To combine these shapes, you first need to select them with the **Selection Tool** .

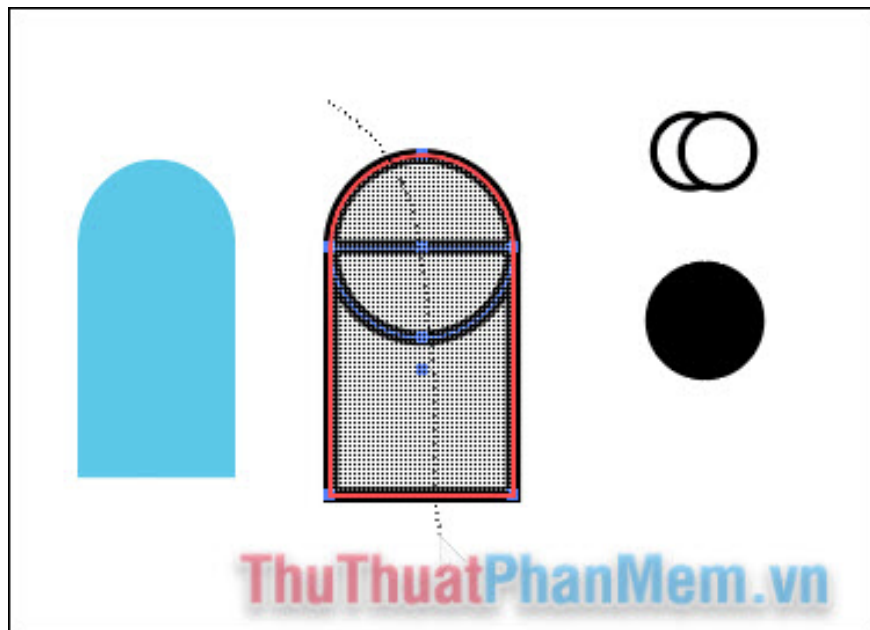

Drag and drop the mouse around the image to select all the content inside:

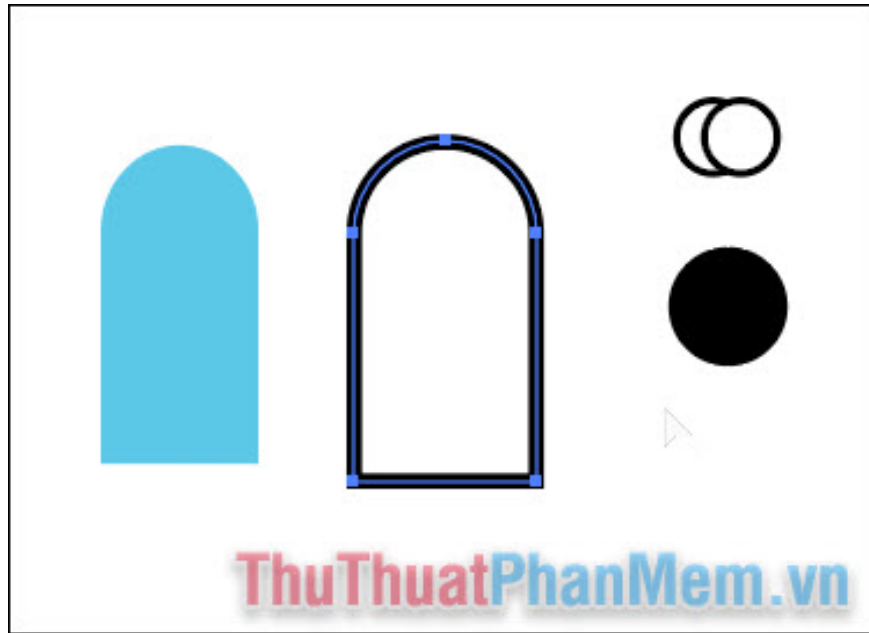

Select the **Shape Builder** tool (**Shift + M**) on the toolbar.

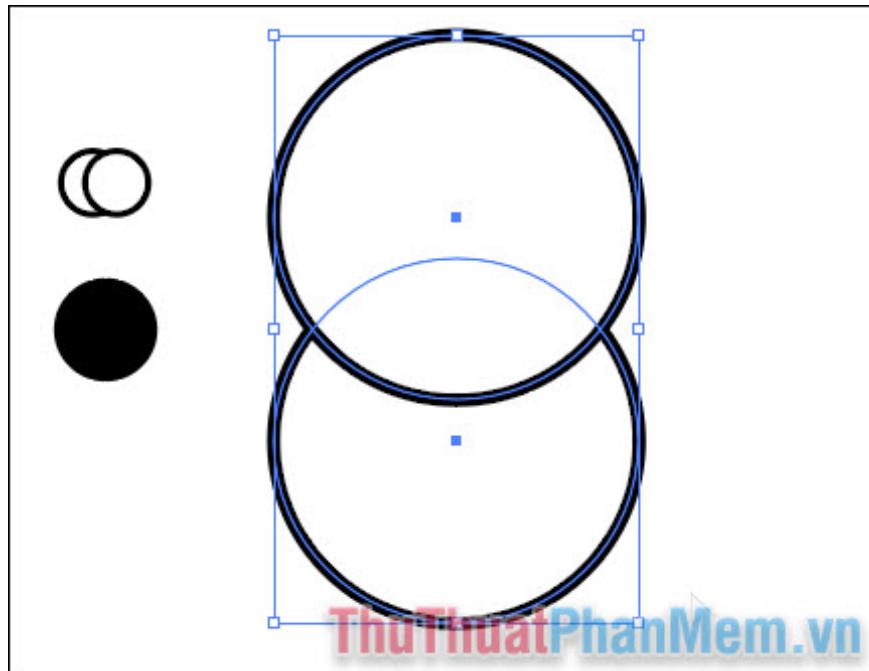

You drag and drop the mouse to draw any line going through the picture and they will be combined as follows:

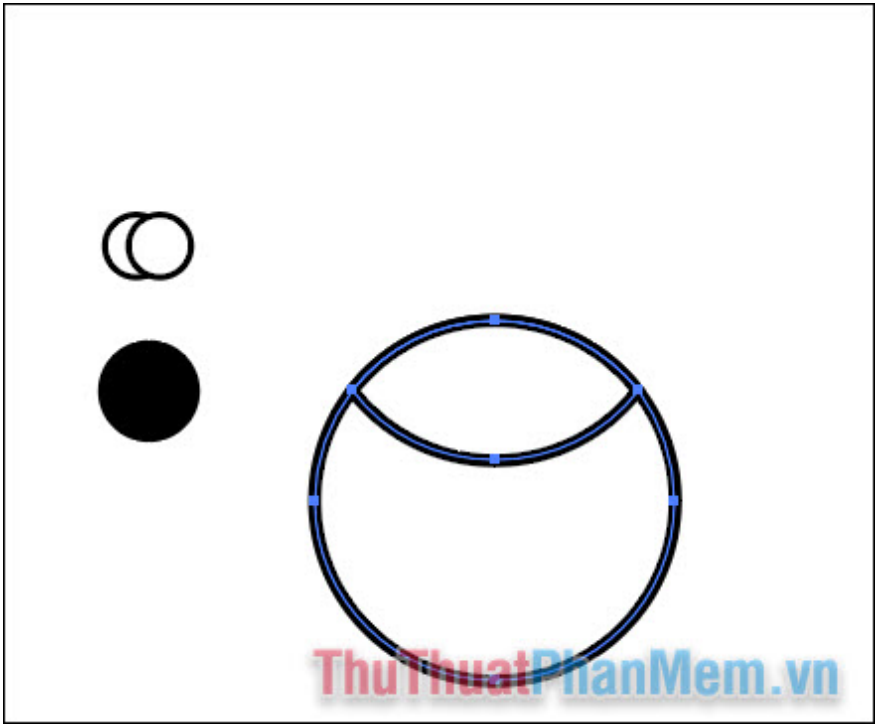

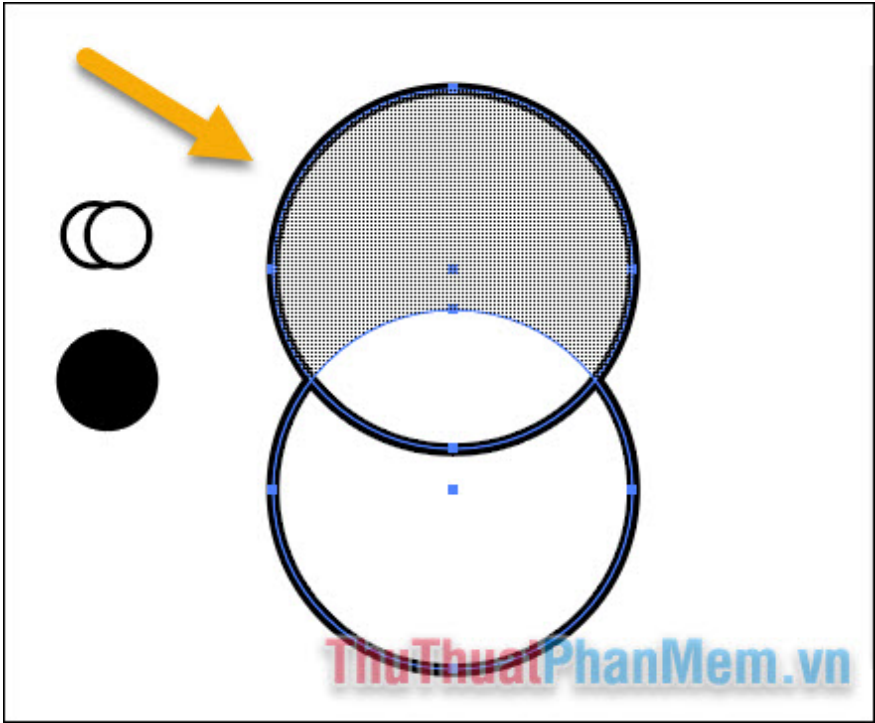

Next, you need to create an eye shape with the intersection of the two large circles. Continue using the **Selection Tool** to select them.

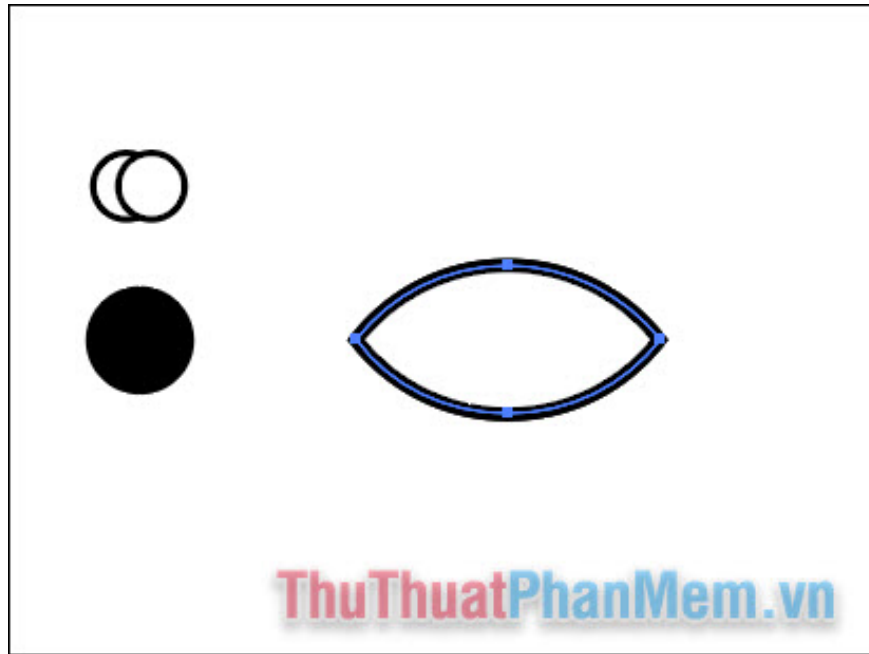

Switch to the **Shape Builder Tool** , to delete the leftovers, do the following:

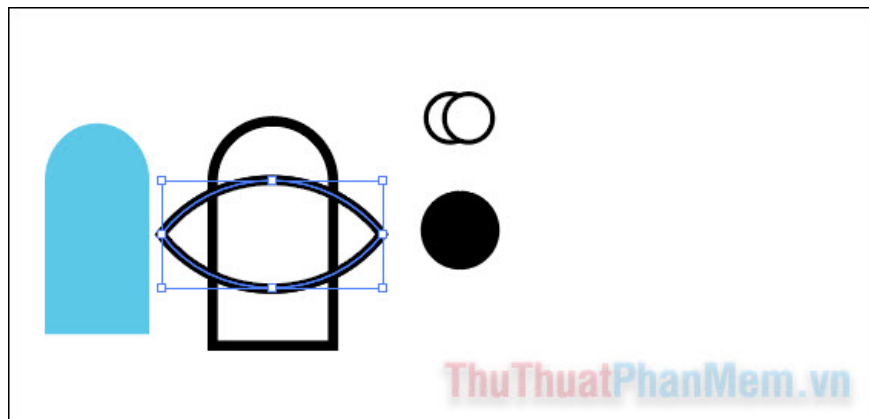

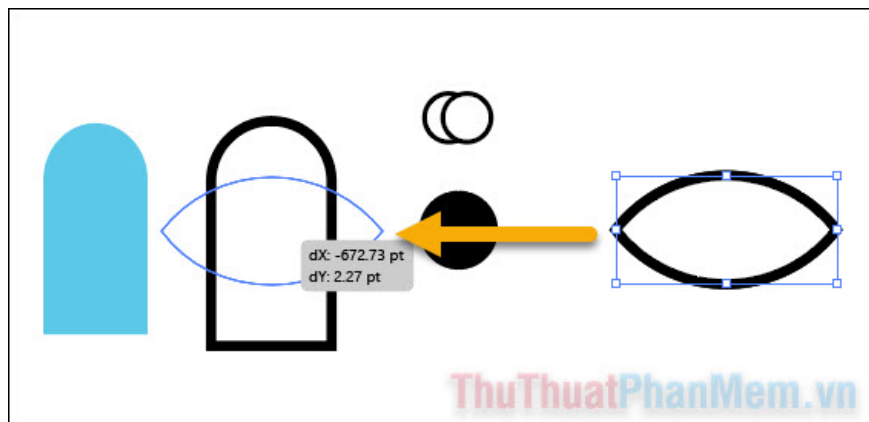

Hold **Option** for **Mac** or **Alt** key for **Windows** . Then put the mouse pointer on the redundant, you will see a small minus sign next to the cursor. Then click on the rest of the image and remove them.

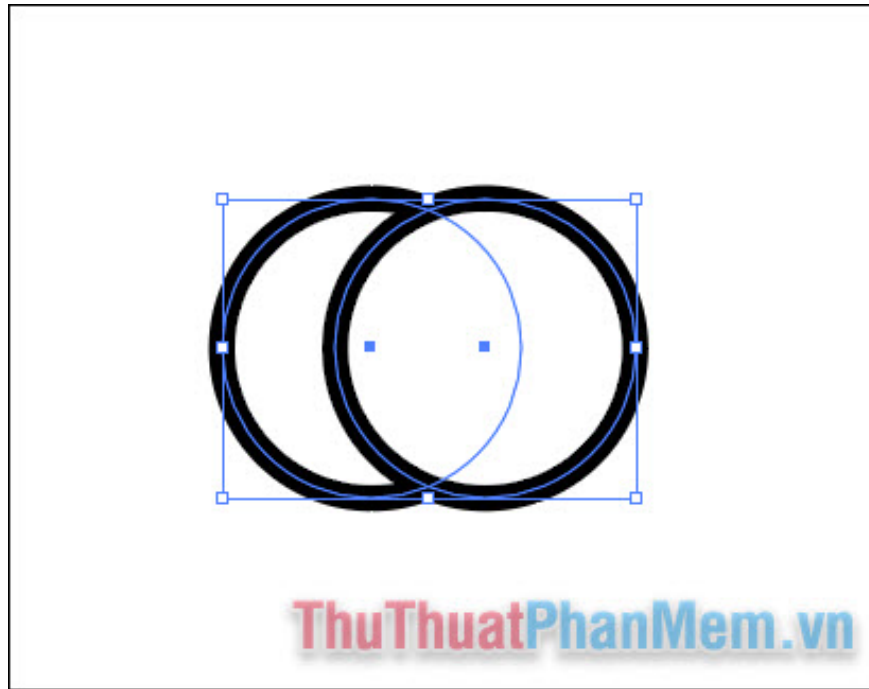

Do the same for the rest and you'll only have the intersection between the two circles.

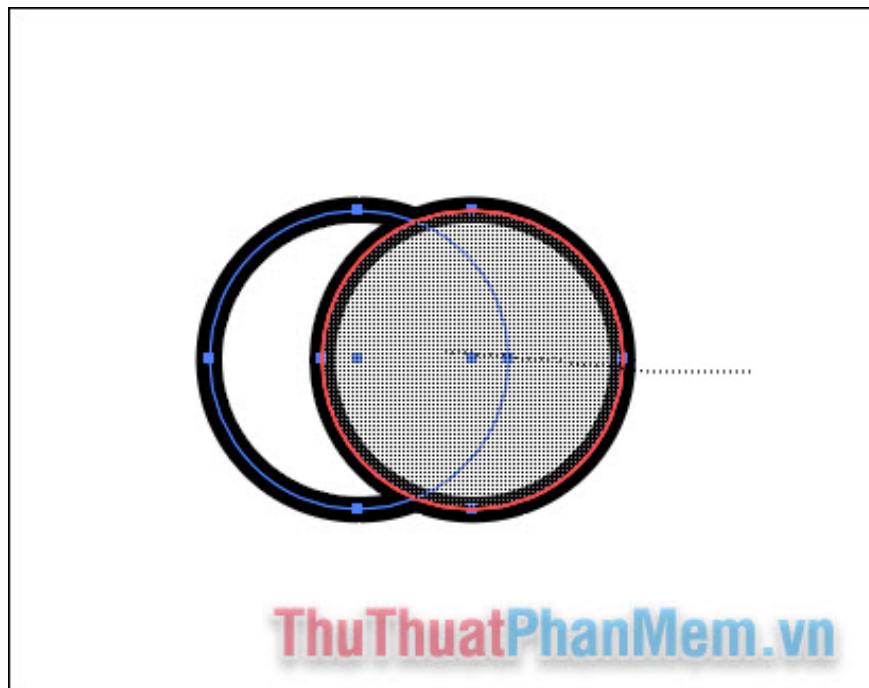

Next, use the **Selection Tool** to move the eye shape on the cylinder with drag and drop.

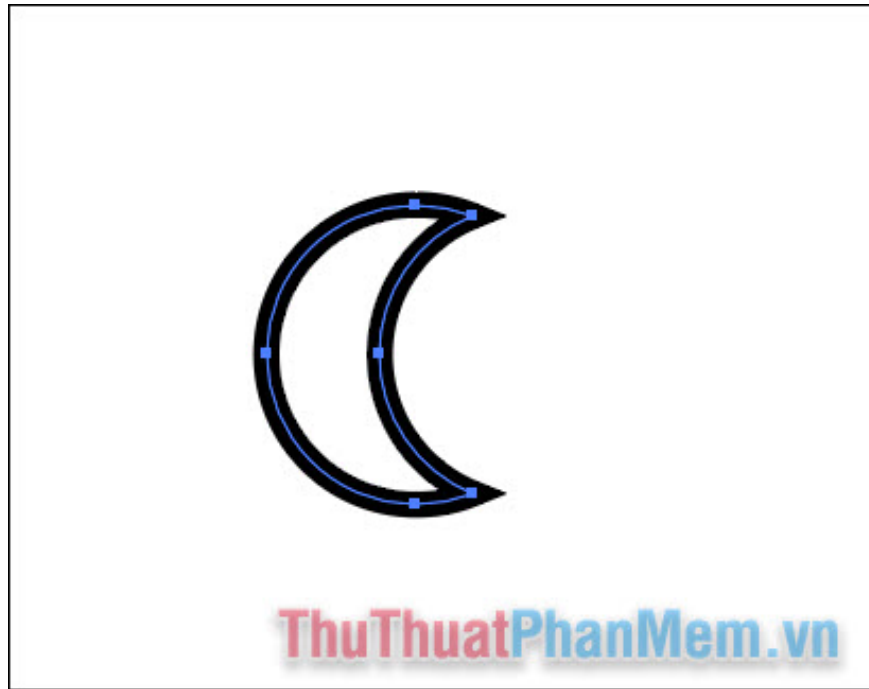

To cut the moon, pay attention to the two small circles placed on top of each other. Use the Selection Tool to select them.

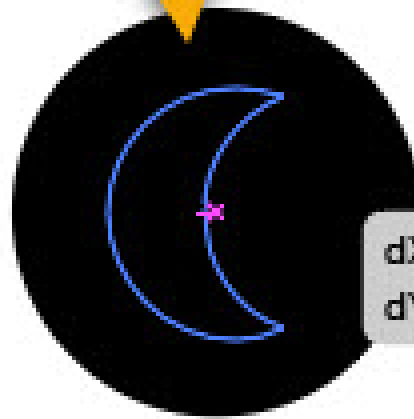

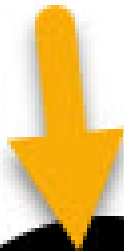

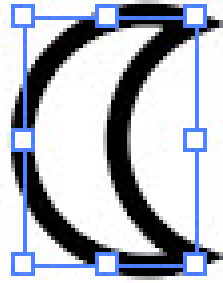

Pick the Shape Builder tool, hold **Alt** and let the cursor appear a minus sign, then drag a path through the parts you want to remove, then release the mouse. And your image has been cut.

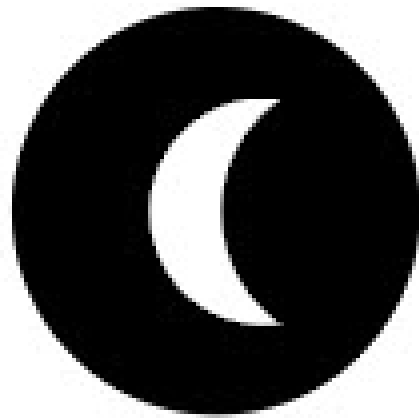

Use the **Selection Tool** to move the moon to a circular position with a black background.
