This is an available feature of the software and you will not need to install additional tools to support. So how to cut video on VLC Media Player?

1. Download VLC Media Player for free

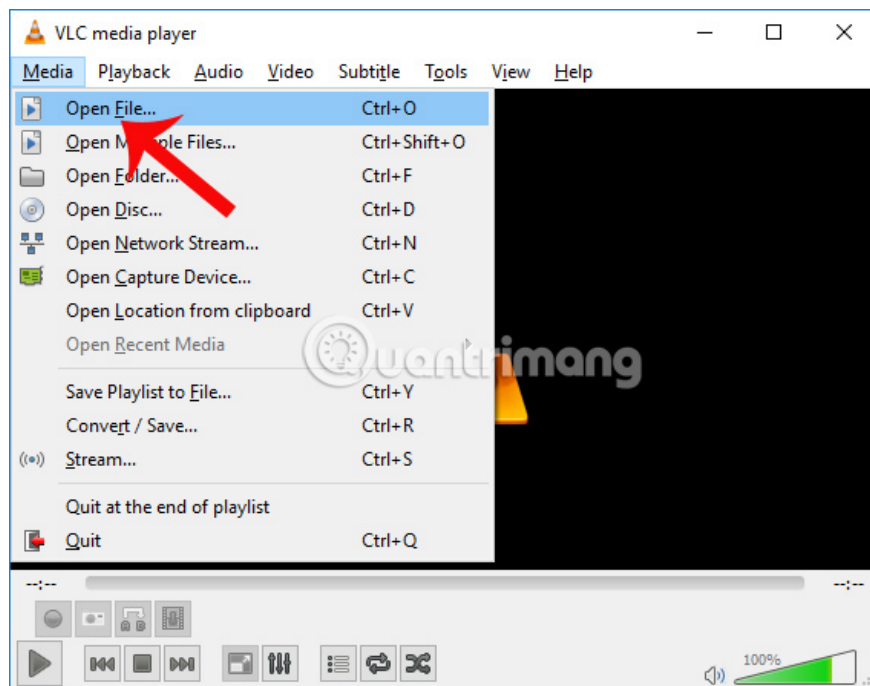

## **Step 1:**

Open the VLC Media Player software interface. At the main interface, click on **View** and then select **Advanced Control** to open the video cutting toolbar.

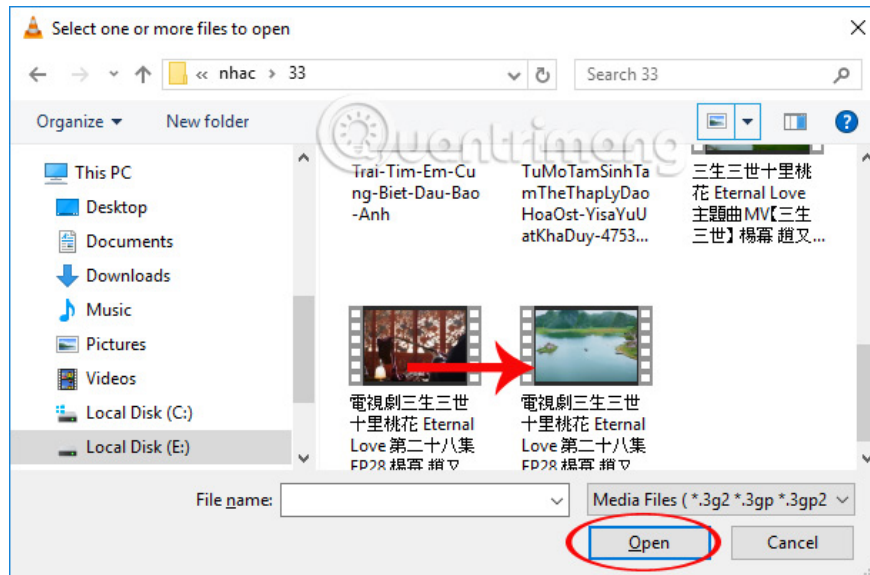

## Step 2:

Also at VLC Media Player interface, we click on the **Media** tab and select **Open File** , or press Ctrl + O to open the video you want to cut.

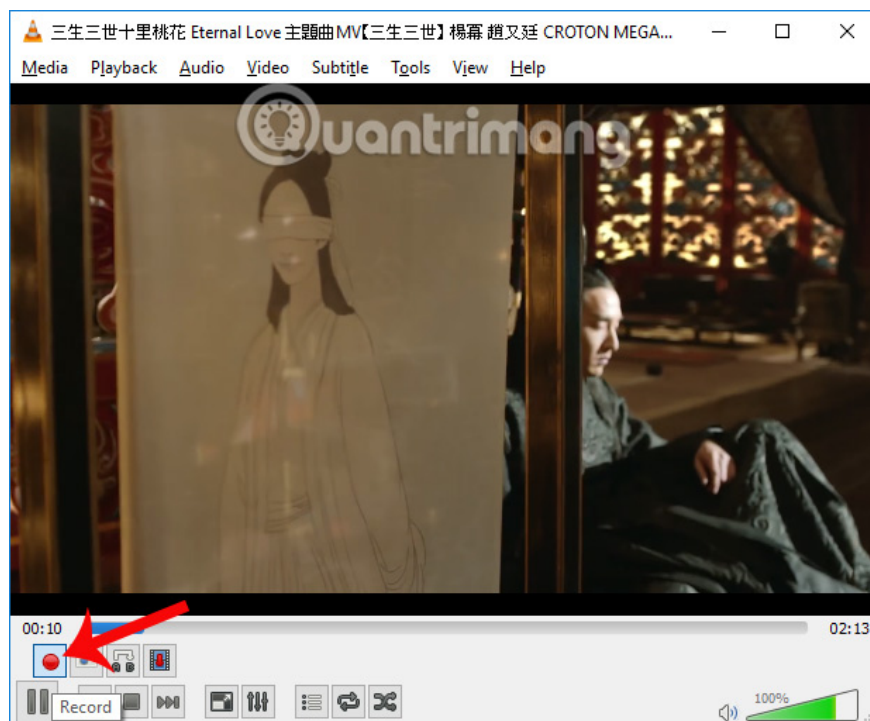

Go to the folder containing the video you want to cut and then select the video, click **Open** .

### Step 3:

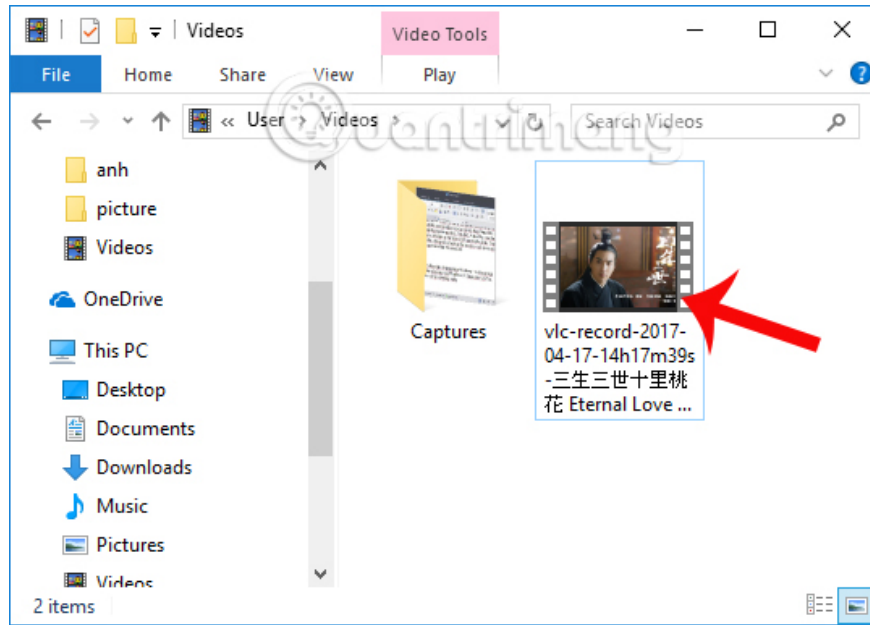

Video playback interface appears. We will click on the **Play icon** to play the video. At the beginning of the **position of the video you want to cut** , click on the **red circle icon** . When it comes to the **end position for the video to be cut** , we **press the red button** to select the stop for the video.

### Step 4:

To find the cut video archive folder on VLC Media Player, we access the path **C: UsersUsernameVideos /** . In it, the Username is the username on the computer.

You will see the video has been cut completely in this folder.

A simple and useful feature that makes it simple, isn't it ?! In addition to the main video playback feature on VLC Media Player, users can use many other features such as cutting video in the above tutorial article, without having to install additional support program.
