

Included iOS 12.1.3 with some improvements and bug fixes for iPhone and iPad

Apple has just officially released the iOS 12.1.3 update with some improvements and bug fixes to provide a better experience for users on the iPhone and iPad.

Apple has just officially released the iOS 12.1.3 update with some improvements and bug fixes to provide a better experience for users on the iPhone and iPad.

The parts that have been fixed in iOS 12.1.3 include:

1. Problems in Messages may affect scrolling through images in the Details view that have been fixed.
2. Troubleshoot photos after being sent from the Share Table may appear strange stripes.
3. Solve problems when using external audio input devices on the iPad Pro (2018) that may cause distortion.
4. Troubleshooting can cause the connection of certain CarPlay systems with iPhone XR, iPhone XS and iPhone XS Max to be disconnected.

Currently, iOS 12.1.3 has been released by Apple for all users of iPhone, iPad and iPod Touch via OTA (Settings -> General settings -> Software update). You can proceed to update to this latest version now.

Note:

Before updating, you should back up data and charge more than 50% to prevent unfortunate circumstances.
