

Instructions for blocking evaluation requests in applications

No matter which operating system you use - Android or iOS, there are applications that pop-up asking for ratings or reviews. If you want to turn off these annoying pop-ups, read the details in the post!

No matter which operating system you use - Android or iOS, there are applications that pop-up asking for ratings or reviews. Some applications that provide the Never option will prevent similar requests from appearing in the future, but most do not have this feature. In that case, you only have to choose **Yes** or **Remind Me Later**.

Of course, the second option will cause the application to continue to pop-up on subsequent visits. If you want to prevent this pop-up from appearing, TipsMake.com will guide you in a very simple way.

Select **Yes** as if you want to rate or rate the app. When the App Store or Google Play Store opens, simply click **Back** or close the page. The store will remember that you clicked Yes and did not ask you to rate it again.

However, you may find that the pop-up appears again when the application is updated by developers who often require reviews on each of the latest versions.

If you regularly use an application, you should take some time to honestly evaluate. This is also a way for new users to have a more accurate view of the application.
