

Improve the quality of music playback on your computer with DFX Audio Enhancer

When listening to music on a computer, there may be some factors that affect sound quality such as speaker quality, music files. So today, we are going to share with you a small tool called DFX Audio Enhancer to enhance the music quality by amplifying sound and many other interesting features. Please consult.

When listening to music on a computer, there may be some factors that affect sound quality such as speaker quality, music files. So today, we are going to share with you a small tool called **DFX Audio Enhancer** to enhance the music quality by amplifying sound and many other interesting features. Please consult.

At the main interface you will see some specific key functions as follows (You can easily change those properties by moving the controls):

1. **Fidelity** : Ensuring sound authenticity and removing noise, will give the best sound.
2. **Ambience** : Create a realistic, stereo sound
3. **3D Surround** : Create **3D** sound (3D)
4. **Dynamic Gain Boosting** : Boosts sound, creates loudness for audio on your computer

Besides, it also has 2 more features

1. Easily switch between external speakers and headphones (Speaker / HeadPhone)
2. Adjust the large and small level of the lyrics (Music Type I / Music Type II / Speech).
3. What is an MP3 file? What software do you listen to MP3 music on your computer?
4. Make a simple music speaker, why not?
5. 4 best sound improvement apps for Android

I wish you all happy music!
