

Increase read and write speed of USB

During the process of using USB, you see that the data reading and writing speed of USB is very slow. You can maximize the speed of USB read and write with just a few steps below.

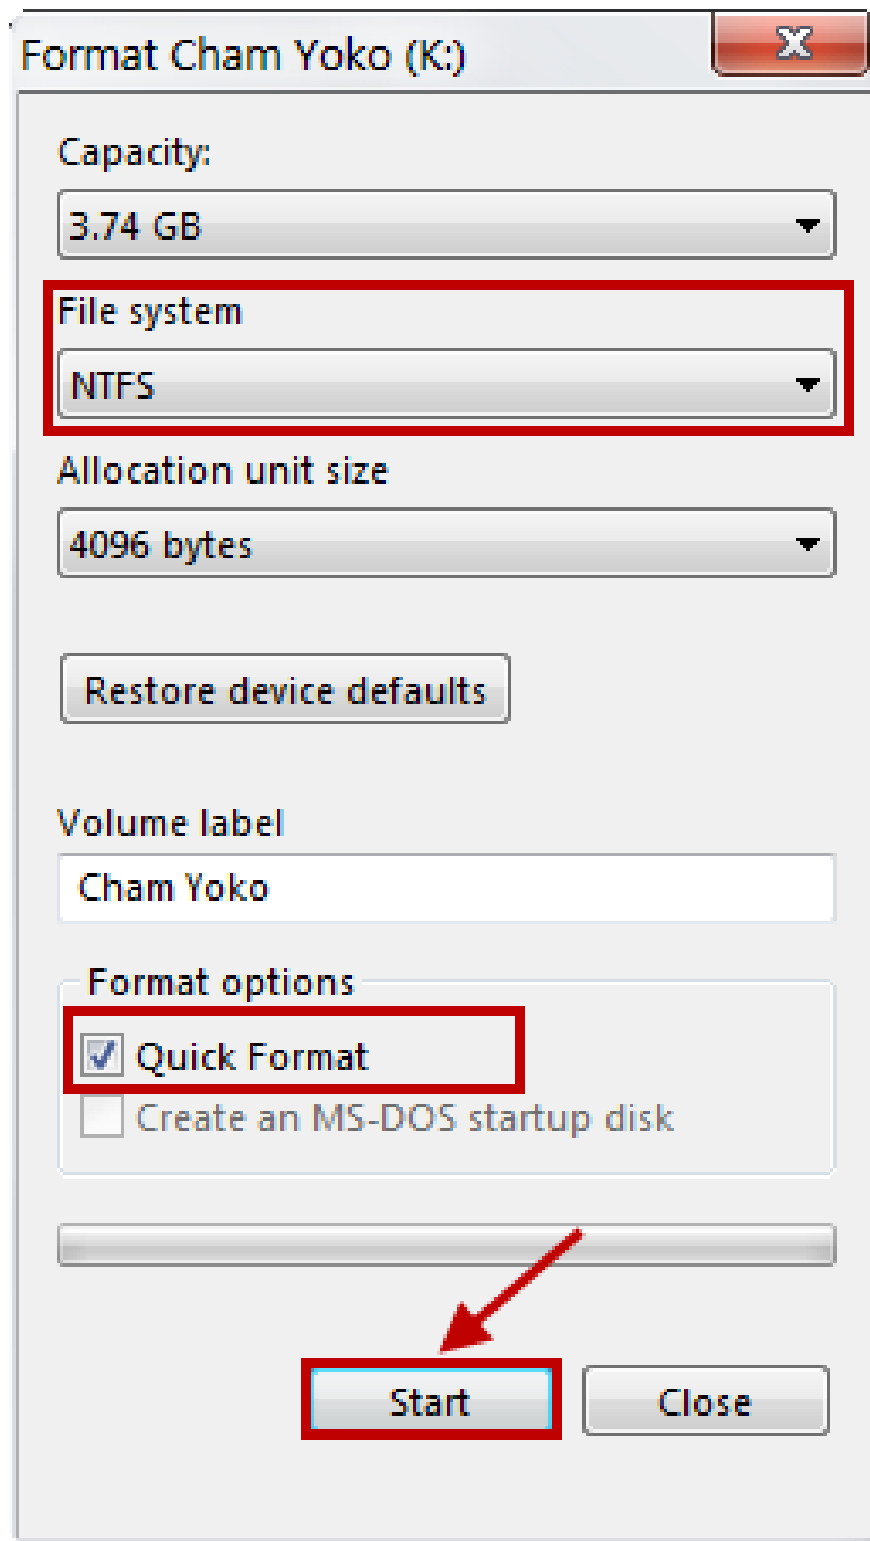

Currently, with many online storage services that help you store data safely and effectively, USB storage devices are still very popular thanks to its convenience and portability. During the process of using USB, you see that the data reading and writing speed of USB is very slow.

You can maximize the speed of USB read and write with just a few steps:

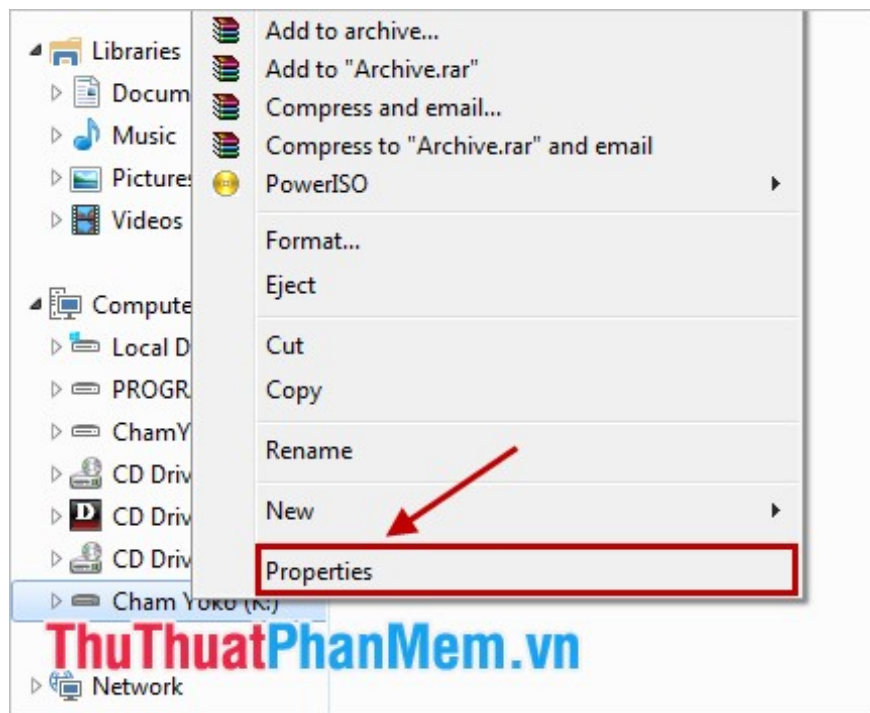

Step 1: First plug the USB into the computer, then you need to reformat the USB to **NTFS** . Right-click on the USB name in Computer and select **Format** .

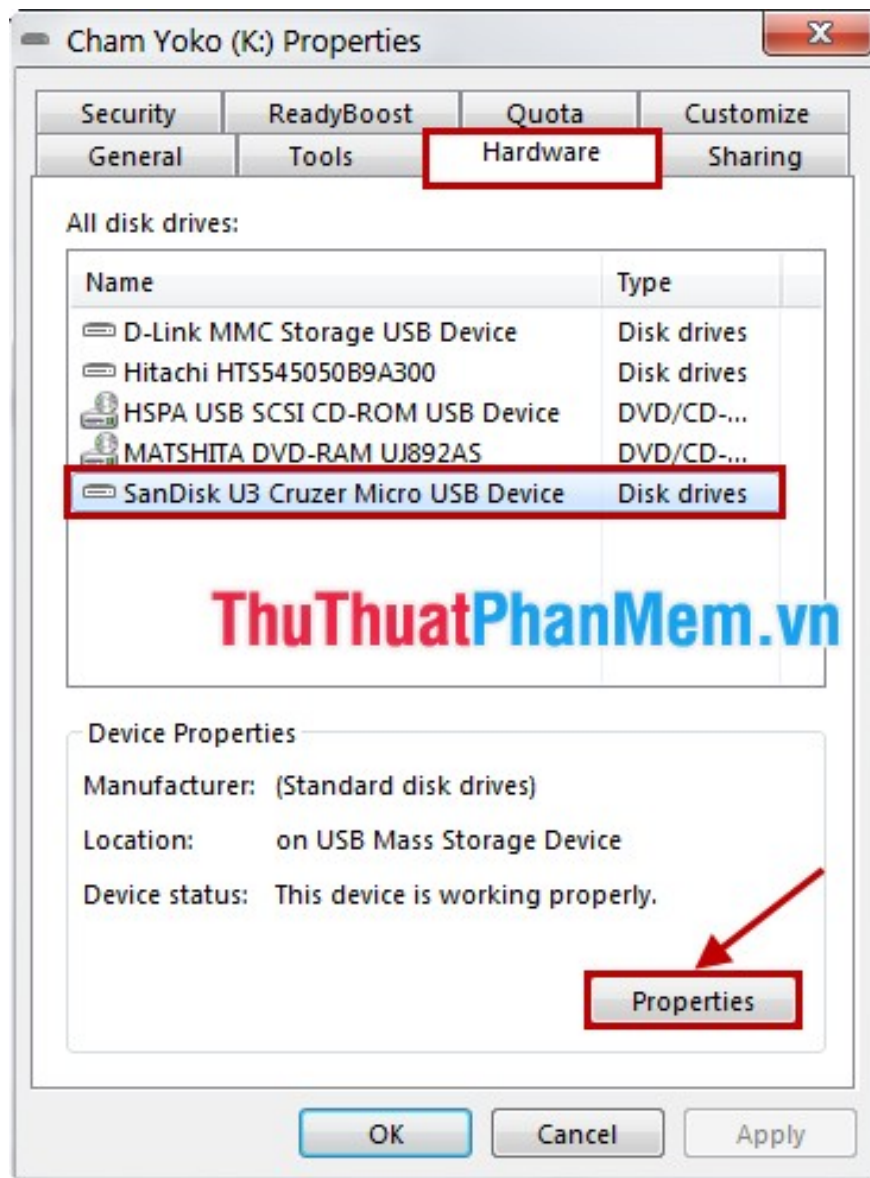

Step 2: In the Format dialog box, select **NTFS** in the **File system** , uncheck the **Quick Format** option and click **Start** to Format.

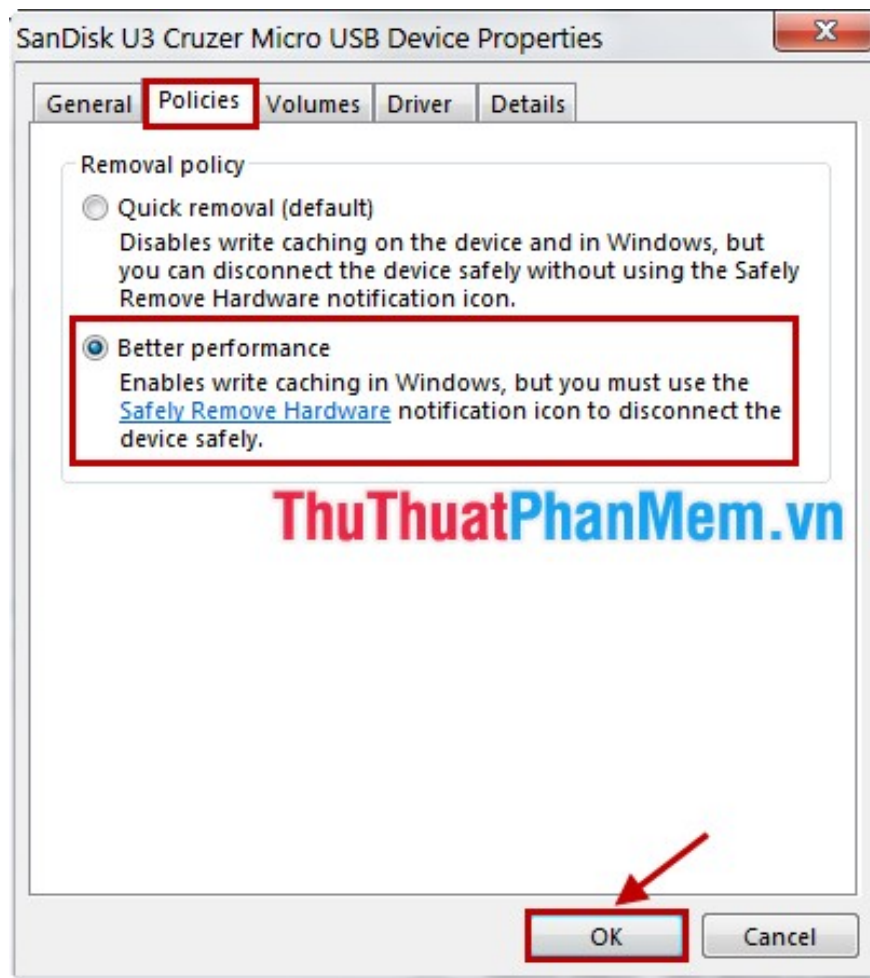

Step 3: After USB Format, right-click **USB** name -> **Properties** .

Step 4: The **Properties** dialog box appears , select the **Hardware** tab in the **All disk drivers** section, select the USB drive name and click **Properties** .

Step 5: The **Device Properties** dialog box appears, select the **Policies** tab and select the **Better performance** option -> **OK**.

Note: When you choose Better Performance, when you disconnect the USB you need to operate Safely remove from the taskbar to avoid losing files or completely corrupting the USB.

So with some very simple operations, you quickly increased the speed of reading and writing for your USB device. Good luck!
