Things to prepare before installing Windows 10 with USB Boot

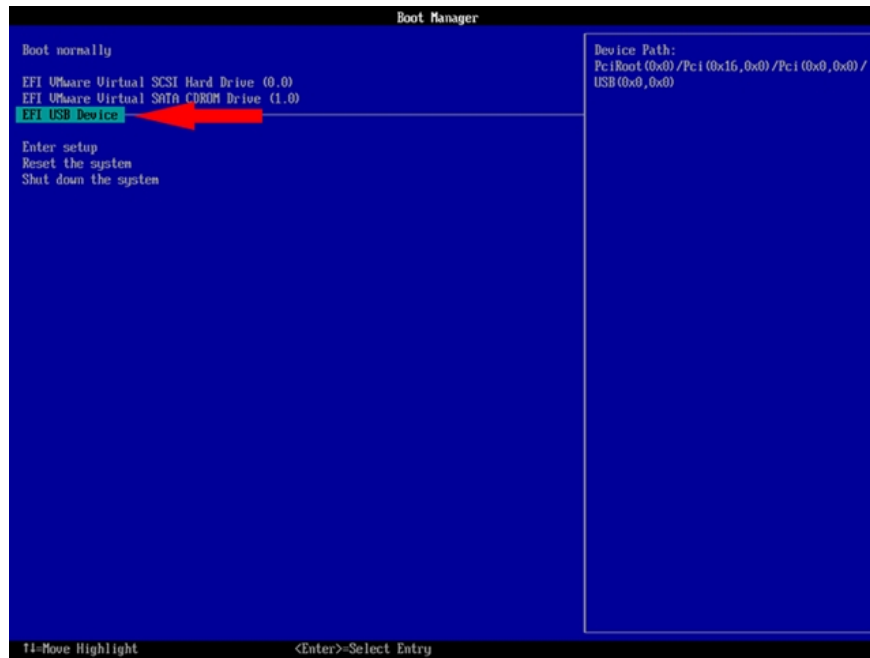

Download the Windows 10 installation file (ISO file).

USB has a capacity of more than 4 GB.

Create USB Boot for Windows 10 installation process.

How to install Windows 10 with USB Boot

B1: Plug USB Boot into the computer where you want to install Windows 10.

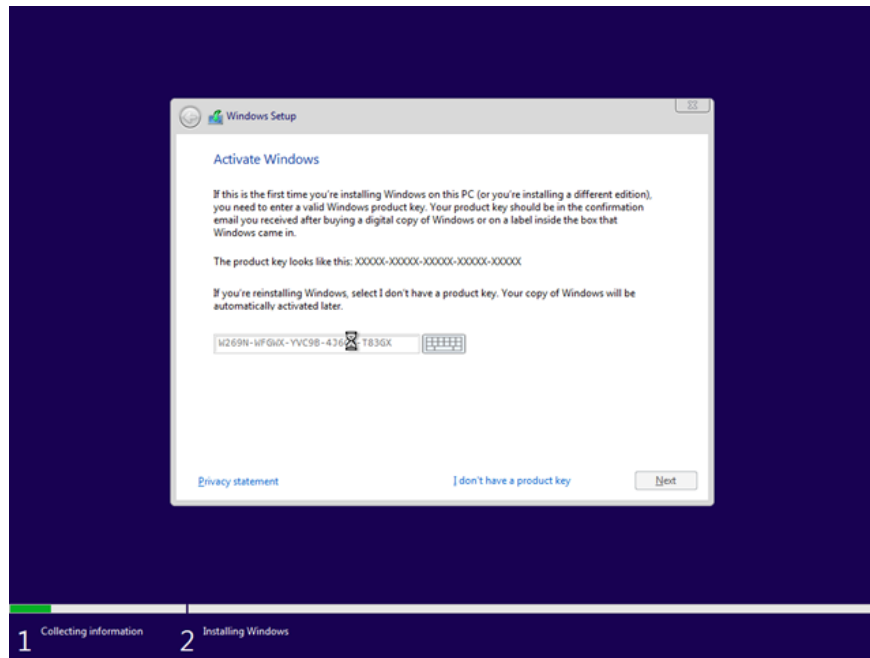

B2: Start the computer, when the screen appears, press the shortcut key to access the Boot menu.

Note: Each machine has a different Boot access shortcut, search the internet with the keyword: 'Boot shortcut + laptop brand name'. You can also try the following key combinations: F2 to F12 or Del and Esc keys.

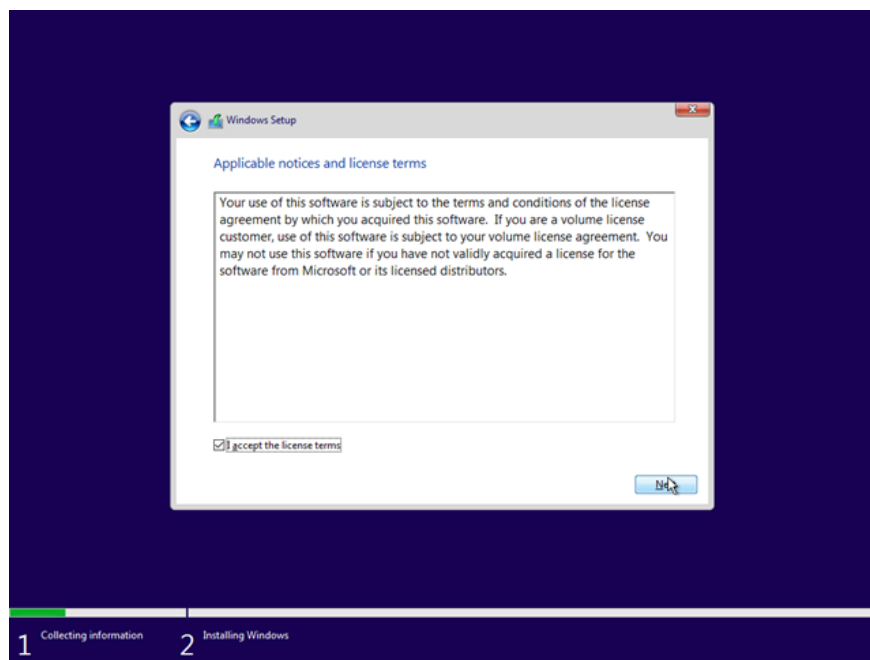

B3: Select the language (recommended to English). Continue to select the time format in the Time and currency format section (should keep English United States). Select the keyboard format in Keyboard or input method (should keep the US). Finally, click Next.

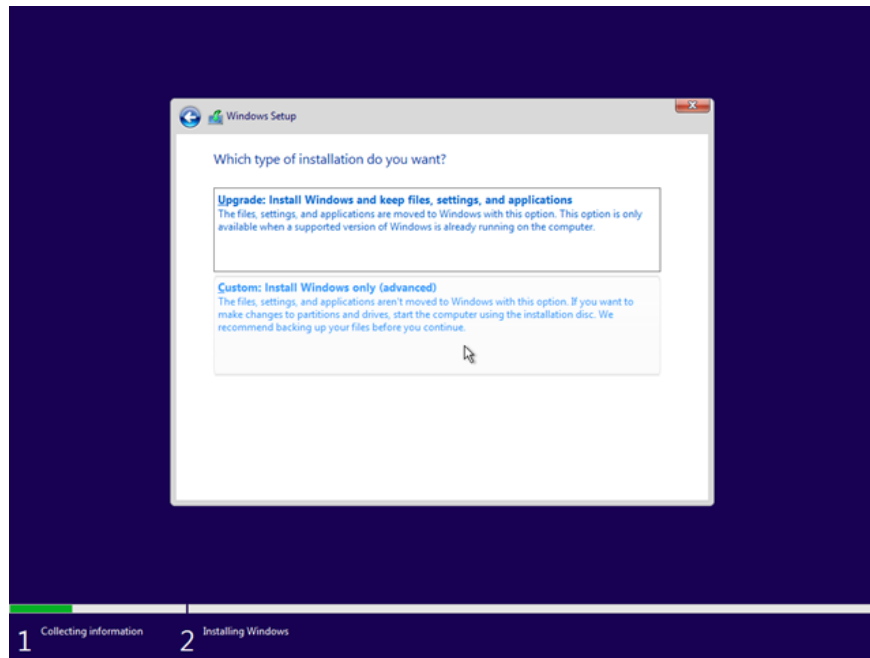

B4: Enter your Windows installation key. This key can be purchased at licensed Windows 10 stores. Click Next to continue.

B5: Agree to the terms and click Next.

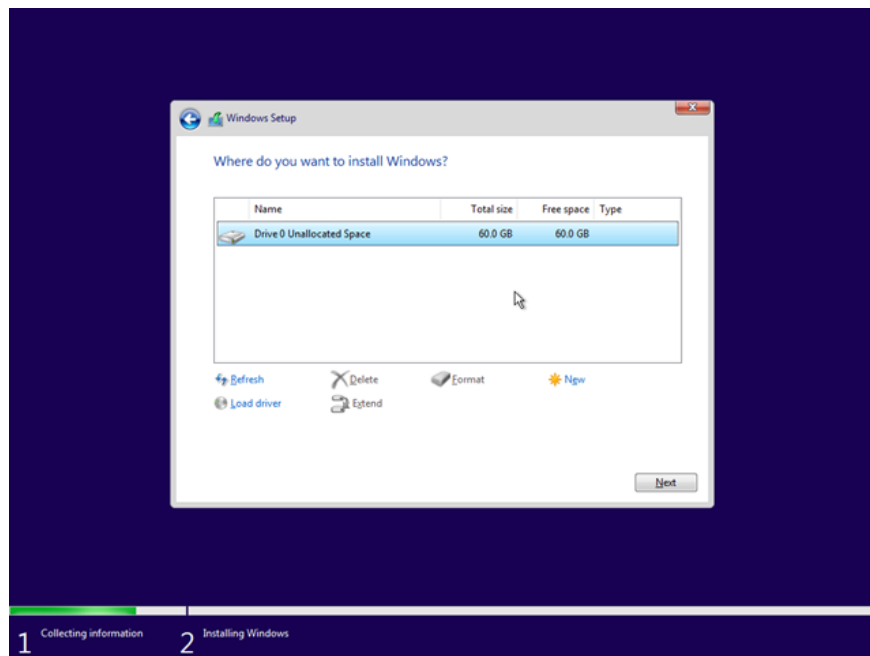

B6: Select Custom if you want to install a new Windows 10, select Upgrade to upgrade from the old version to the new version while preserving the previous files and software.

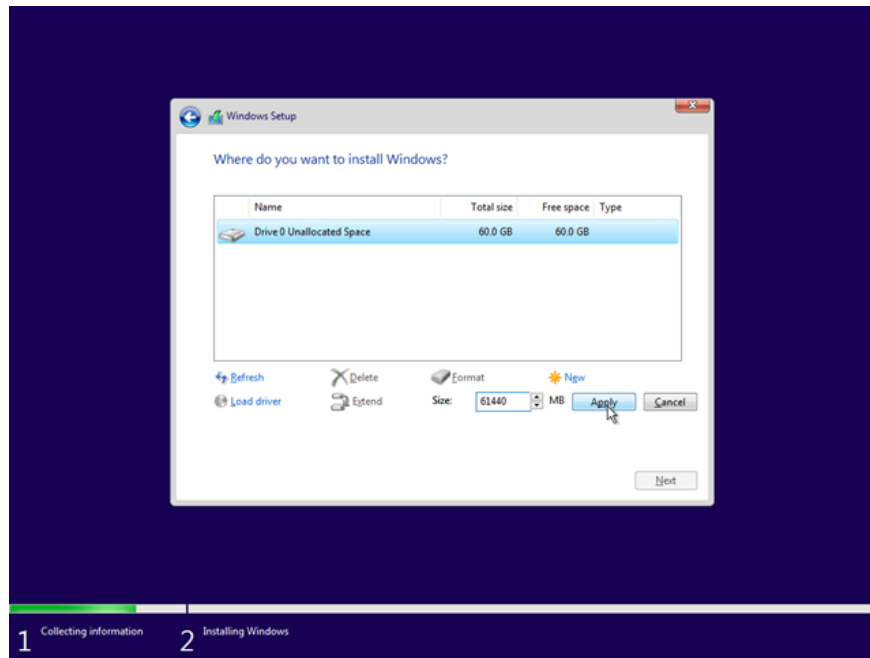

B7: Select the drive where you installed Windows. Remember, this drive will be formatted after installing Windows 10. You must select the correct drive to install, if selected wrong will cause the computer to lose data.

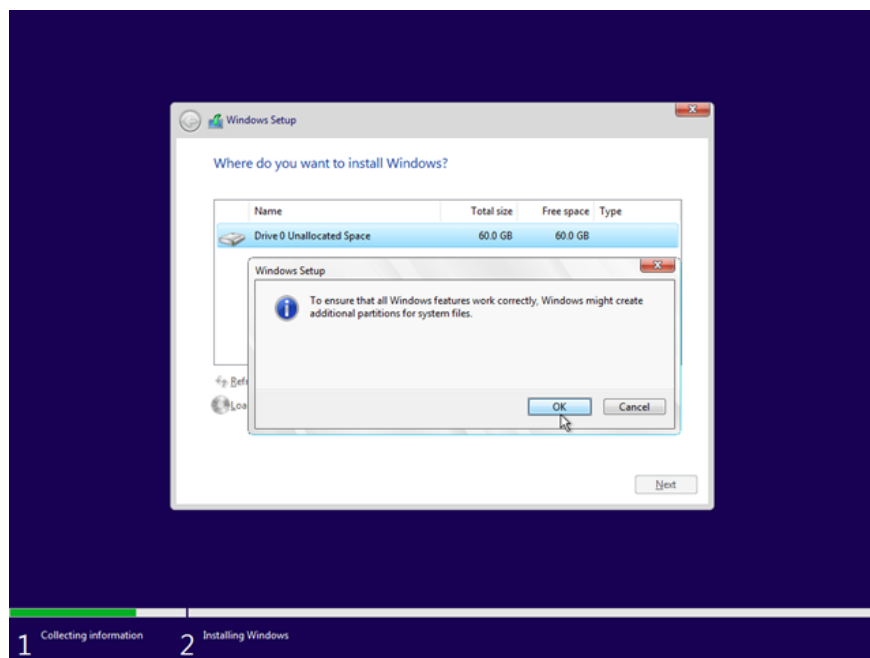

After selecting the drive, click New to create a new partition.

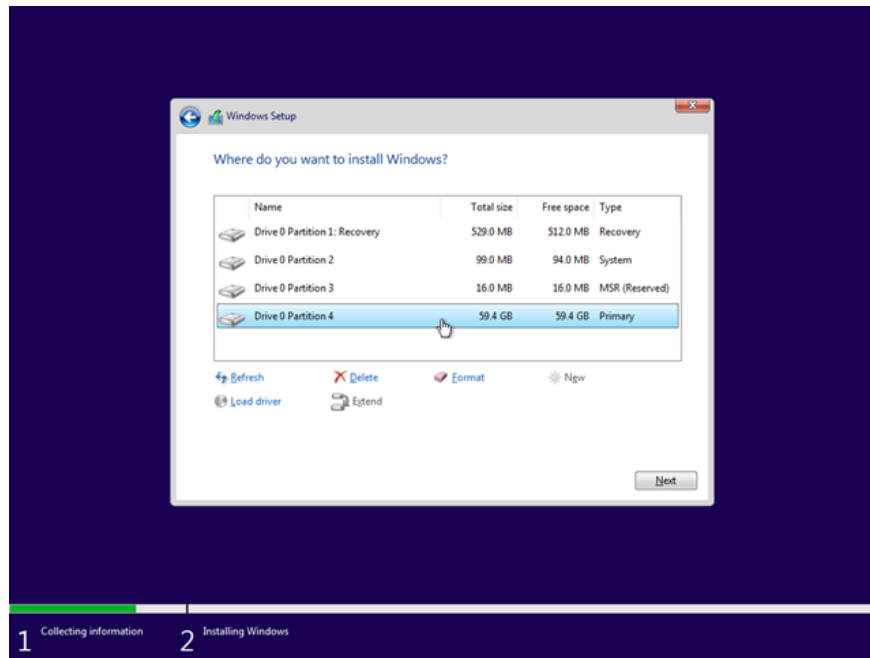

Enter the amount of space to create (1024 MB = 1 GB). If you want to create a drive containing the 60 GB operating system, enter $1020 * 60 = 61.4040$ and press Apply to save.

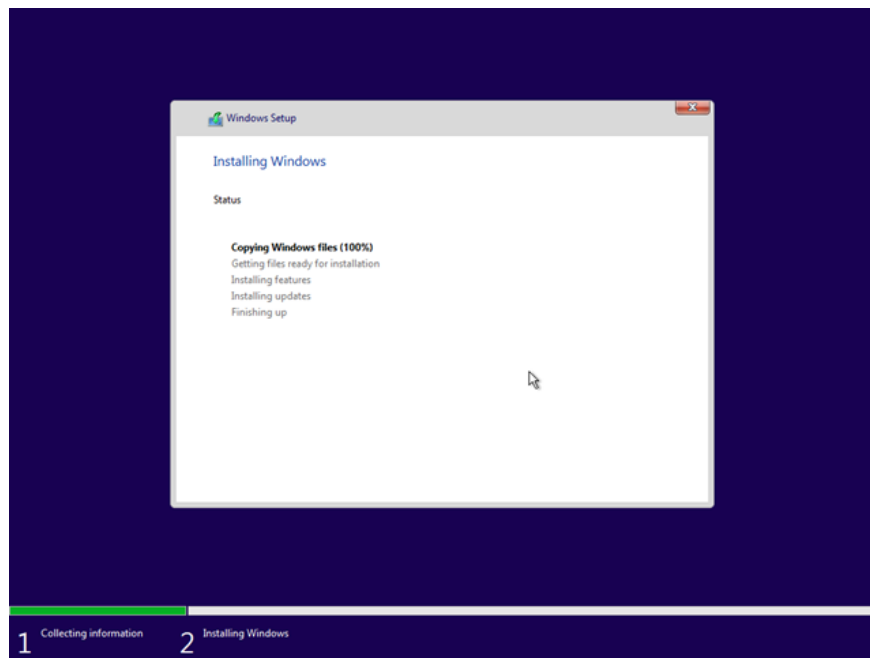

In some cases you will not be able to press New. At this point, you can press Format to delete the partition before installing Windows. The system will ask if you want to delete all data in the area before Format or not? You must click OK.

At this point, the system will generate a lot of small but important partitions. You cannot delete them, select the partition where you want to install Windows 10 and click Next.

B8: The machine will automatically install Windows 10 for you.

B9: After finishing, the computer automatically reboots and asks you to set up some configurations such as language, movie table, use purpose .

B10: After completing all the above steps, the Desktop interface will display, everything is complete here.

Note: After installing Windows 10 with USB Boot, try connecting your device to a Wifi network to download Driver updates, software, security patches . This is essential for your device to work. Smooth operation, more efficient.
