

INK HUNTER, the application that uses AR technology to help you try tattoos before the real tattoo

INK HUNTER is an application that uses AR technology on the phone to help users to try 'tattooing' virtual tattoos on their bodies to express their personality, show off to friends or see if it is beautiful or not. when deciding on a real tattoo.

INK HUNTER is an application that uses AR technology on the phone to help users to try 'tattooing' virtual tattoos on their bodies to express their personality, show off to friends or see if it is beautiful or not. when deciding on a real tattoo.

In INK HUNTER there is a stock tattoo available for users to choose from. Or if you want, you can also draw your own unique pictures right on the app to 'tattoo'.

Currently, INK HUNTER is available on both iOS and Android platforms, users can access the link below to download this free app for free.

1. INKHUNTER try tattoo designs on the App Store
2. INKHUNTER - try tattoo designs on Google Play

How to use INK HUNTER is very simple. You just need to draw a smiley image in the form of 2 parallel lines and 1 perpendicular line like the camera's guide to the position you want to tattoo. Then, point the phone camera (opened INK HUNTER) to that location so that the application can locate and 'tattoo' the picture on you. You can observe the tattoo after 'printing' on your body in many ways and try in many positions to find the best place. In addition, you can also edit the tattoo accordingly.
