

Instagram allows sharing posts to Stories

The new Instagram feature allows users to share photos posted directly to their Instagram Story. The boundary between the post and Story is increasingly blurry.

The new Instagram feature allows users to share photos posted directly to their Instagram Story.

According to Instagram, the new feature will help friends or sites you follow disseminate content when others can share the content they post. (It's easier than taking a screenshot or saving and then sharing).

Any post shared on Story will have the original username and the link back to the original post. Posts that are shared on Story as a sticker can be rearranged, resized, and placed in the background before posting.

Share the post to Story

Users share by touching the plane icon in the right corner to use to share as Instagram Direct. Now there will be more options to create Story. Only posts from the Public account can be shared on Story and users if desired, so that others cannot be shared again.

New features will be released on Android today, the version on iOS will appear in the next few weeks.
