

Increase the LG G3's outdoor visibility

LG G3 is the phone with the most beautiful and powerful screen today. However, the LG G3 still faces some performance issues and outdoor visibility.

LG G3 is the phone with the most beautiful and powerful screen today. However, the LG G3 still faces some performance issues and outdoor visibility.

PhoneArena has compiled some tips from the XDA forum's *stefan063* member to increase performance and improve G3's outdoor visibility.

Despite being a key product of LG, the G3 CPU processor sometimes does not guarantee performance. In addition, the automatic screen brightness reduction feature has caused no problems when used outdoors.

To fix the above problem, you can follow these steps:

Step 1: Open the phone dialer on the LG G3.

Now enter the following codes, depending on your phone version to activate the hidden menu:

1. **LG G2 D855 International:** 3845 # * 855 #
1. **LG G3 D850 AT&T:** 3845 # * 850 #
1. **LG G3 D851 T-Mobile:** 3845 # * 851 #
1. **LG G3 LS980 Sprint:** 5689 # * 980 #
1. **LG F460 Korea:** 3845 # * 400 #

Step 2: When you see the **service** menu appear on your phone, scroll down to the **High Temperature Property OFF option** . Activate it to **ON** .

Step 3: Continue to open the dialer and enter the code. This time find " *Thermal mitigation daemon OFF* ". Activate it to **ON** .

Step 4: Now exit the menu and power off your phone. Wait about 30 seconds, then turn on your phone and wait for the phone to complete the **Sync** task.

Step 5: Adjust the screen brightness accordingly. If you are outdoors or have a higher brightness level. Finally, enjoy the new power from the LG G3 phone.

Note: Be careful because the automatic light adjustment mode is also disabled, so you have to manually change the brightness level when needed. In addition, the screen brightness reduction feature when the machine is operating is an adjustment of the manufacturer to reduce heat for the product. Therefore, you should not leave the brightness level too high and limit the use when feeling the phone is too hot.
