

Instructions for creating subtitles for videos on the phone with KineMaster

Instructions for creating video subtitles with KineMaster in this article will help you make sub videos easily and best.

If we do it on a computer, we have a lot of free subtitle-making software that is good for users, the most popular ones are Aegisub, Format Factory . With an intuitive interface and Fully supported tool, users can create subtitles for videos easily with this video subtitle software.

But when you can't make video subtitles on your computer, you can think about how to do it on your smartphone. There are also a lot of support applications as subtitles for videos on phones, compared to software on the computer, the application for making video subtitles on the phone is somewhat simpler and easier to use.

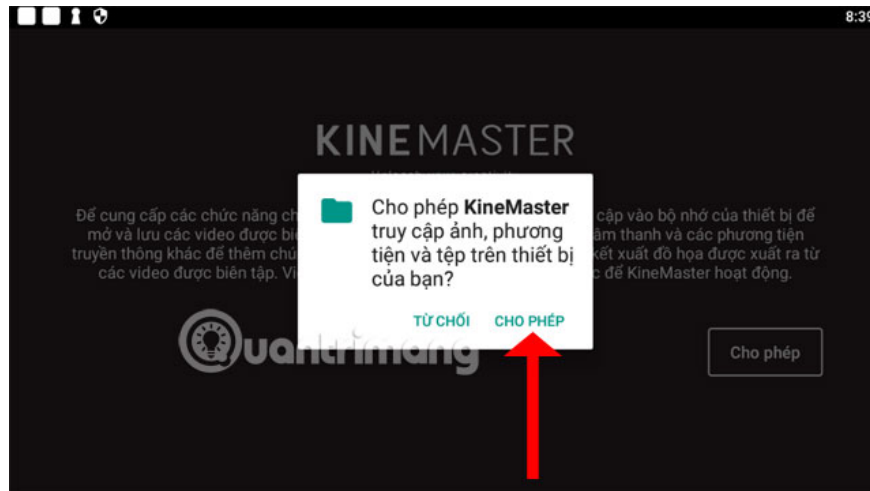

One of the most popular applications is KineMaster, which gives users a set of tools to create subtitles for their videos as expected. You can insert sub, create transition effects, add subtitles, sticker or photo to video . For those who do not know how to use KineMaster to make sub for videos, please follow the instructions below this article. .

Instructions for creating subtitles for videos with KineMaster

1. Create video frames and download videos

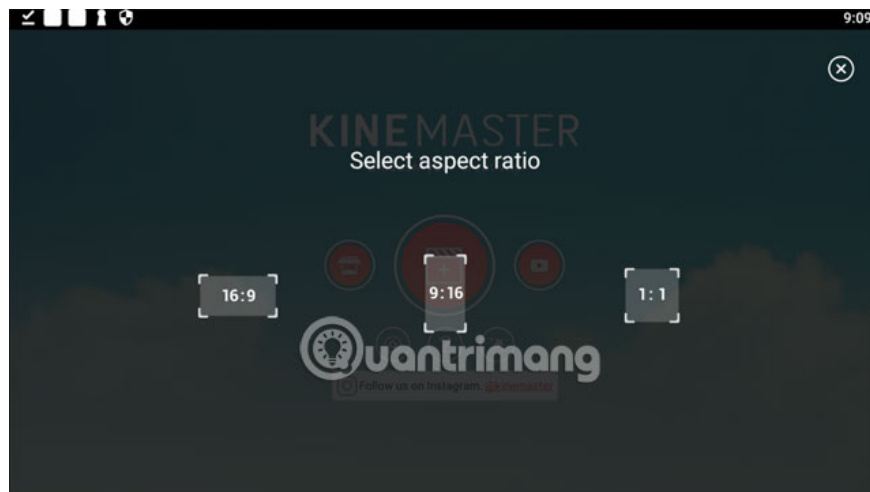

Step 1: Download the KineMaster app and boot up, then allow KineMaster to access photos, media and files on your device.

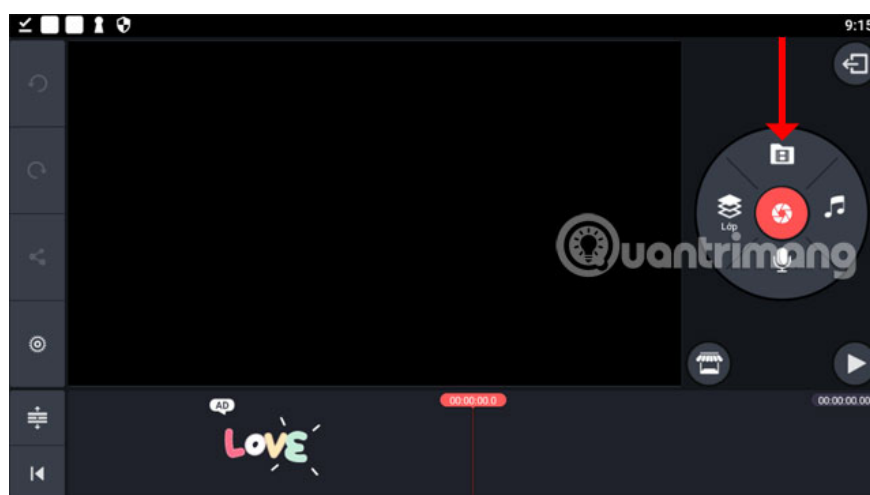

Step 2: Next you can choose to download videos from KineMaster's Youtube or select the videos available on your phone, click on the middle to select videos from your phone and available models that KineMaster provides.

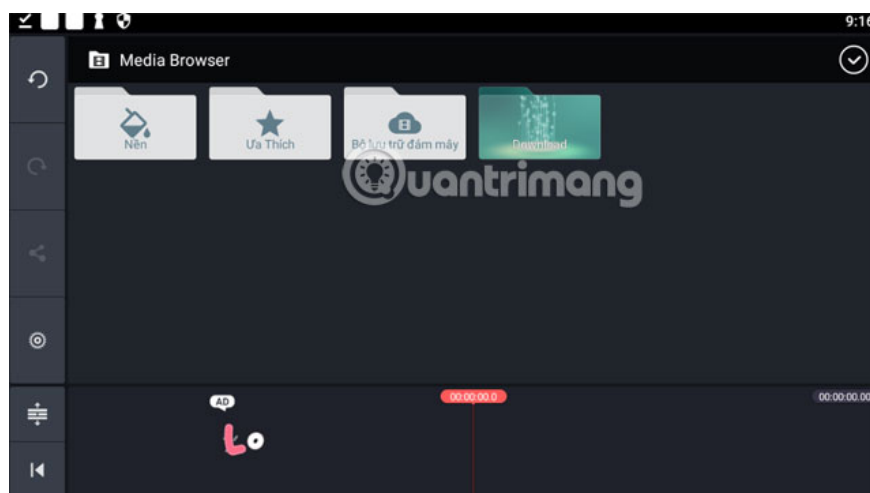

Next, choose the size of the video, including the standard size of 16: 9 for computer monitors, televisions. Next is the size for phone 9:16 and finally the 1: 1 square size.

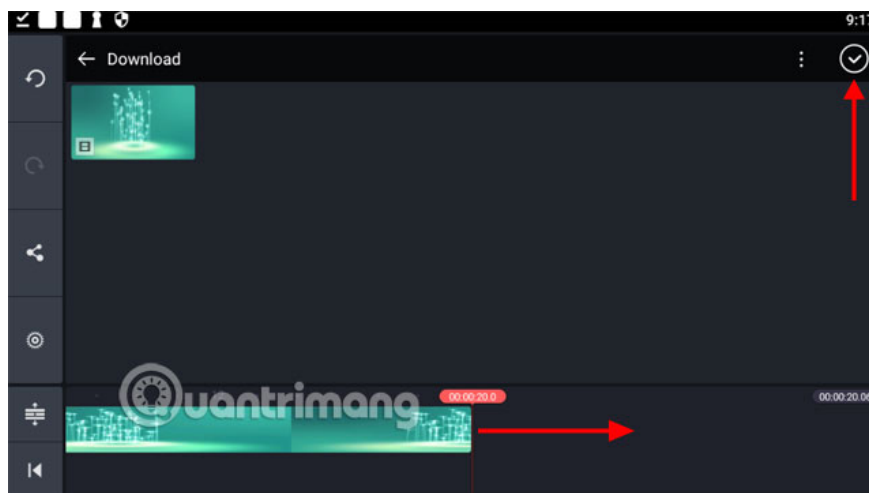

Step 3: Then select the **Media** section by clicking on the icon as shown below.

You will now be able to select the video source to make the sub, in addition to the video, you can also select the image in the Background section to create the video.

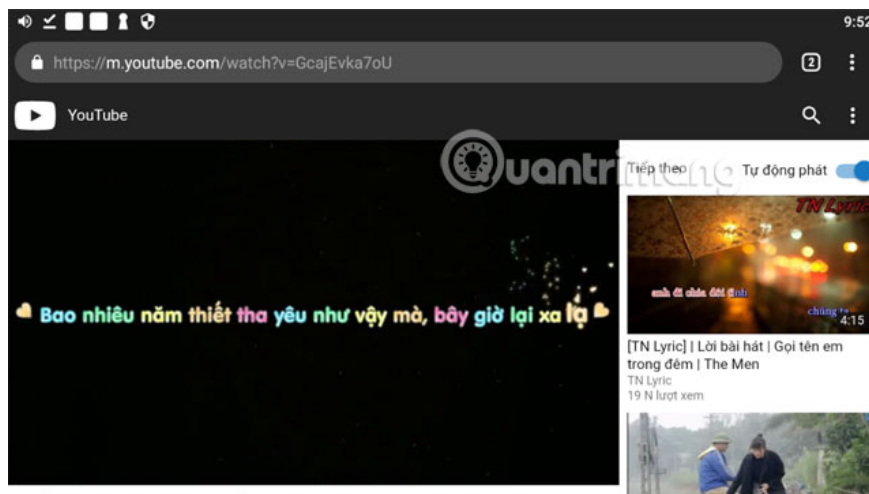

Here I take the example in the **Download** section, select the finished clip, drag the video time bar (pink) to the top and click on the tick above to confirm the clip selection.

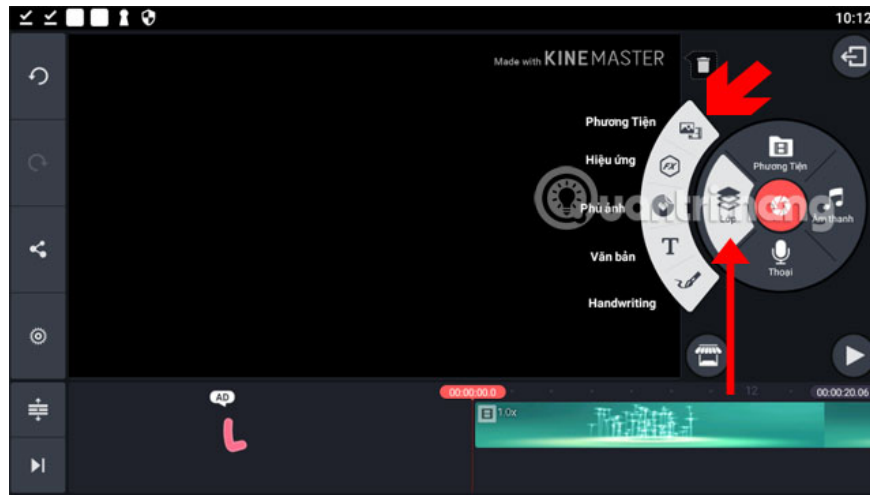

Next is the sub-section, there are a lot of songs with video sub on Youtube, as shown below, the sub-individuals will regularly post the latest sub songs. Or you can contact some sub-channel manager and ask them to make a household.

Next download the video sub on Youtube with the online tool Onlinevideoconverter. Just copy the Youtube video link and paste it into the paste link on Onlinevideoconverter, select the downloaded video format and click Start, then the site will provide the link for you and simply press **Download** as it is.

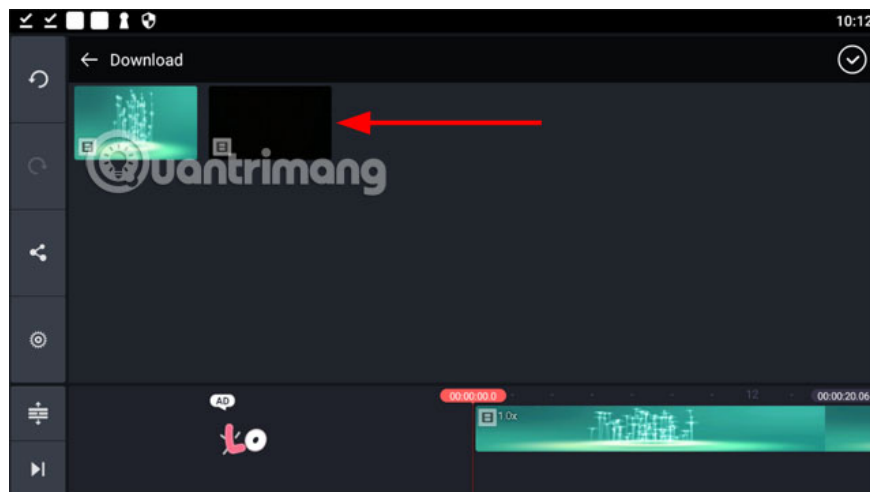

2. Edit subtitles for videos

Step 4: Now click on **Class> Media** to insert the sub into your video.

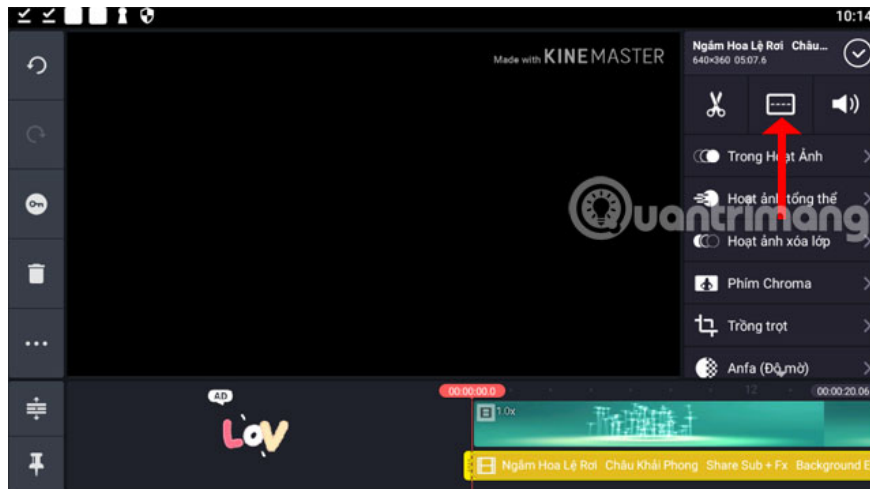

Next select the video sub you just downloaded.

In the sub video frame there will be two icons, the above icon is to rotate the video, below is the resize icon for the video, want to move the sub words. It is recommended that you select a video with a sub display below the video (bottom) and a black background, so it is more convenient for you to place the sub in every position in the video.

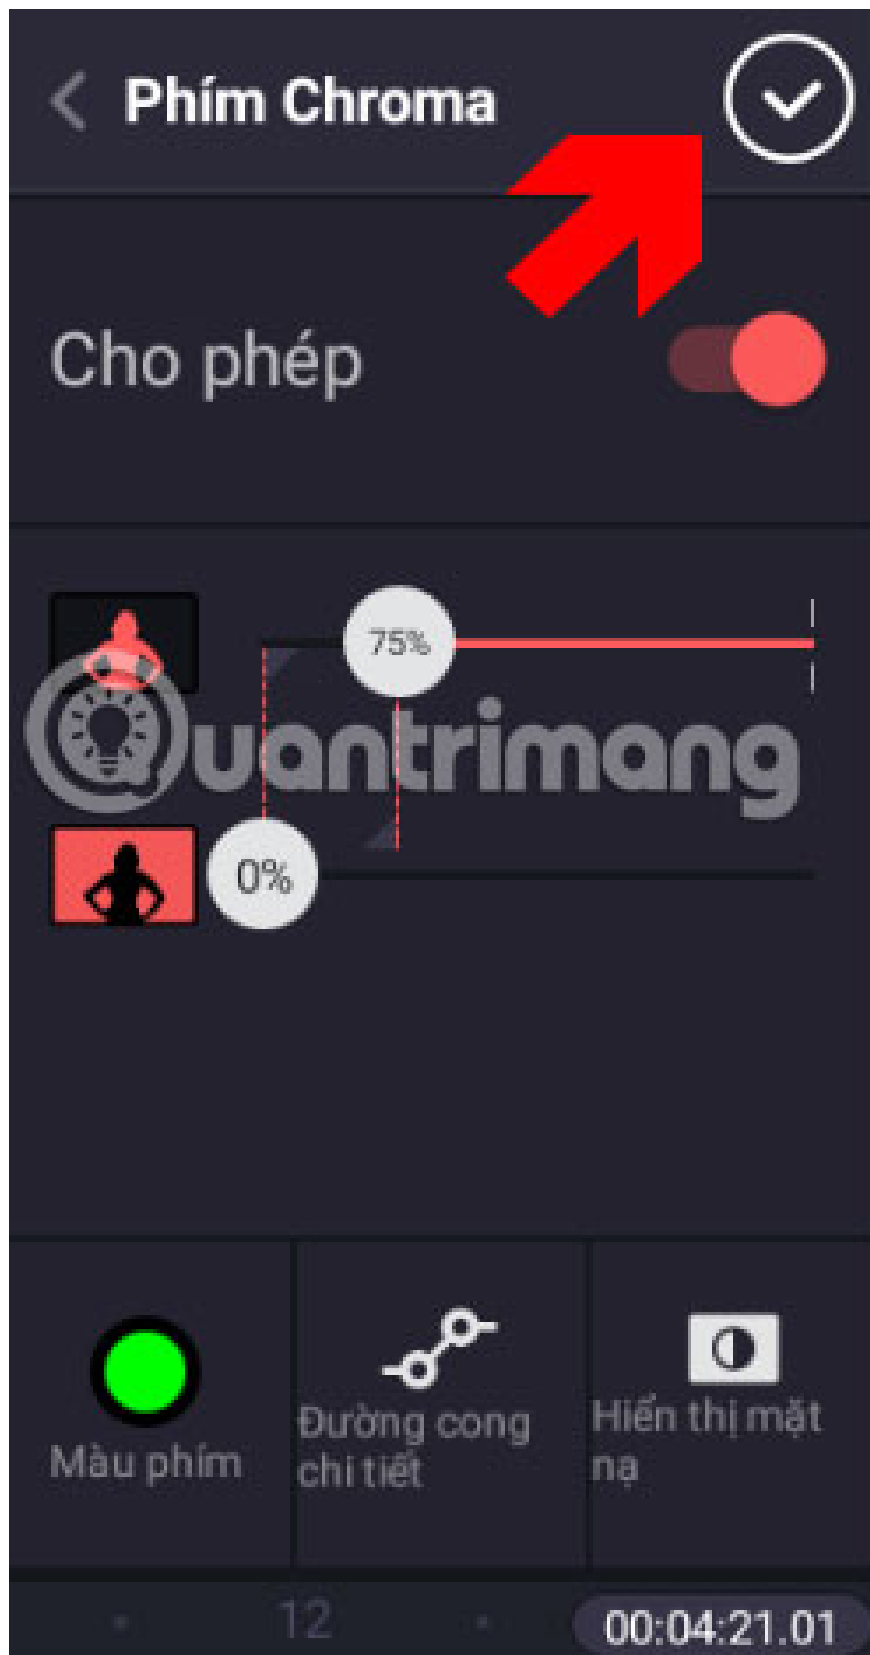

Next is the sub edit, now you are selecting the sub line (yellow) below the media display frame. Only when you select that line will the new editing tools appear, click on the Middle **Screen Split** icon as shown below to edit the sub video.

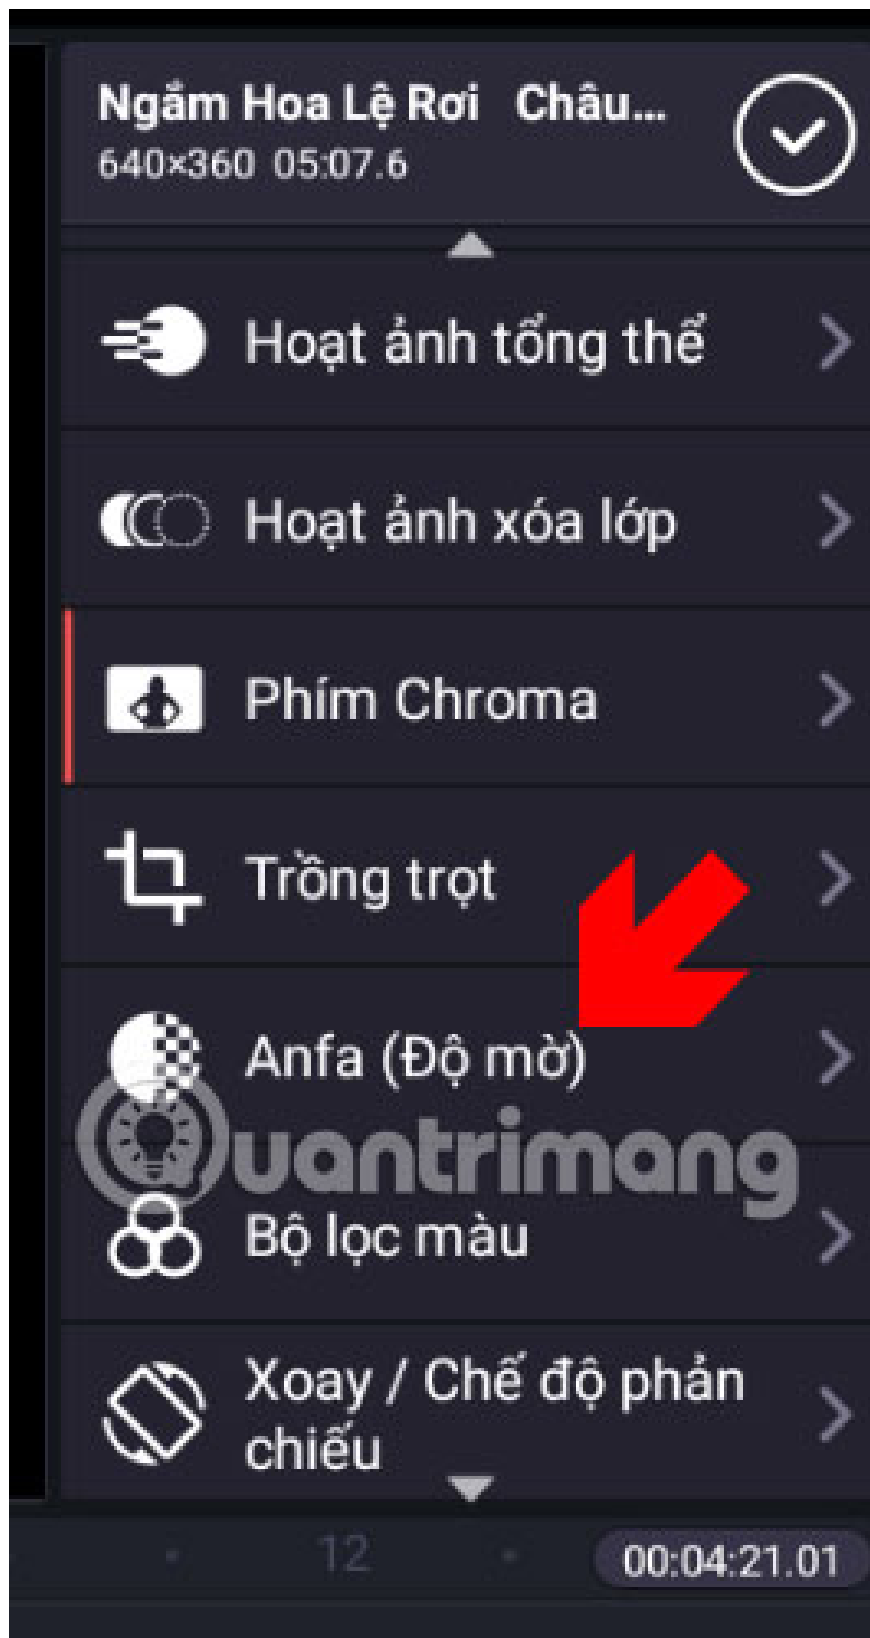

In the Split Screen tool, you can select the available sub video division types, then adjust with the arrow icon. **Off** is also adjusted by the rotation tool and drag the video as above.

Go out and select **Chroma Key** , this tool will help you display the sub more clearly when using, check Allow and just adjust the percentage parameters as shown below.

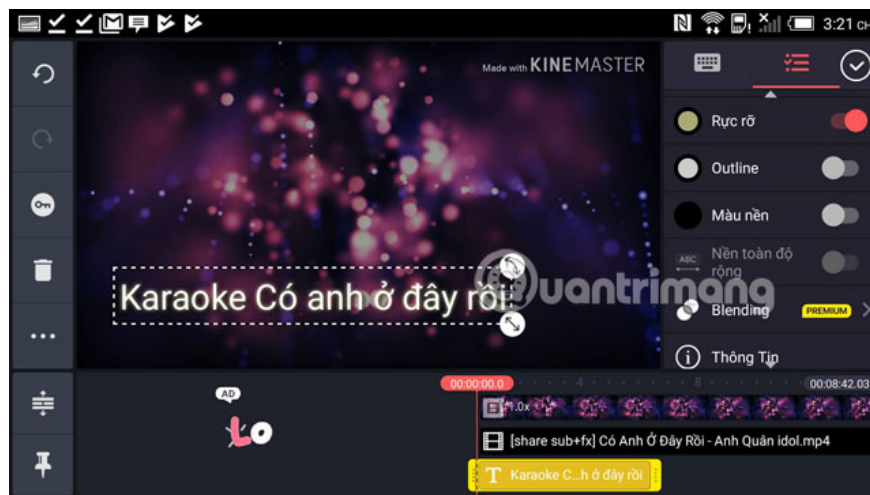

If your video is white, select the **Alpha** tool (**Blur**) at the bottom and choose the opacity that follows the tool's pull bar.

Once completed, you can go out and click on the Play icon in the lower right corner of the tool display pane to test it. You can rewind the segment you want by dragging the video display bar below, if you are not satisfied, just touch the sub video below to edit it.

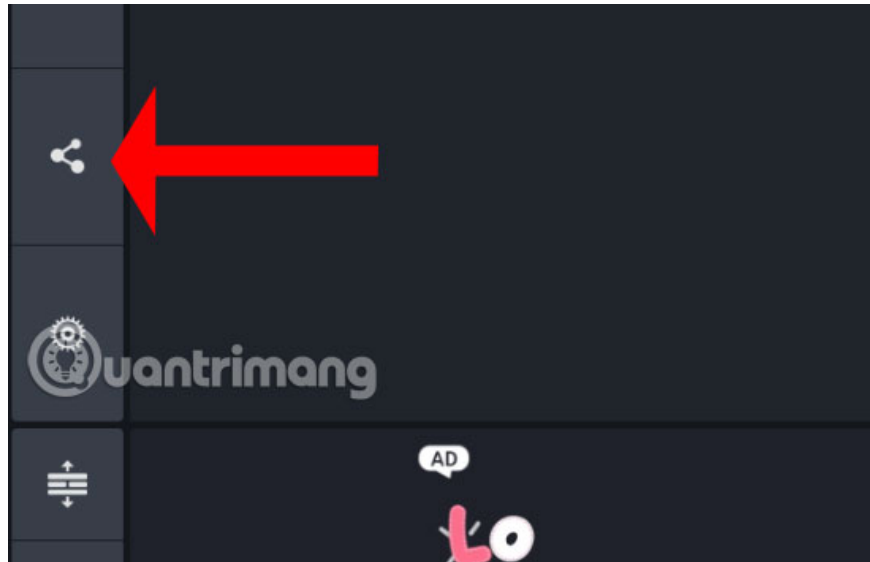

If you want to add content to the video, just click on the **Class** and select **Text** , then write the content you want to insert and click **OK** . Next, edit the video content to add more effects if you want it to stand out.

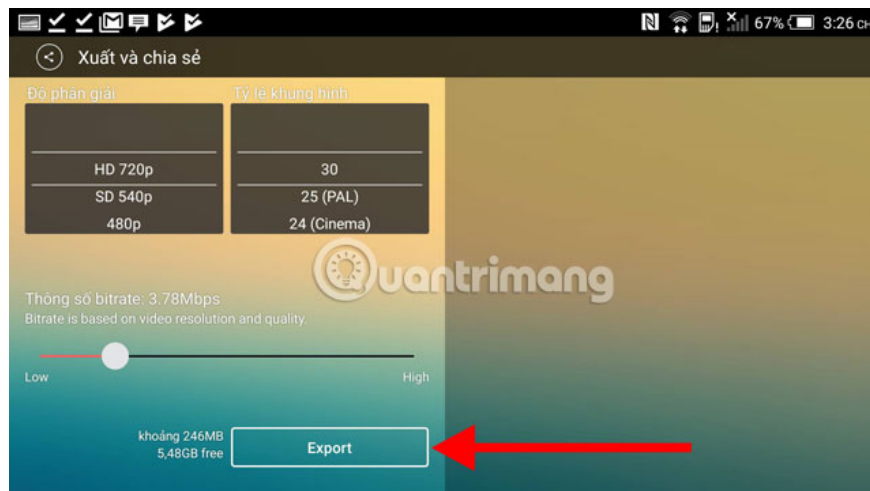

3. Export videos

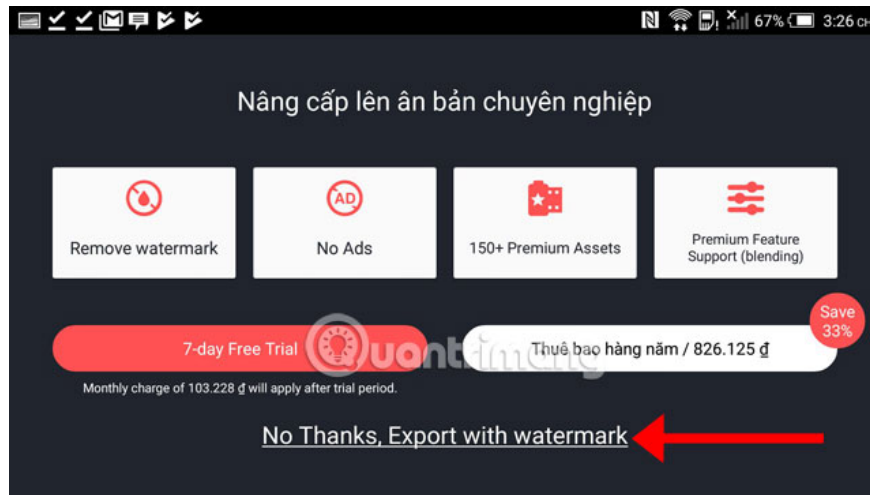

Step 5: When you have finished editing the subtitles for the video, click the checkmark at the top right of the tool frame, then click on the **Save** icon as shown below.

Select the resolution and frame rate, you can drag the Bitrate Parameter bar below and click Export below. KineMaster will also let you know how much of your video is when exported.

If this message appears, click No Thanks, Export with watermark and you will leave the KineMaster logo in the upper right corner of the video when exporting.

Later when you want to edit the video you just need to go back to the application and select the video in the list and add anything you want into it.

Although it is not free and has a logo when it comes to exporting video, Kinemaster is also worth saving your moments or creating a commemorative video with photos on your phone with Kinemaster. Hopefully, the guide to creating subtitles for videos on the phone with Kinemaster above will help you get the best videos.
