

# Install Win 10 for Android tablet

There is a program called Change My Software that promises to install Windows on Android devices. Note this will void the warranty of the tablet.

Although there are some tablets running Windows 10, the number of tablets running Android is even greater. Most of these tablets even come with keyboards, allowing people to work with them as they do on a Windows desktop or tablet. But what if you want to install Windows on an Android tablet? There is a program called Change My Software that promises to install Windows on Android devices. Note this will void the warranty of the tablet.

Please remember that this application is unsupported third party software or authorized by Google or Microsoft. Additionally, the tablet's hardware may not be suitable for running Windows, even with Change My Software. Here's how to **install Windows on Android tablet** with Change My Software.

## Download and install Change My Software

You must first install the Change My Software application on your Windows PC. There are several versions of the application, each for a different operating system version (Windows XP, Windows 7, Windows 8, Windows 8.1 and Windows 10).

You can download all versions in a ZIP file here :

<https://www.mediafire.com/file/ip98qisapi74cy1/ChangeMySoftwares.com.rar/file> .

## Steps to install Windows on Android

After installing Change My Software on the PC, here are the steps you will need to install Windows on an Android tablet with this tool.

1. Ensure your Windows PC has a high-speed Internet connection.
2. Connect your Android tablet to a Windows PC, via a USB cable
3. Open the version of the Change My Software tool you want to use.
4. Select the **Android** option in Change My Software, followed by the language you want to use.
5. After that, the Change My Software application will begin downloading the necessary driver from the Windows PC to the Android tablet.
6. Once completed, click on '**Install**' to begin the process. Obviously, you should keep your tablet connected to your Windows PC the whole time. If you want to dual-boot between Windows and Android on your tablet when the process is over, do not check the '**Remove Android**' box in the Change My Software application.
7. Once Windows has been installed on an Android device, the device will boot directly to the Windows operating system or go to the '**Choose and operating system**' screen if you decide to turn this tablet into a dual boot device. . After that, the Windows version will begin its own normal setup process.

Although Change My Software will work, it should be stressed once again that installing Windows on an Android tablet will invalidate the warranty of the device and the software itself is not supported or Google or Microsoft approves.

Hope you are succesful.
