

# Instructions for cleaning the computer mouse properly

When doing routine cleaning for computers, many people often forget the computer mouse. This is a mistake by computer mouse as well as other electronic devices, after a period of use will be fouled, leading to difficult operation. Therefore, you should always clean it regularly.

When doing routine cleaning for computers, many people often "forget" the computer mouse. This is a mistake by computer mouse as well as other electronic devices, after a period of use will be fouled, leading to difficult operation. Therefore, you should always clean it regularly.

However, not everyone knows how to clean properly. Today, we will show you how to clean the mouse the best way.

## With a mouse

**Step 1 :** Press the lower lid lightly and turn it counterclockwise, then remove the ball from the mouse. Wash the ball with soapy water and dry it thoroughly.

**Step 2 :** Next, take a cotton swab so that you can wipe the scroll bars inside the mouse. During the cleaning process, if a hard object is caught, remove a nail or sharp object to let the mouse not get stuck. Also, clean the underside of the mouse.

**Step 3** : Reconnect the ball to the mouse and turn it clockwise.

## With optical mouse

Compared to a ball mouse, optical mouse hygiene is much simpler. You just need to use a cotton swab to clean or use a spray to clean the optical eye, then wipe the underside and contact surface of the mouse is done.

If anyone uses a **Bluetooth** mouse, remember to replace the battery periodically. When using optical mice, one should not use it on glossy surfaces as this will cause the mouse to move in the wrong direction.

1. Add Copy to folder and Move to folder in the right-click menu
2. Set up a computer mouse for left-handed people
3. Surf the web more effectively with the mouse wheel
