1. How to create USB Boot to install Windows 10

1.1 Download the standard Windows 10 ISO file from Microsoft

First, you need the latest version or download Win 10 directly on TipsMake via the link below.

- Download link

1.2 How to create Windows 10 installer on USB (USB BOOT Win 10)

After you have the Windows 10 ISO file and USB, you need to install the USB so that it can contain the Windows 10 installer. Refer to the article below to Know how to create a USB containing the Windows 10 installer.

- Detailed steps to create an installer from USB, you can follow and follow in the article.

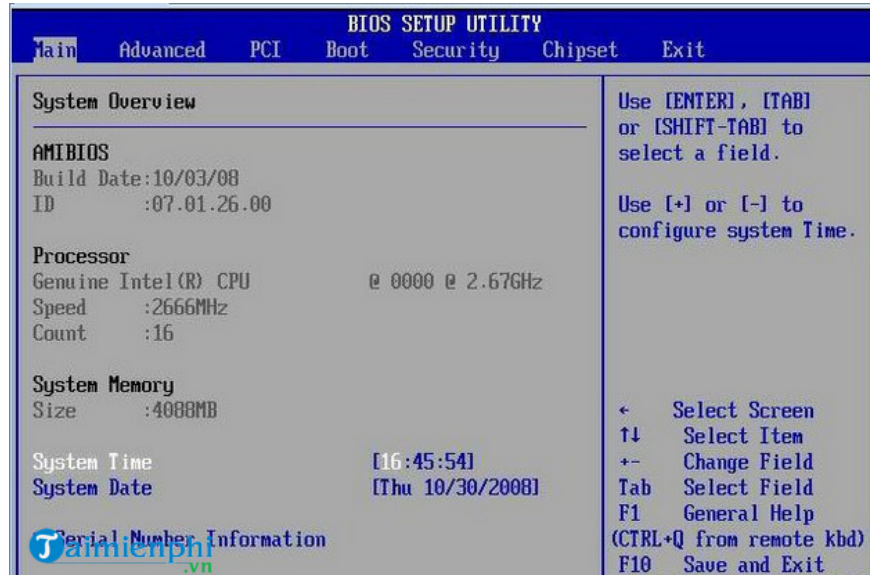

1.3 Set up BIOS to install Windows 10 using USB BOOT

This step is necessary for some machines that do not automatically boot from USB. To adjust, go to BIOS by:

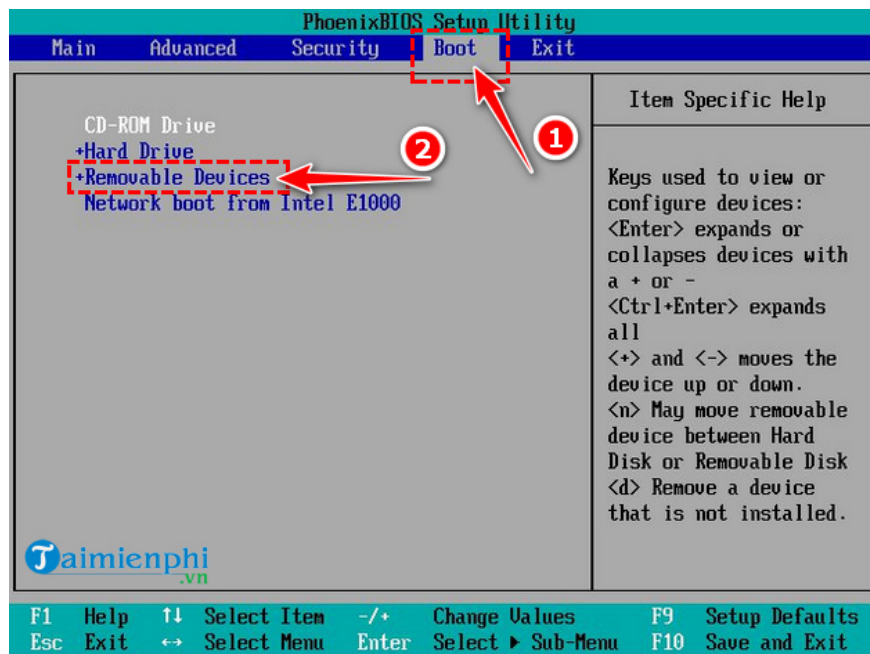

- ??When starting, press **DEL, F8, F10** . Note that this method depends on each different model, you can see how to enter the bios of popular **laptop models**. Now here, it will appear at startup so anyone with sharp eyes

will see it. After entering the BIOS, go to the section to select the boot order to load the operating system from USB.

To be able to adjust the Bios to boot from USB or DVD/CD to install Windows to enable the ability to boot into the operating system from the first USB, CD/DVD, please refer to the instructions for **adjusting the Bios to boot from USB or DVD/ Windows installation CD** for all computer models to do this.

After understanding the shortcuts to move in Bios mode on your computer, move to the **BOOT** tab --> Then select **Removable Devices** (On some other models it is also called USB Storage Device or External Drive)

2. How to install Windows 10 using USB BOOT in detail

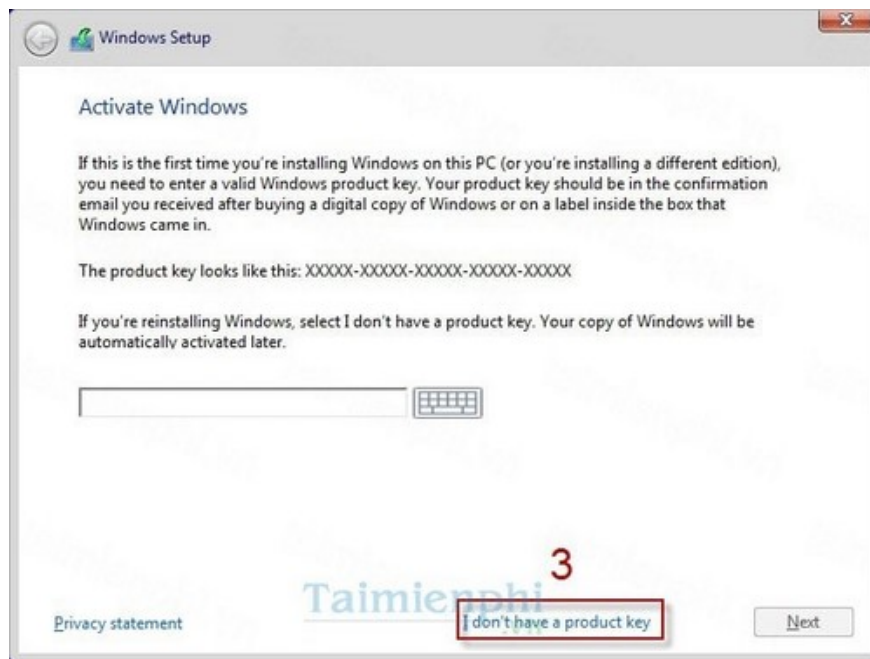

Step 1: Set the time and keyboard, then click **Next**

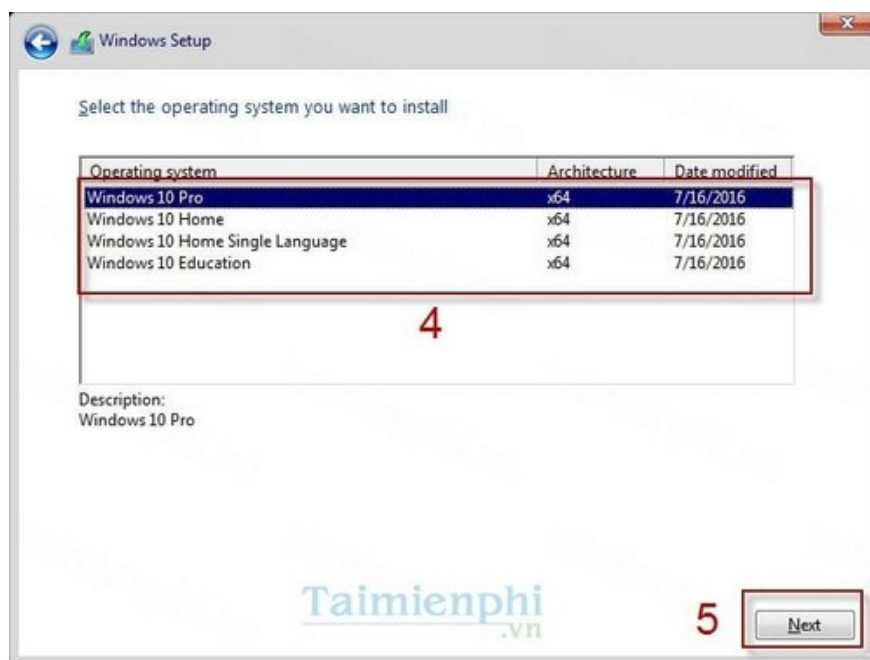

Step 2: Click **Install now**

Step 3: Click **I don't have a product key**

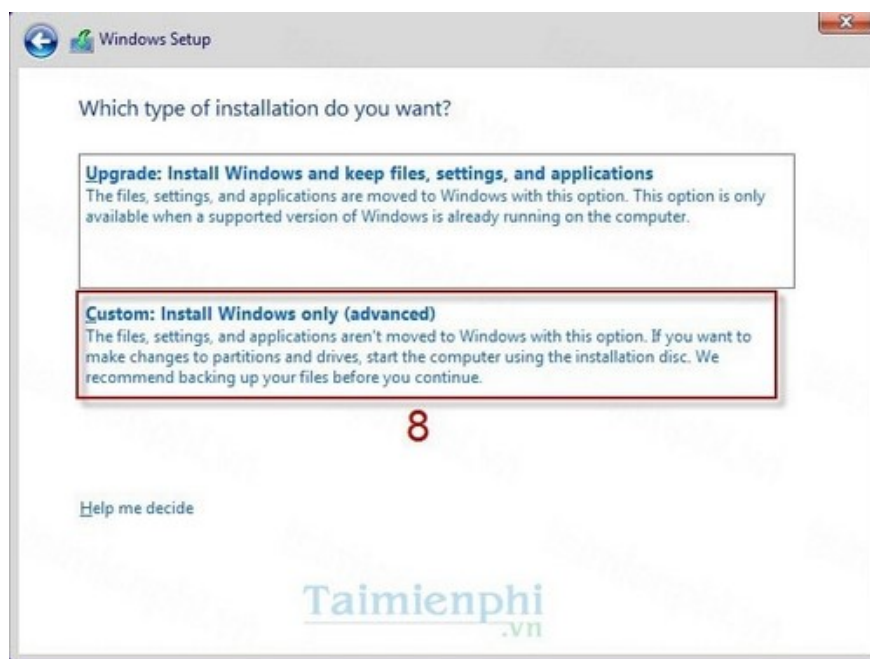

Step 4: Select the Windows 10 operating system you want to install, then click Next.

Step 5: Check **I accept the license terms** then click **Next**

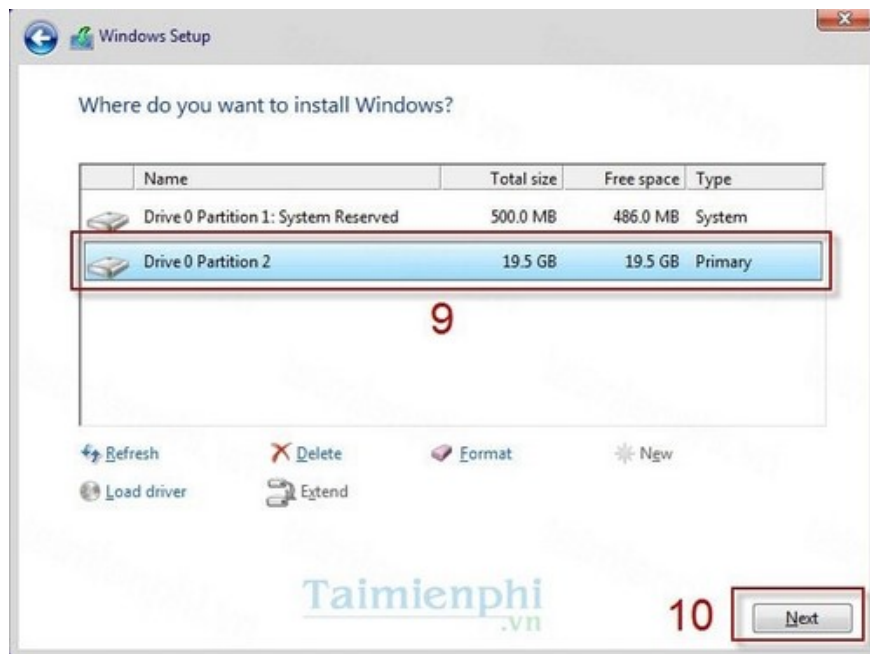

Step 6: Select **Custom: Install Windows only (advanced)**

Step 7:

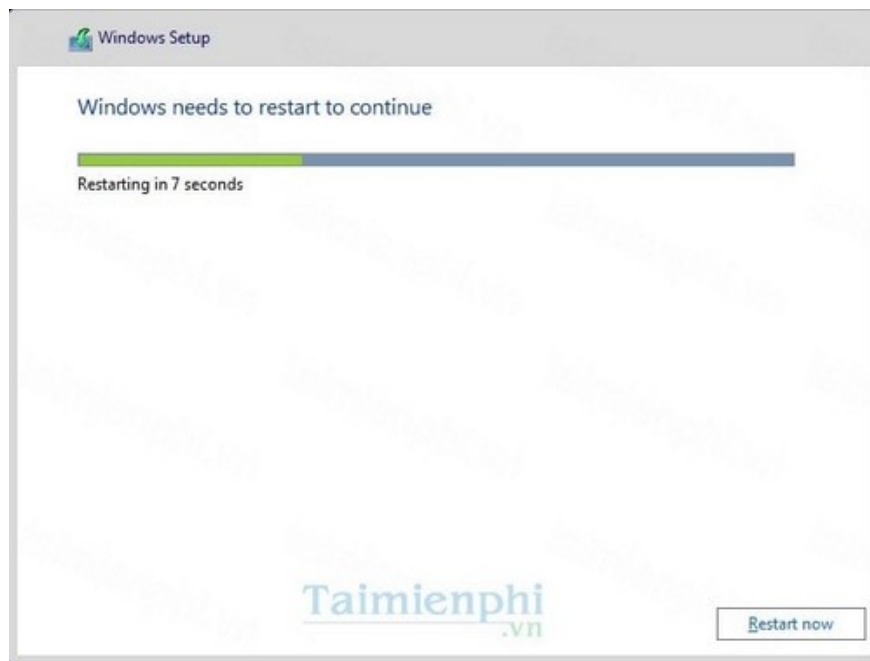

- To reinstall Windows 10: Select the drive to install, then click **Format** to delete all old data on the drive where Windows is installed and finally click **Next** .
- For new installation of Windows 10: Select the hard drive you want to install the operating system on, click **Next**

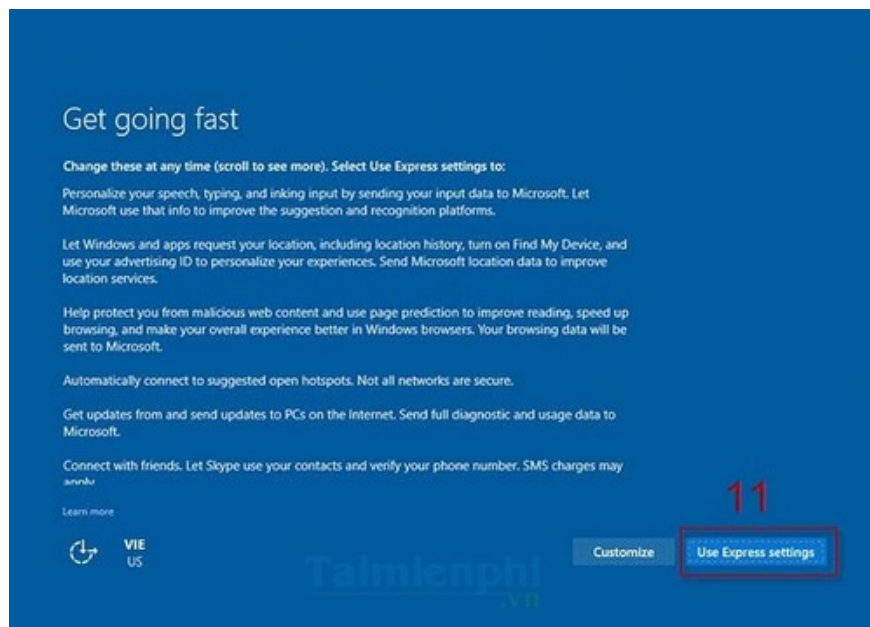

Step 8: The installation process will take about 10-15 minutes depending on how fast or slow your computer configuration is.

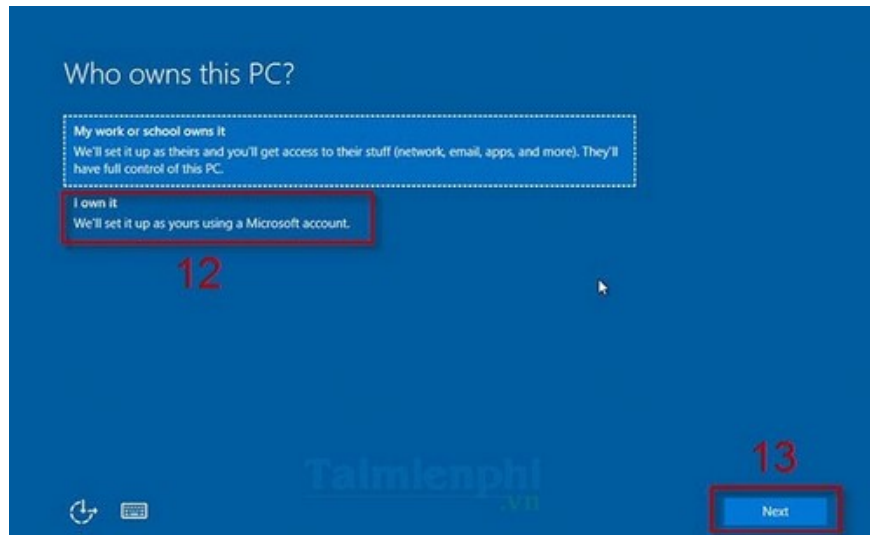

Step 9: After installation is complete, the device will reboot and return to the first-use setup screen.

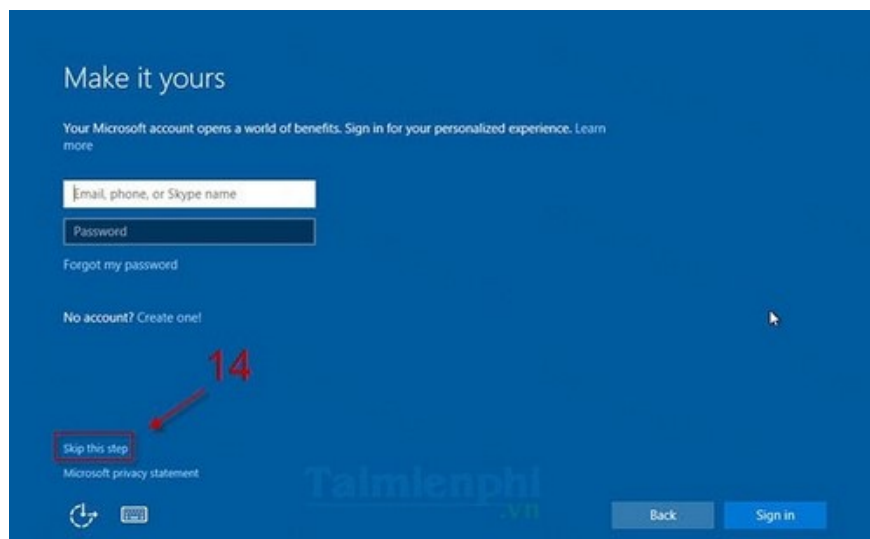

Step 10: Click **Use Express settings** to automatically set up the device for the first time use, click **Customize** to customize the settings yourself.

Step 11: Select **I own it** then click **Next**

Step 12: Click **Skip this step** to skip the Microsoft account login step

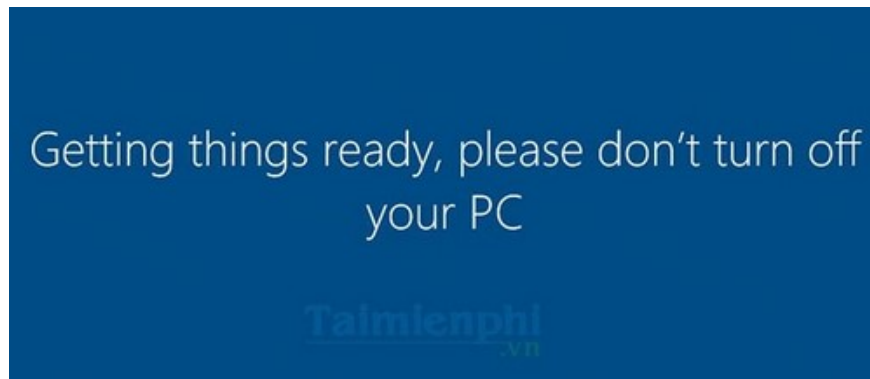

Step 13: Create a login account and login password for your computer

Step 14: Click **Not now** to temporarily skip using Cortana virtual assistant

Step 15: Wait a moment for the device to set up for the first run, do not turn off the device during this time.

And now you can use **Windows 10** on your computer

3. Common errors when installing Windows 10 using USB BOOT

3.1 Error Required CD/DVD drive device driver is missing.

- The cause of this error may come from: The Windows 10 installation file is corrupted, the USB was removed during the installation process, the drive on the installation computer Windows 10 cannot read data. Taimienphi.vn has an article with detailed instructions on how to fix this problem. You can refer to how to **fix Required cd/dvd drive device driver is missing error** to fix.

3.2 Error of not being able to create USB Boot

- The cause of this problem is because the autorun file when installing USB Boot has a capacity of 0KB. If the USB Boot is successfully created, this file will have a capacity of 1KB. To fix it, you need to turn off the program and anti-virus software installed on your computer, then recreate the USB Boot.

3.3 Error of not being able to enter BIOS

- Each computer has different shortcuts to enter BIOS mode. If you cannot access this mode, you need to immediately refer to how to **enter the bios of laptop computers** to find the brand you are using to reinstall Windows 10.

3.4 Error The selected disk has an MBR partition table

- This error occurs when you create an incorrect USB Boot. For example, if your computer has the Legacy format but you create a UEFI USB Boot, you will encounter errors and vice versa. To fix the error, follow the steps in the article **Fixing The selected disk has an MBR partition table error** to fix it.

After installing Windows 10 as well as upgrading from lower operating systems, if you are not satisfied, you can downgrade Windows 10 to Win 7 or 8.1 to return to using your old operating system.
