

Instructions for calculating inches for TVs

How to calculate the standard size to choose for yourself the TV that best suits your needs.

1. What are POLED and AMOLED - Opinion about the difference between these two types of OLED technology
2. Is it really economical to unplug the TV?
3. How to use 4K TV as a computer screen

When buying a TV next to the price, the brand size is also a problem that many people care about the most. However, many people do not know how to calculate the TV inch properly, because our unit of measurement is centimeters, not inch units. Therefore, in this article, we will show you how to calculate the standard size to choose the best TV for your needs.

To choose the right size TV you want, the first thing you need to understand is how to change inch to cm. These are considered the two most popular units of measurement around the world, so changing inches to centimeters is a must if you want to calculate the length of objects easily. When you learn how to convert, you will feel easier and more professional when you go to the store to buy a TV.

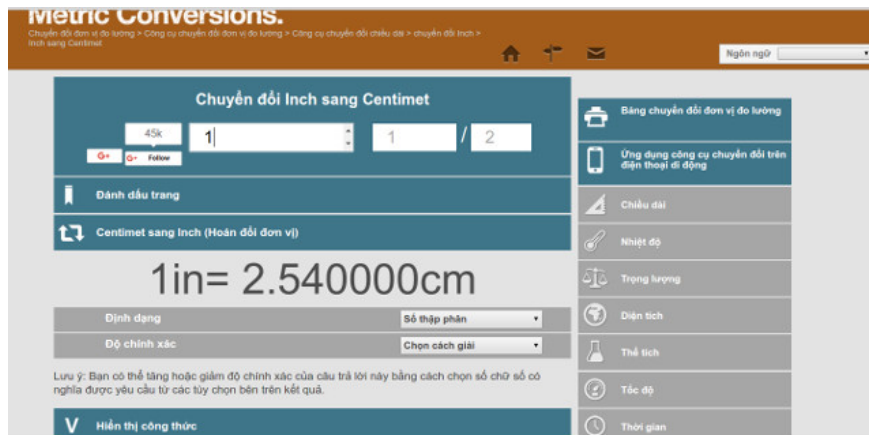

How is the TV size calculated?

The unit inch TV is not the length, nor the width of the device. That inch is the diagonal of every TV. Based on the inch of the TV, one can calculate the best distance from the screen to the eyes of the viewer to increase the efficiency and safety of use.

For example, a new 49 inch Smart TV, the number of inches is the diagonal connecting the two corners of the TV.

Compared to centimeters, the unit of measurement is much larger.

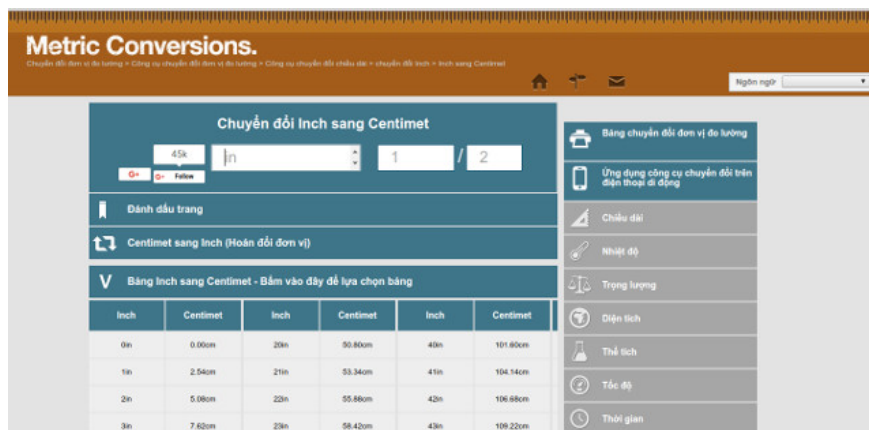

Example : 1 inch = 2.54 cm.

Therefore, if you want to convert a 49-inch TV to a Centimeter number for easy calculation, you must perform the calculation: $49 \times 2.54 = ?$

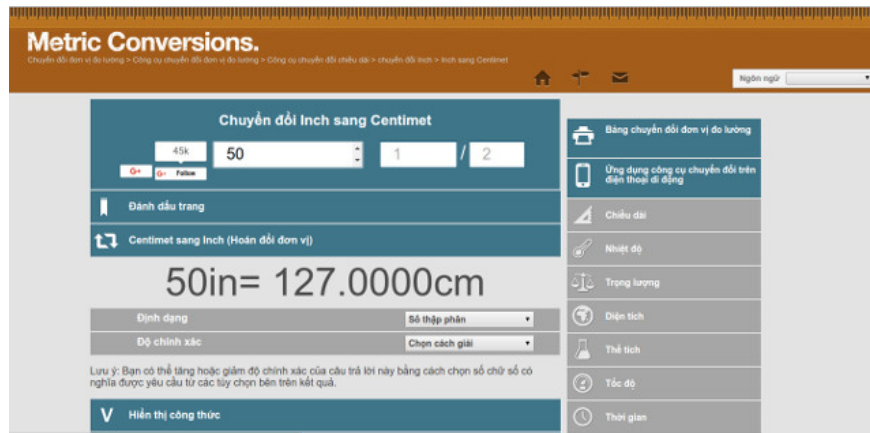

Today to convert inches to centimeters you do not need to use computers or mental arithmetic takes time, because on the Internet there are many online websites that support you to calculate and convert this unit. To convert inch TV to centimeter you can access [here](#) .

Step 1 :

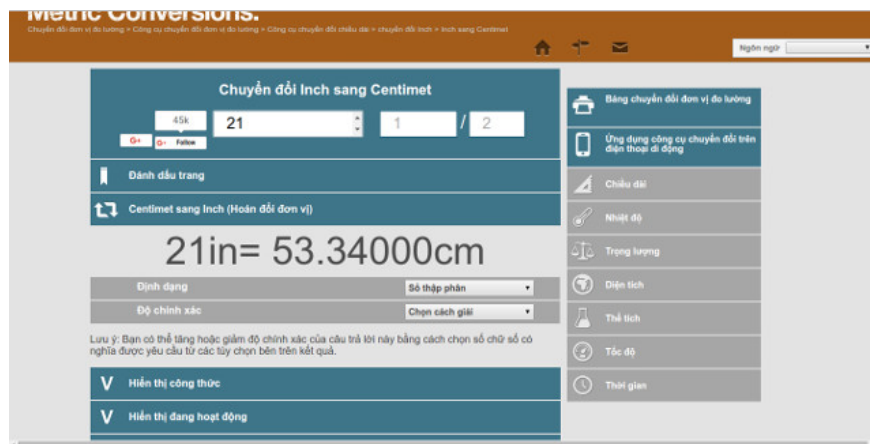

When visiting the website, you enter the number of inch TV you plan to buy.

Step 2 :

For example, you want to buy a 50-inch large screen Smart TV. Please enter 50 inches and the answer to be given quickly is 127.00cm. That is more than 1 meter.

Similar to the old 21-inch TV series, the number received is 53.34cm.

For larger TV models, you can also enter the number here to change the TV inch to cm. This method will help you be able to calculate the area of ??the TV to make it suitable for the area of ??your family. Like an area on a small shelf or a living room. For example, the living room is about 1m² wide, you can choose for yourself a TV about 49 to 50 inches will be suitable for the space as well as see the best quality.

Below is a unit of measurement from inch to centimeter for TV

Inches To Centimeters Conversion Table
