

Increase volume on Win 10 laptop without software

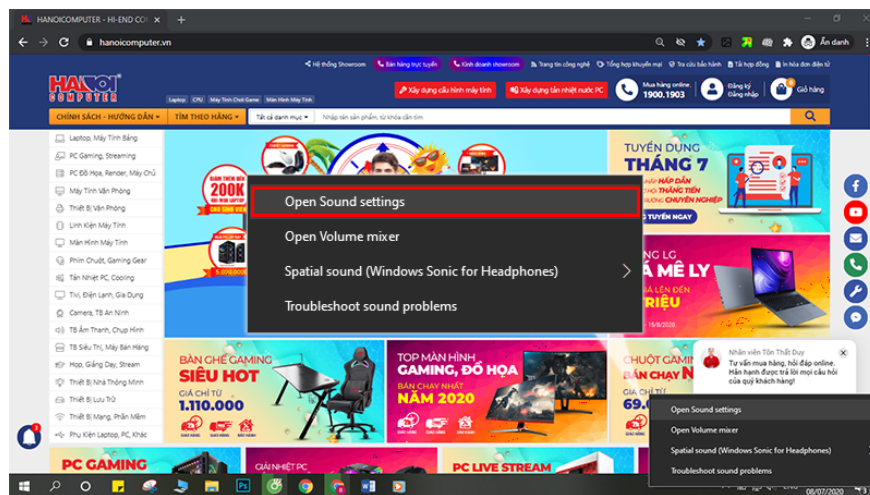

!!

Instructions on how to increase volume on laptop without software on the latest Win 10!

Do you feel that your computer speakers are too small, unable to meet your work and entertainment needs?! Without any software, let's join HANOICOMPUTER to learn how to increase the volume on the latest version of Win 10 laptop in the article below!

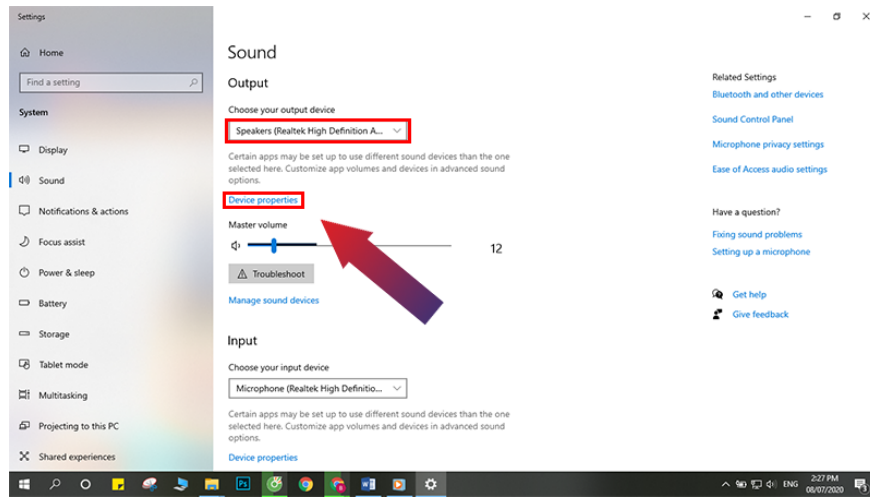

Step 01

To increase the volume on a Win 10 laptop without software, first we need to right-click on the speaker icon on the taskbar > Select Open Sound Settings

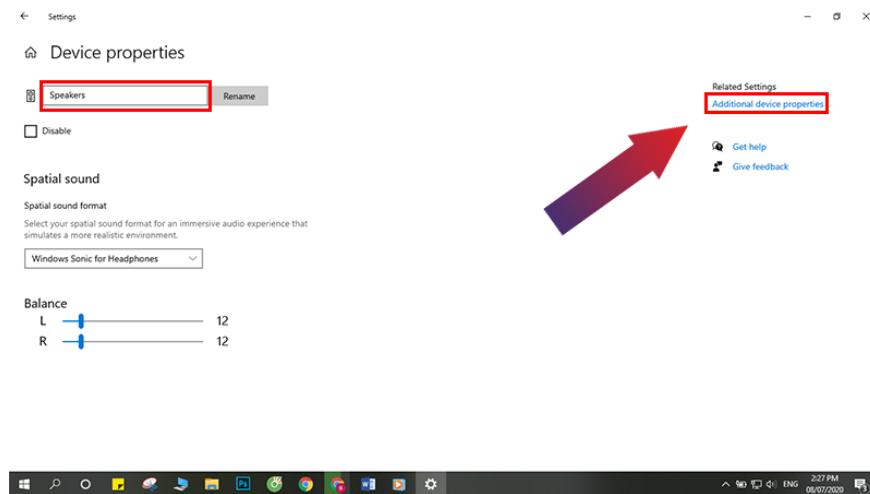

Step 02

In the Output section, select Speakers > Click Device properties

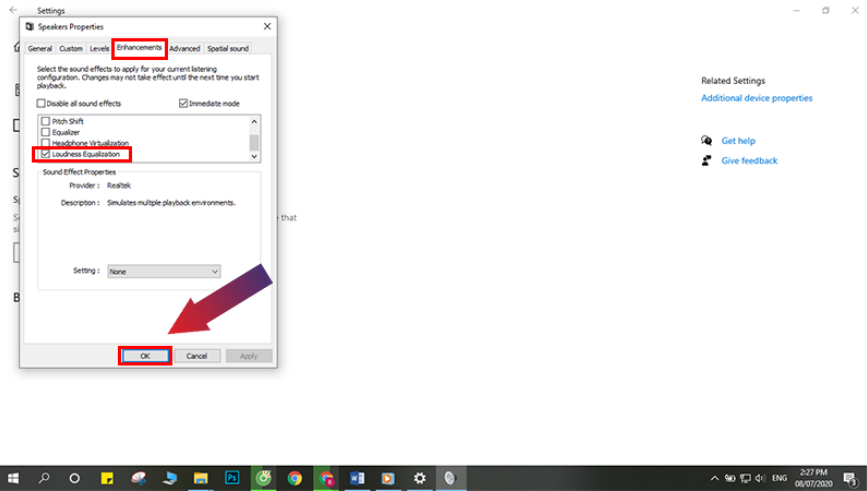

Step 03

Select Additional device properties in the upper right corner to open the Speaker Properties window

Step 04

Select the Enhancements tab in the Speaker Properties window > Click Loudness Equalization > Click OK to save.

So we have completed the task of increasing the volume on the laptop. Experience the difference right away! Hopefully your laptop speaker volume has increased significantly after applying the above method. If you are still not satisfied with the results, you can use sound amplification software to improve it.

Thank you for taking the time to read the article, HANOICOMPUTER hopes you have gained more useful information through this article.
