

Instructions for combining PowerPoint slides and videos

When watching the following clip, many people will realize that there is a perfect combination of slide shows and video presentations. So how to create such a combination?

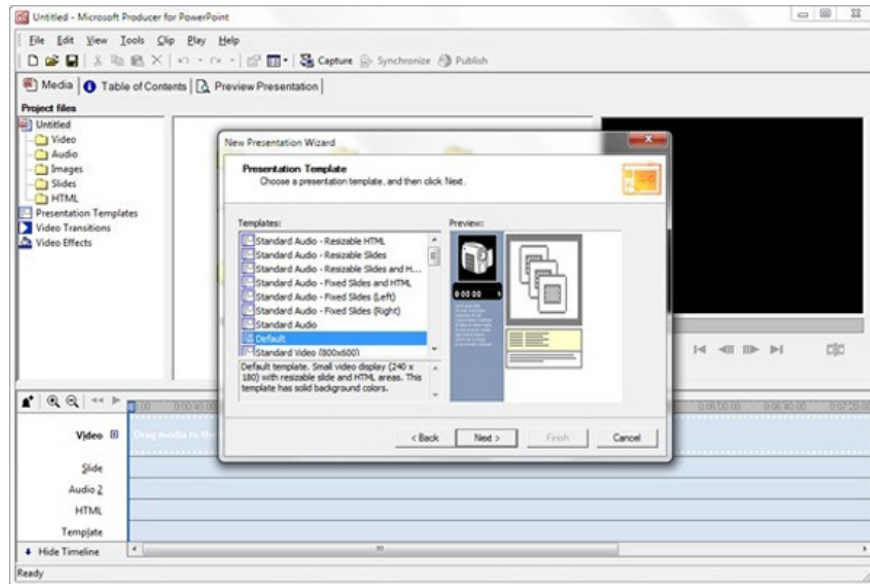

When watching the following clip , many people will realize that there is a perfect combination of slide shows and video presentations. So how to create such a combination? In the following article, we will cover some basic steps to sync PowerPoint slides and any video.

Normally, if you want to create a slideshow with the same effect, you will need professional editing and editing programs such as Adobe Premiere Pro or Apple Final Cut, replacing each frame and inserting. into the corresponding videos in the right proportion, size . these features cannot be done by free programs like Windows Live Movie Maker:

To get started, save each slide of a PowerPoint file into an image and import it all into your video editing program, changing the original size of the image to half that of the frame. Next, import the video under a separate layer, making it fit the other half of the frame. Besides, you have to pay attention to the duration and distance between the photos with the overall timeline so as not to deviate too much from the content of the video. Then, export the product file and upload it to your favorite sharing website, such as YouTube.

Besides, Microsoft Producer is a pretty good choice when you want to edit and store videos and slides right on your server. This tool requires users to extract images from the slide first, and then use the sync feature to combine with the video. The end result is an HTML file with a number of sample templates available:

On the other hand, if you use some web-based support tools such as Zentation, VCasmo and Knoodle, just upload the entire PDF or PPT format data, along with the sample video, and leave the real system Show all the rest of the process. Good luck!
