

# Instruction to change Lotus account password

Changing your Lotus account password should be done regularly if you use the Lotus web version when sharing a computer with other people. Or use on the mechanism to save web passwords

Lotus social network allows users to use two forms of account registration. One is that you can use your email account to register for a Lotus account, and the other is to use your phone number. More specifically, you can log in to Lotus without a password.

However, when you log in without a password, you will have to use a new OTP every time to log in to the application. As such, security is more assured. For accounts that use a password to log in, you need to change your password every few months, see the steps below to change your Lotus account password.

1. What is the token on Lotus, how to use it, how to use it, and how to earn it?
2. Special content tools and formats on Lotus, helping users create the best content
3. How to change your Gmail password on your computer

## How to change your Lotus account password

To change your Lotus password, go to your Lotus **account** 's **Personal** interface, click the **Settings** icon in the upper left corner. Then select **Manage password** .

Next just write down the old password you are using for the Lotus account above, write down the two new passwords below and click **Reset** . There will be no notice that you have successfully changed your password, so you must log out of your Lotus account and then use the new password to log back in and test it.

Changing passwords usually happens only when you share a computer with someone, but the above browser has a mechanism to save the password yourself. Or when using and forgetting to log out of an account on someone's computer, it will be more convenient on your phone when you can just use the OTP code to log in, and if you use a password, it will also be saved on application.
