

Instructions for adjusting the computer screen to a smaller size on Windows and Macbook

Zooming in and out of Windows and Macbook computer screens helps you adjust the screen size to suit the user's needs. To adjust the computer screen to a smaller size or make it larger, readers can refer to the instructions shared in the article below.

Normally, when encountering a situation where the computer screen is large, small, or unusual, users will think about changing the computer screen resolution. However, in addition to changing the screen resolution, there are some other tricks on computers to **adjust the computer screen to a smaller size** that you need to know.

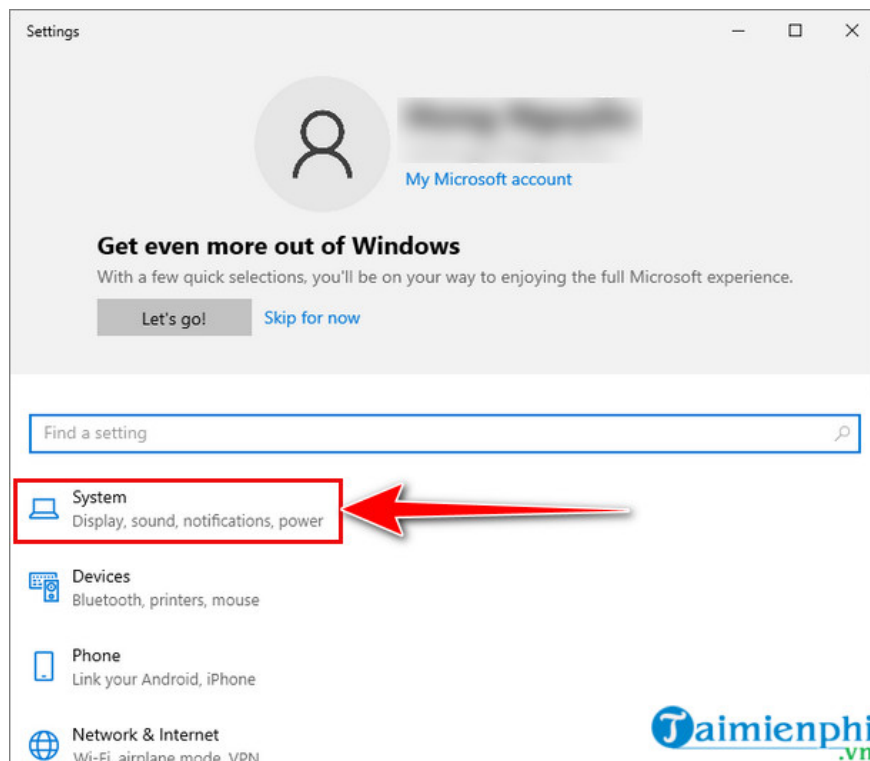

1. Make your computer screen smaller with keyboard shortcuts

When you notice that icons or content displayed on your computer screen is larger or smaller than usual, you can use the keyboard shortcut **Ctrl + Shift + scroll up and down** to customize the zoom. /minimize the computer screen.

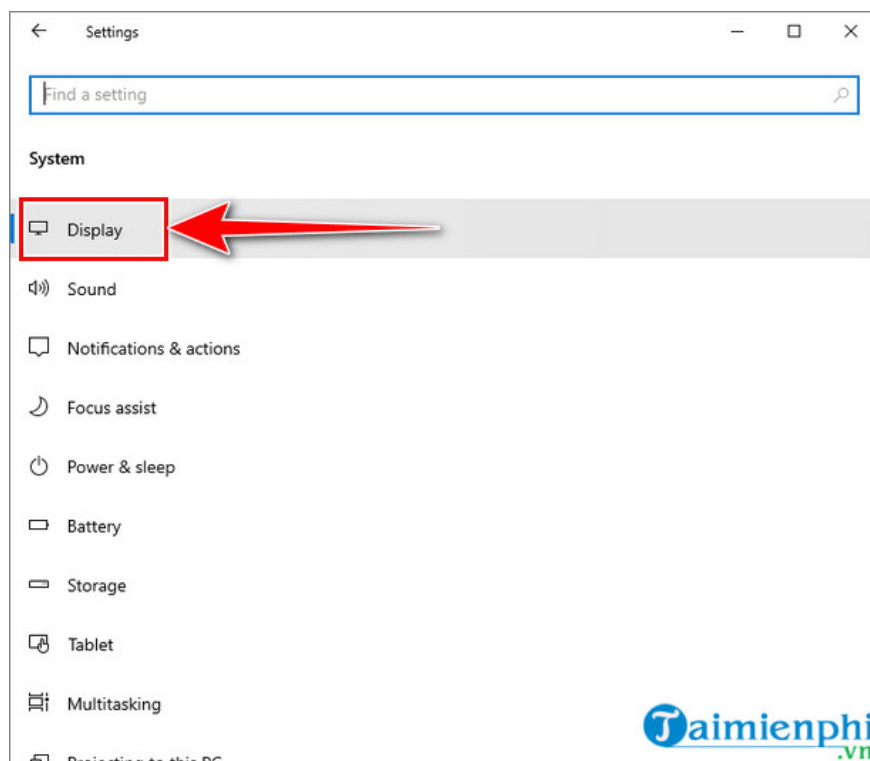

2. Adjust the computer screen to a smaller size using the Custom Scaling tool

Custom Scaling is a utility tool built into Windows, allowing the computer screen to display a larger scale than the original standard size. Maybe while using it, you accidentally set this tool to a higher ratio than the original ratio, so you just need to adjust the computer screen to a smaller size by returning the Custom Scaling parameter to the original.

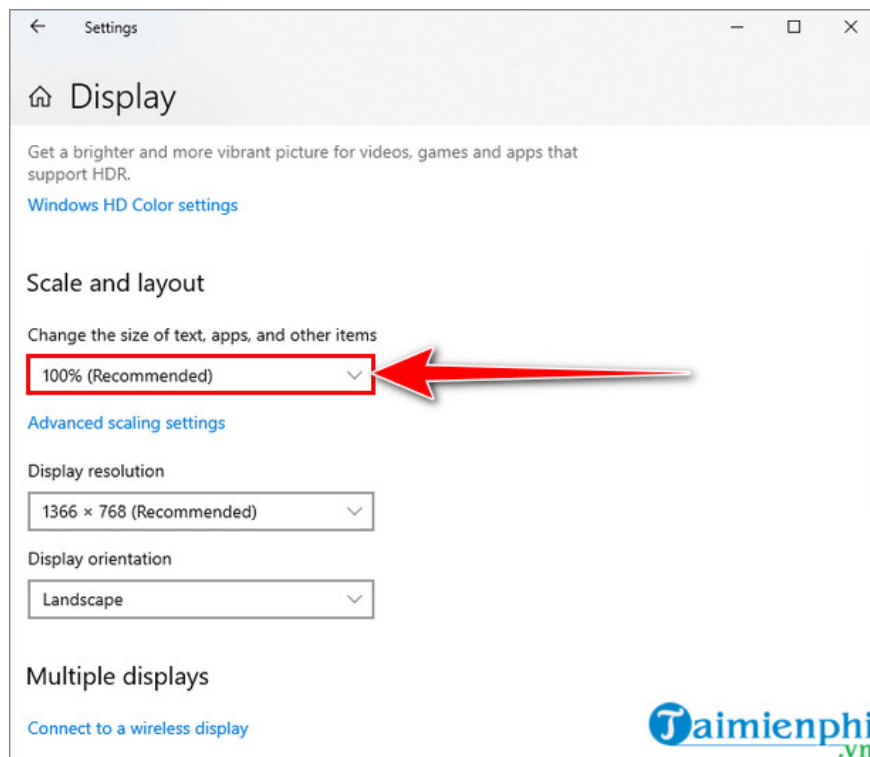

Step 1: Press the Windows + I key combination and select **System** . You can also right-click on the desktop and select **Display Settings** .

Step 2: Select **Display** .

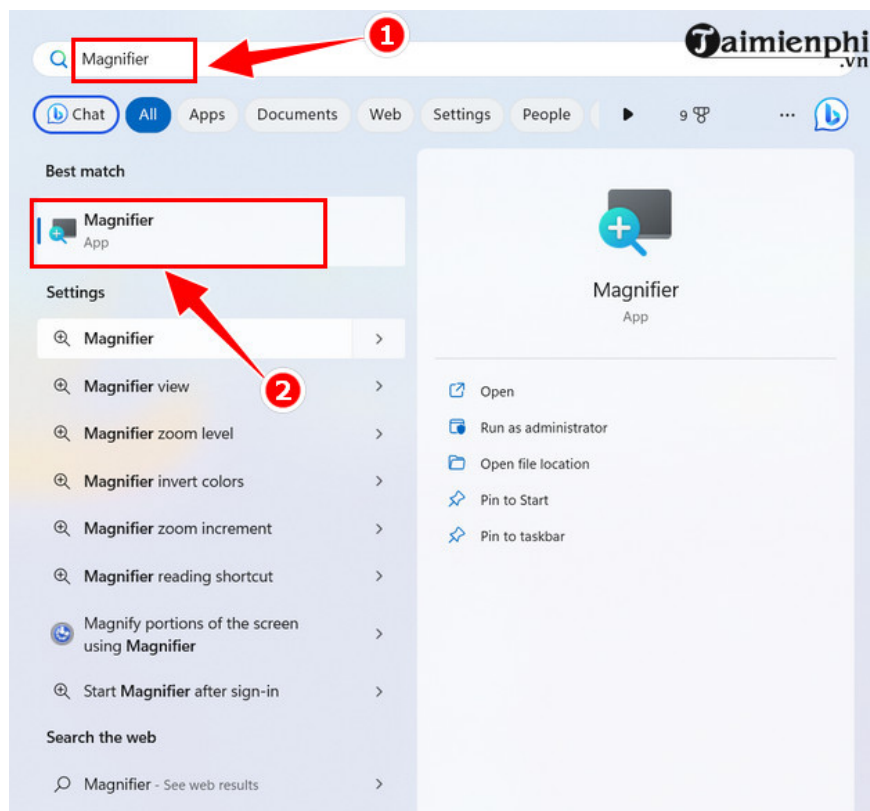

Step 3: Here, you adjust the parameters in the **Change the size of text, apps, and other items** section to **100% (Recommended)** to adjust the computer screen to a standard size.

3. How to minimize and enlarge the screen with Magnifier

Step 1: Click the Windows window icon on the taskbar => Enter Magnifier and select the app to use.

Step 2: To use Magnifier to zoom in and out on the screen, do the following:

- **Zoom in:** Click the "+" icon to adjust the appropriate size

- **Zoom out:** To zoom out your computer or laptop screen, press the "-" button.

4. How to minimize and enlarge the screen on Macbook

Method 1: Use the keyboard shortcut Command + or -

To use the zoom in and zoom out feature on a Macbook computer, you first need to activate this feature by pressing the key combination **Option + Command + 8**.

Once the zoom feature on your Macbook has been activated, you just need to follow these steps:

+ **Zoom out:** Press the key combination **Option + Command + Sign "-"**

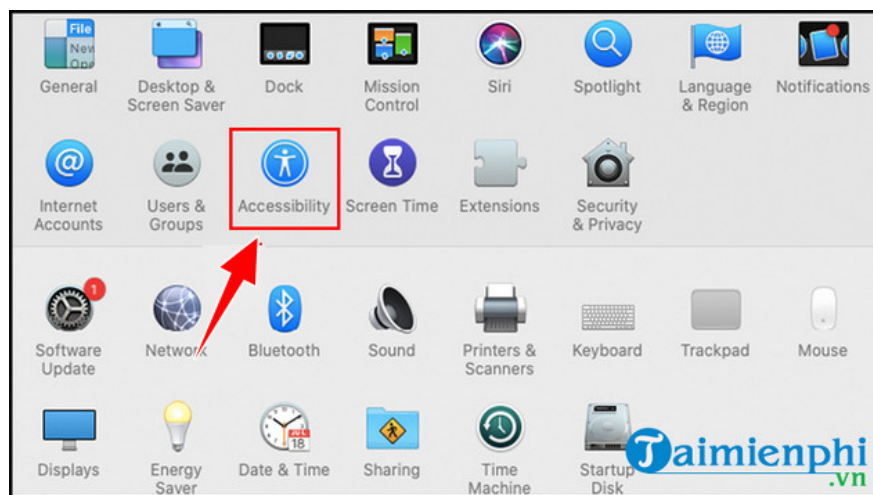

+ **Zoom in:** Press the key combination **Option + Command + "+" sign**

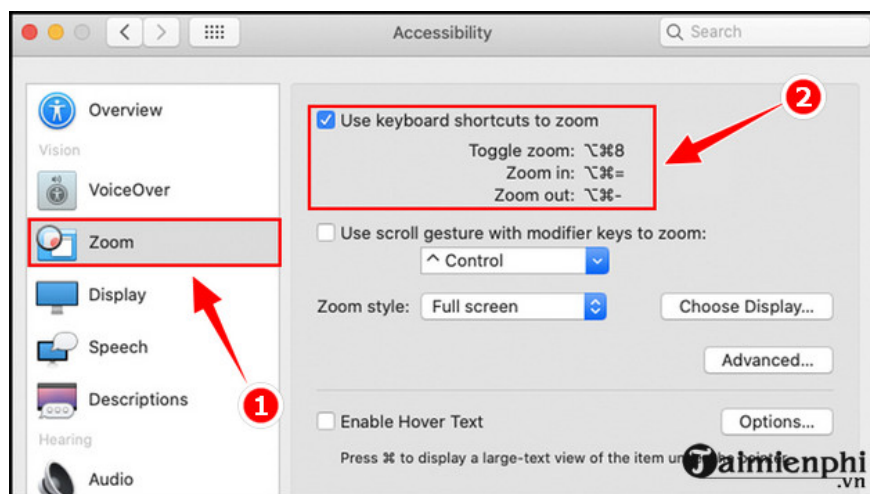

Method 2: Use the zoom feature in settings

Step 1: Go to System Preferences => **Click Accessibility** .

Step 2: Here you search for **Zoom** => Select **Use keyboard shortcuts to Zoom** to open zoom in and out with keyboard shortcuts.

Thus, with just a few simple steps, you can zoom in and out of your computer screen at will to see the displays on the screen more clearly and control them more simply.

Thus, TipsMake has introduced to readers the fastest **ways to adjust the computer screen to a smaller size** so that you can fix the problem of the display screen being too large, causing a lot of discomfort when using the computer. Black screen errors on computers are also common errors due to many reasons coming from the system, computer hardware or simply the power cord.
