

How to enable priority notifications on iPhone - Create notification vibration mode

In iOS 18.4, Apple finally brings Apple Intelligence Priority Notifications to iPhone.

In iOS 18.4, Apple finally brought Apple Intelligence Priority Notifications to the iPhone. This feature makes it easier for users to keep track of their notifications by displaying the most important notifications at the top. Priority Notifications uses Apple Intelligence to analyze the content of notifications and select the most important notifications to display at the top of the lock screen. Here's how to enable Priority Notifications on iPhone.

How to enable priority notifications on iPhone

We need to access **Settings** on the phone then click on **Notifications** to adjust notifications on the phone.

Under **Apple Intelligence settings** , users click on **Prioritize Notifications** to enable priority notification mode. To enable priority notifications on iPhone, you just need to **enable Prioritize Notifications** .

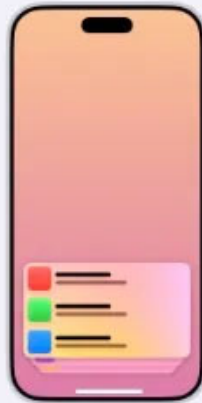

If you want to customize priority notifications, you can also choose which apps notifications appear and prevent notifications from certain apps from appearing in this section.

Prioritize Notifications

Apple Intelligence can show you notifications that may be important in a separate section on the Lock Screen, so you can catch up on what you may have missed.

You can still swipe up to view all notifications.

Prioritize Notifications

iPhone uses on-device processing to analyze the content of notifications for importance while protecting your privacy.
