

Instructions on creating flashcards and quizzes on NotebookLM

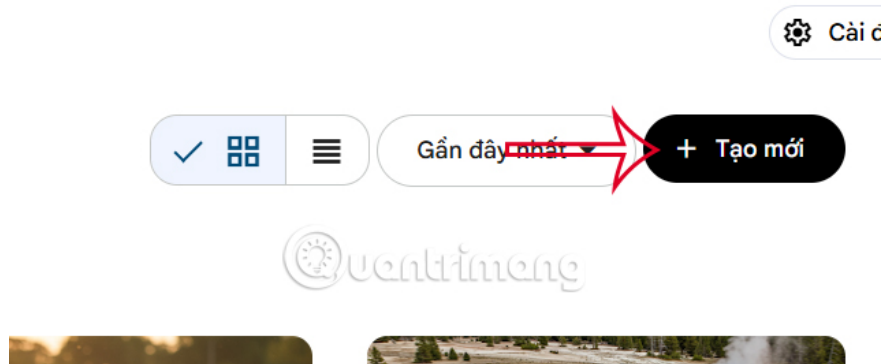

NotebookLM supports learners and teachers with two useful features: creating flashcards and quizzes.

NotebookLM has recently updated with two useful features: creating flashcards and quizzes. These two features are very helpful for teachers to refer to teaching materials and for students to review lessons using the content that NotebookLM helps create. Below are instructions on how to create flashcards and quizzes from documents in NotebookLM.

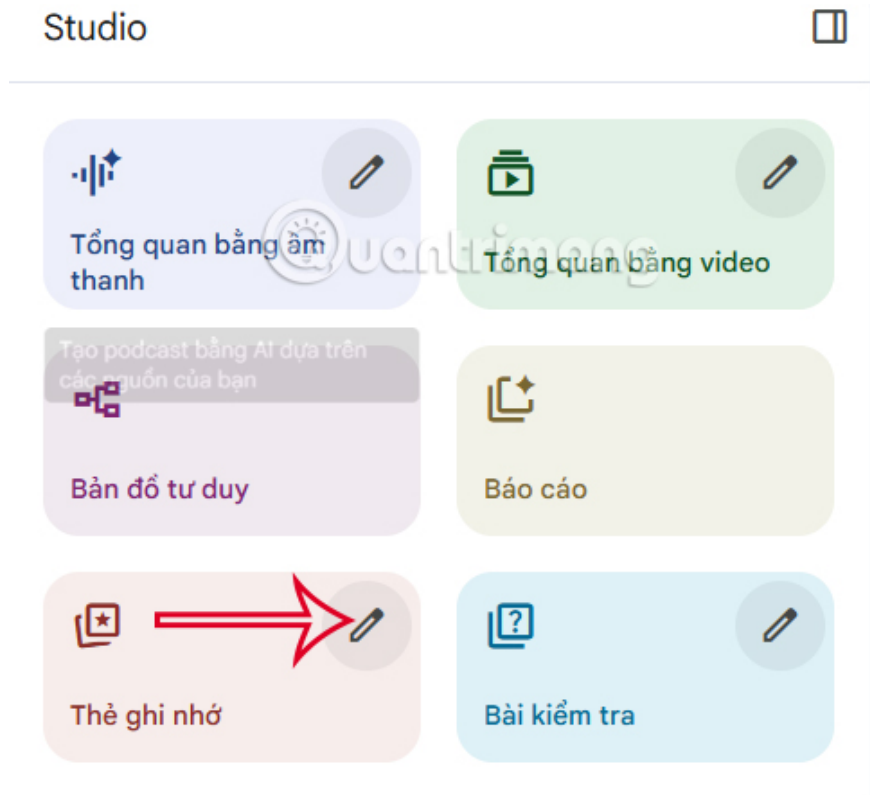

How to create flashcards from documents in NotebookLM

Step 1:

You access NotebookLM and then **upload your document file to the website** .

After the document has been uploaded to the system, **click on the pen icon in the Memo tab** to customize the questions created from the document.

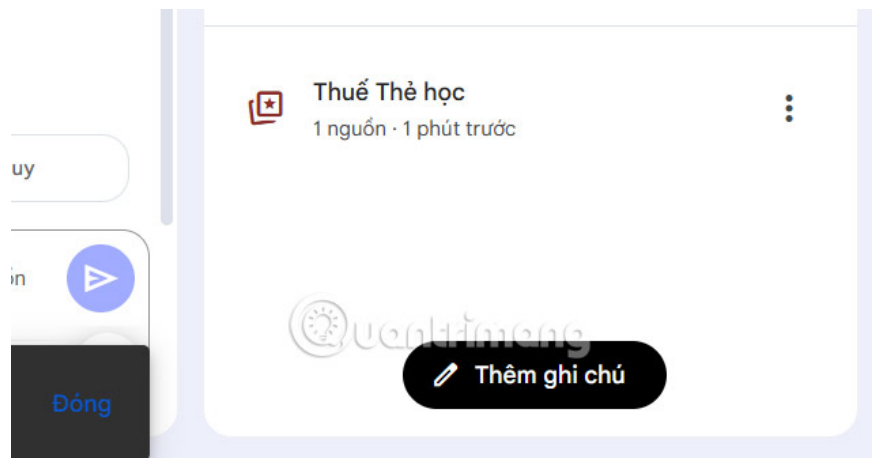

We customize the content of the memo we want to create, then **click the Create button** below.

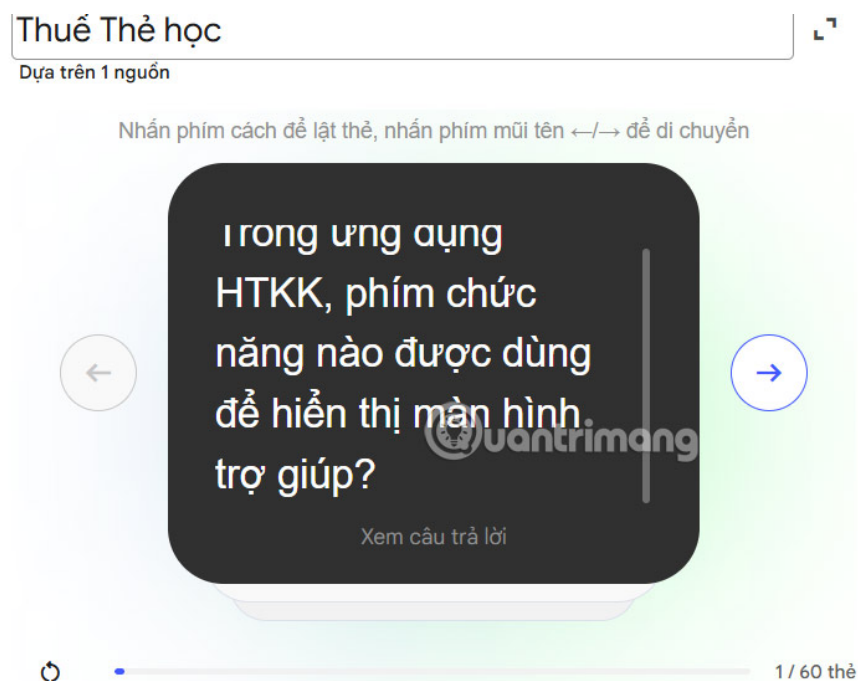

Step 2:

You will now see the document memo card created; **click on it to view its contents**.

We use the arrows to move through the flashcards. The questions are taken from the content of the document and include important points that you need to remember.

Step 3:

Click on **View Answers** to see the concise, brief answers that NotebookLM has compiled and designed for each flashcard. **Click on Explanation** to see more details for the answer.

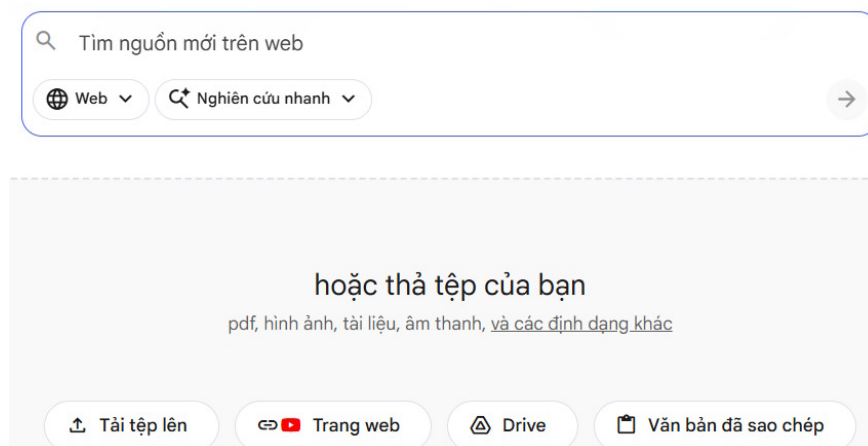

Quickly create quizzes on NotebookLM

NotebookLM offers the option to create quizzes based on content uploaded by teachers, similar to creating quizzes on Gemini or creating quizzes from videos on Magic School AI. Teachers can upload any document to NotebookLM, whether it's a photo or a PDF file, and then this AI tool will generate a quiz that closely follows the content.

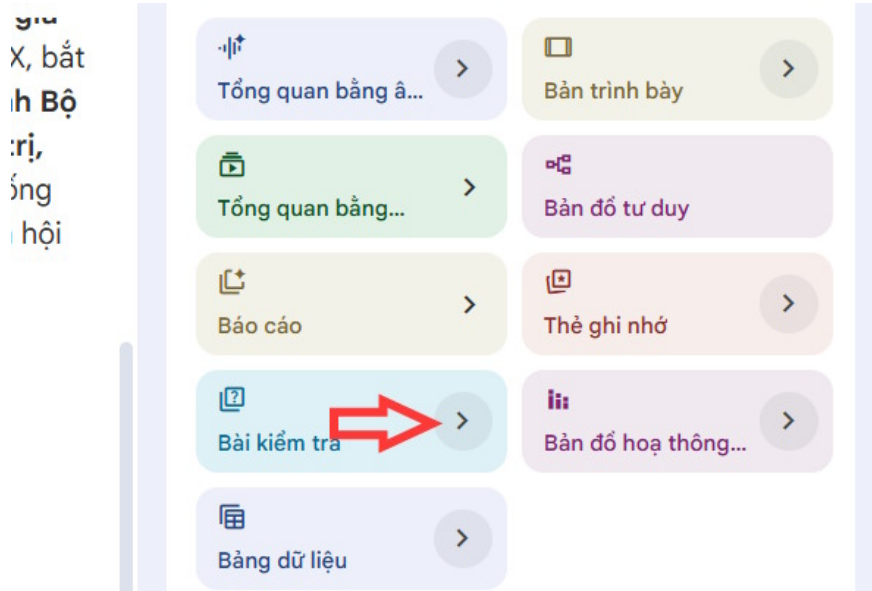

Step 1:

In the NotebookLM interface, you create a new note and then upload **the data file**, which could be a textbook in PDF or Word format.

Step 2:

After the document has been uploaded to NotebookLM, look to the side and click **the arrow icon next to Test** to proceed with deployment.

Step 3:

Here, teachers **enter the requirements for the test**, specifying the knowledge area to be tested, the desired test format (multiple choice or essay-type). Then, select the number of questions and the difficulty level, and **click "Create"**.

Số lượng câu hỏi

Ít hơn Tiêu chuẩn (Mặc định) Nhiều hơn

Độ khó

Đễ Trung bình (Mặc định) Khó

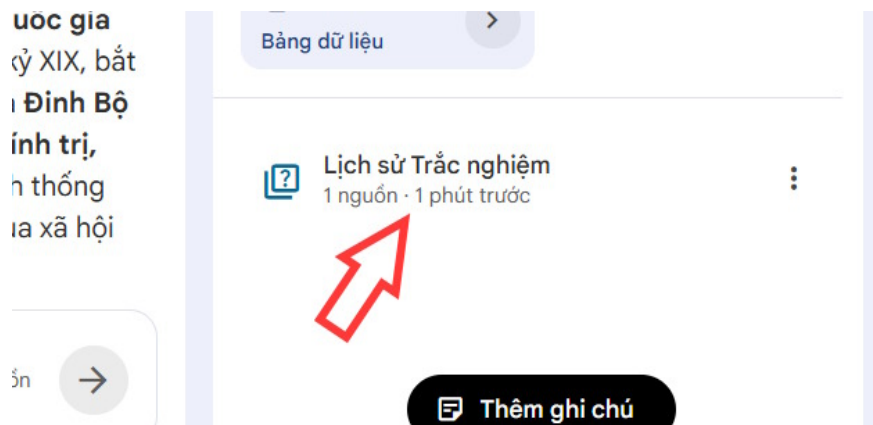

Chủ đề nên là gì?

tạo bài trắc nghiệm từ tài liệu tải lên để học sinh ôn tập kiến thức

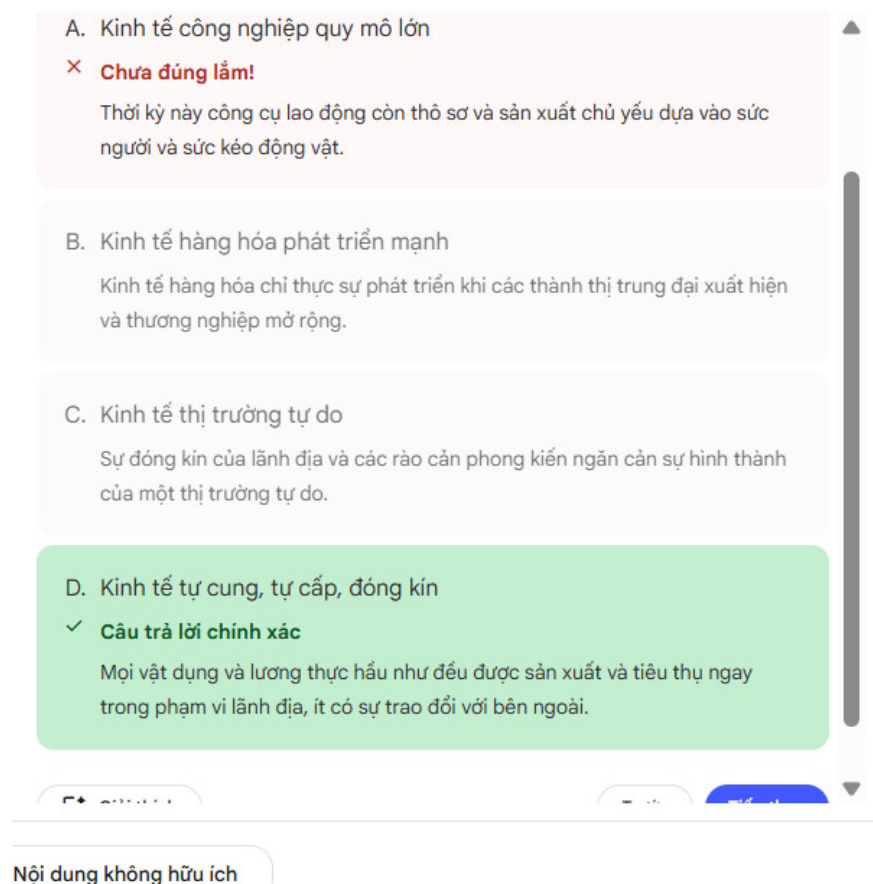

Tạo

Step 4:

Wait a moment and you will see the test created from NotebookLM. Click to view the test content.

The quiz on NotebookLM includes hints for the questions, and if you answer incorrectly, an explanation of the correct answer will be provided below.

Step 5:

To download the test you created on NotebookLM, click **the share icon** and then **use the link to send it to your students** .
