

# Instagram integrates Focus shooting mode (removing fonts) without a dual camera

Instagram - Social network sharing free photos, adding Focus shooting mode (font removal) to some iPhone and Android devices in Instagram update version 39.0.

Instagram - Social network sharing free photos, adding Focus shooting mode (font removal) to some iPhone and Android devices in Instagram update version 39.0.

Similar to iPhone 7 Plus, 8 Plus, iPhone X or Samsung Galaxy Note 8 . Instagram Focus mode has font removal feature. It is created by software and is popular with wider features on mobile devices.

Devices that support the Focus feature of Instagram

1. Apple iPhone series: SE model and older and iOS devices are also added @mention sticker so that users can attach friends on Stories.
2. With Android devices: Android flagship lines like Google Pixel 2, Huawei Mate 10 Pro or Samsung Galaxy S9 are supported. Other Android devices must have a built-in camera to remove fonts.

To use the new font removal feature on Instagram, you need to open the Instagram camera. Focus mode is right between Boomerang and Superzoom. Just click on Focus mode, you will see the image in the background will be automatically blurred by the software, select the owner to remove the font and take a photo manipulation.

Latest update link of Instagram app:

1. Instagram for iOS
2. Instagram for Android
