomical photos, becoming the invaluable asset of the human being that Cassini spacecraft captured and sent.
