

# Instructions for fixing common Discord errors, detailed

Mic not working, messages not sending, or black screen when streaming are common errors when installing Discord. Here are effective troubleshooting instructions to help you continue connecting without interruption.

Are you experiencing Discord not sending messages, not being able to access voice channels, or not having your mic working? These errors can cause disruptions while working or playing games. Here are quick fixes to get the software running smoothly again.

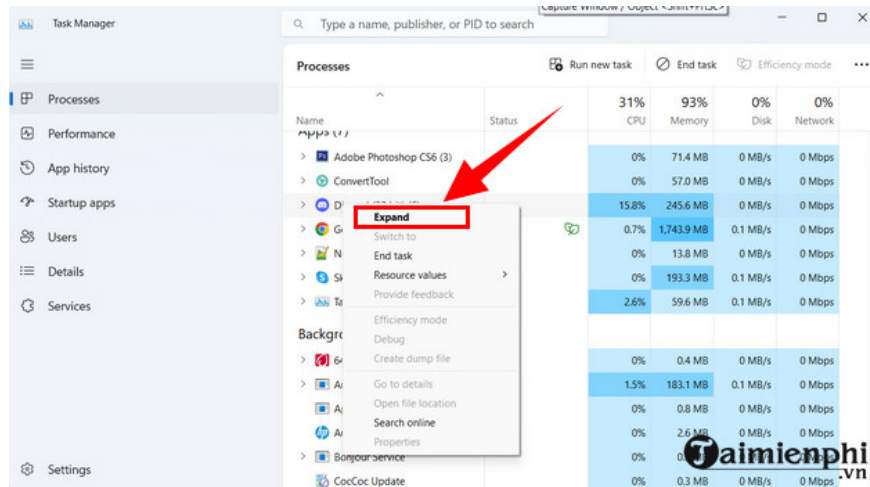

## *1. Fix Discord installation failure*

During the installation process, some users reported that they often encountered the error " **Discord installation has failed** ". If you also encounter the same error, refer to some of the fixes below.

### *Step 1: Stop the Discord process on Task Manager.*

- Press **Windows + R** to open the Run window.
- Type **taskmgr** there and press Enter to open the Task Manager window.
- On the Task Manager window, in **the Process tab** , select the related processes, then click **End task** .

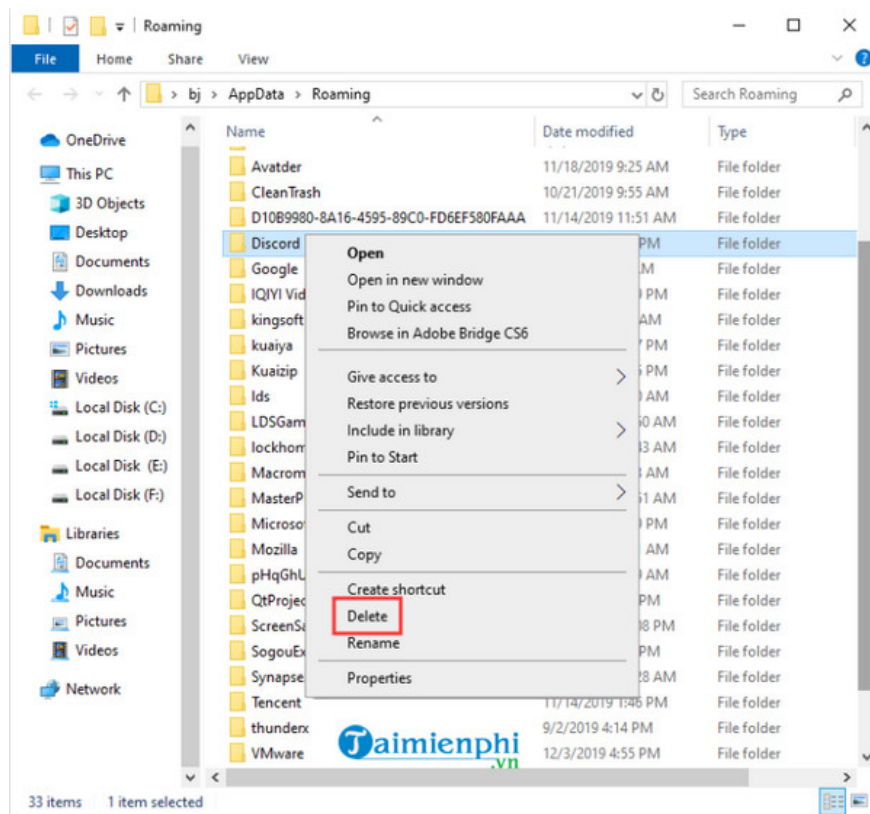

- Finally close Task Manager.

### Step 2: Delete the folder and reinstall the application

Once you have stopped the related running processes, the next step is to proceed to delete the Discord folder.

- Press **Windows + R** to open the Run window, then type **%AppData%** into it and press Enter.

- A new window will appear on the screen, here you find and right-click on the **Discord** folder, select **Delete**.

- Next, open the Run window again and type **%LocalAppData%** into it and press Enter.

- On the window that appears on the screen, right-click on the **Discord** folder, select **Delete**.

- Finally restart your computer and reinstall the application to see if the error persists.

To download and install the application, visit [here](#).

Some Windows Updates may be incompatible and cause Discord errors when installing. If you have tried the above and the error persists, the solution is to uninstall any Windows updates you have recently installed.

- Press **Windows + I** to open the Settings window.

- On the Settings window, select **Update & Security** . Next, in the left pane, find and click **Windows Update** and select **View Update History** in the right pane.

- Click **Uninstall updates**.

- On the window that appears on the screen, right-click on the update you recently installed, select **Uninstall**.

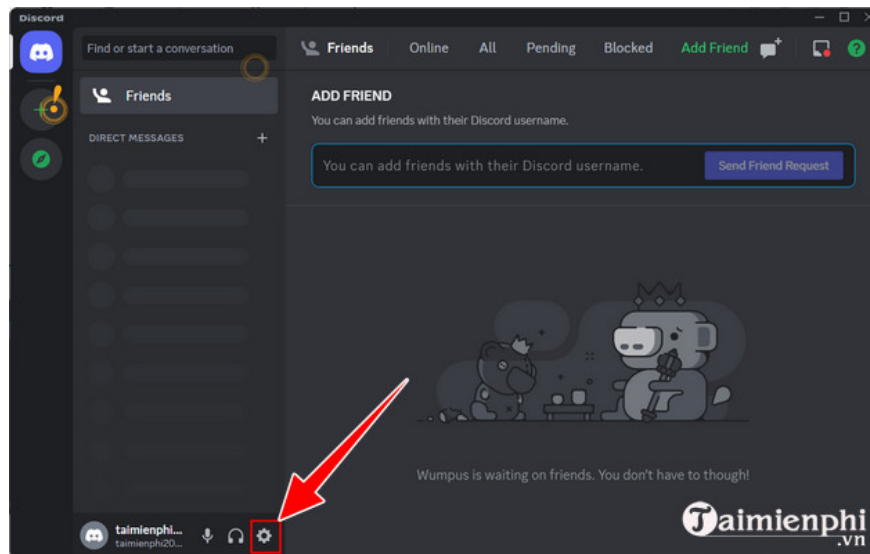

- Finally restart your computer and reinstall to see if the error persists.

## ***2. Mic not working error***

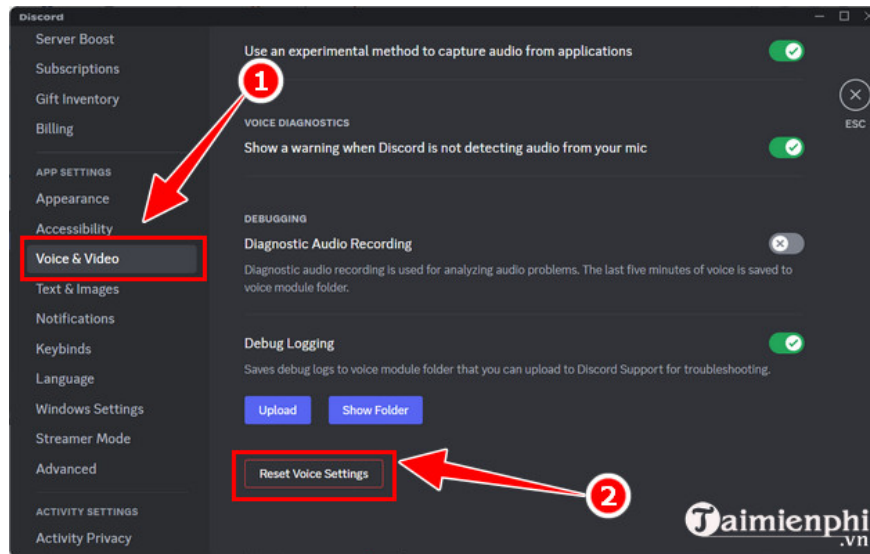

One of the reasons for the mic not working error could be due to a faulty, missing or incompatible sound driver. To fix the error, the solution is to update the sound driver.

Go to the manufacturer's website, find and download the latest driver version suitable for your computer to install and check if the mic is working.

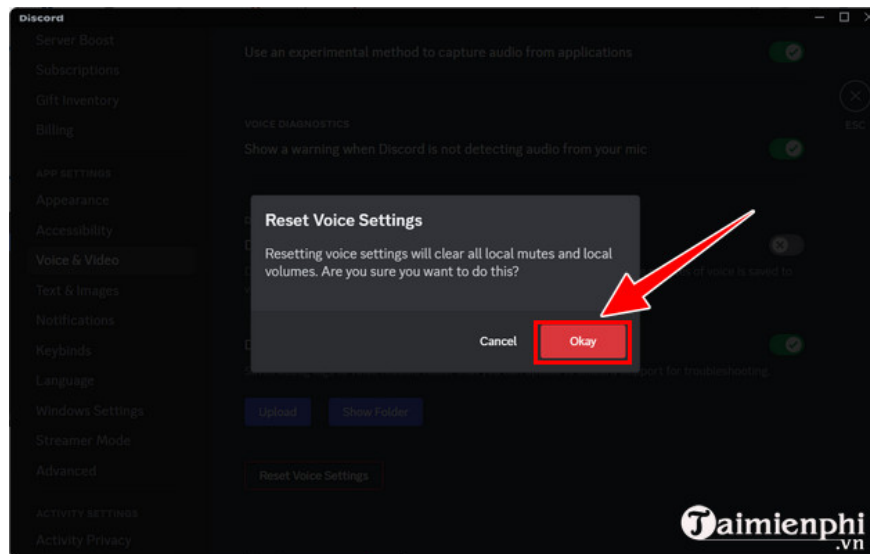

- On the Discord window, find and click the **Settings icon**.

- Click **Voice & Video => Reset Voice Settings** .

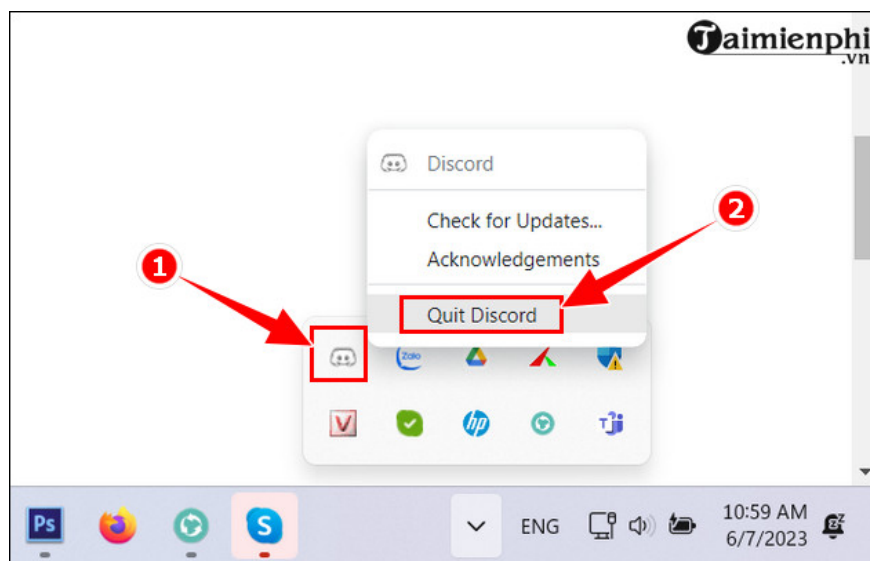

- Click **OK**.

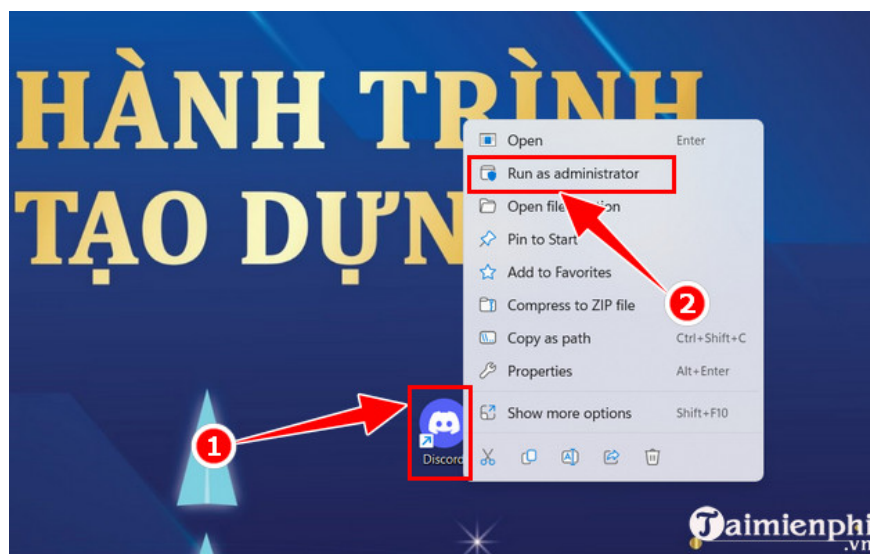

- Try plugging the Mic back in and check if it works.

- Find and right-click the Discord icon on the Taskbar. Sometimes this icon may be hidden, click **Show hidden icons** to display the application icon, then click **Quit Discord**.

- On the desktop, find and right-click the Discord icon, select **Run as administrator** to run the application under Admin rights.

- On the UAC window that appears, click **Yes** to continue.

- Finally test to see if the mic is working.
