

# Instructions for finding or creating an RSS feed for a website

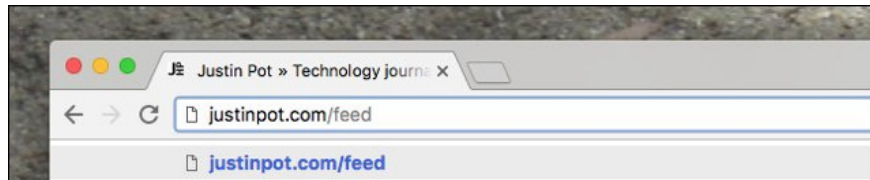

If you're still a regular RSS user, you've definitely noticed that on some sites there's no longer a visible RSS icon. So how to find RSS feeds?

If you're still a regular RSS user, you've definitely noticed that on some sites there's no longer a visible RSS icon. So how to find RSS feeds?

Here are ways to search or even create RSS feeds for all websites, even on an unrequested site.

1. RSS feeds - the tool will dominate online news sites

## Find hidden RSS feeds on websites

Most websites are built using a content management system or CMS. Each major CMS provides an RSS feed by default, which means that RSS exists on those sites whether the site creator realizes it or not. In these cases, you can use a simple URL to search for RSS feeds.

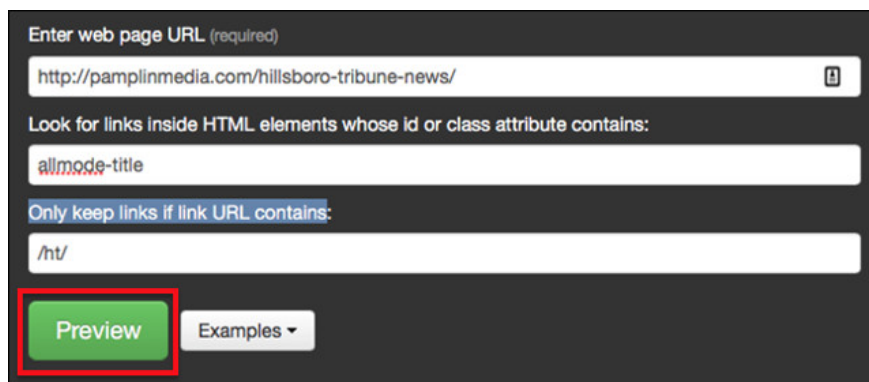

For example, about 25% of websites are built using WordPress. The rest is built on platforms such as Blogger of Google, Tumblr of Yahoo or Medium. Here's how to find RSS feeds for all those sites.

1. If the website is built using **WordPress**, just add */feed* at the end of the URL, for example *https://example.wordpress.com/feed*.
2. If the site is built on **Blogger**, just add */feeds/posts/default* at the end of the URL, for example *http://blogname.blogspot.com/feeds/posts/default*.
3. If a blog is built on the **Medium.com** platform, just insert */feed/* advance the publish name in the URL. For example: *medium.com/example-site* becomes *medium.com/feed/example-site*. You can do the same for individual author pages, if you want.
4. If a blog is built on **Tumblr**, just add */rss* at the end of the URL of the homepage. For example: *http://example.tumblr.com/rss*.

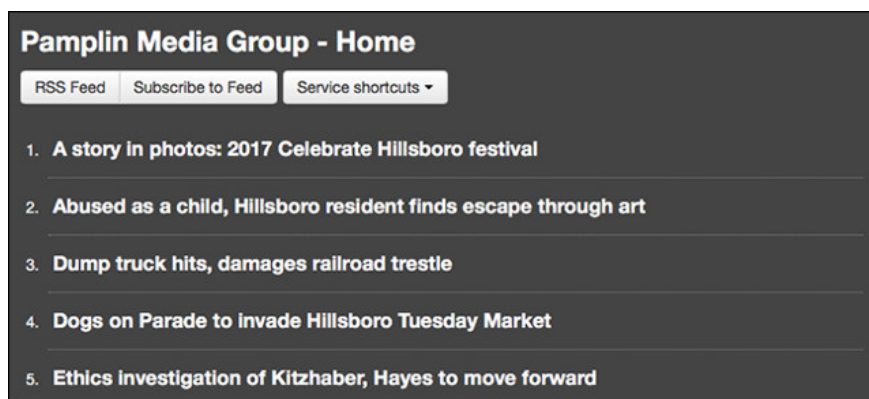

The third and final school, 'Only keep links if link URL contains' (Keeping links only if the link contains URLs) will give you more control. If you find that only specific links are specific to a specific page, add some characters to that URL. This may help filter ads and other annoyances.

Once you have entered, you will be able to click on the green " **Preview** " button to preview.

If everything worked, you should see a list of titles.

You can now subscribe to an RSS feed for a site that was previously unavailable. If you don't succeed, don't panic, just go back to Feed Creator and try out some of the current criteria.

Good luck!
