

Threads article spoiler installation guide

Threads users will be able to use the spoiler feature for posts with spoiler content that you want to avoid showing publicly.

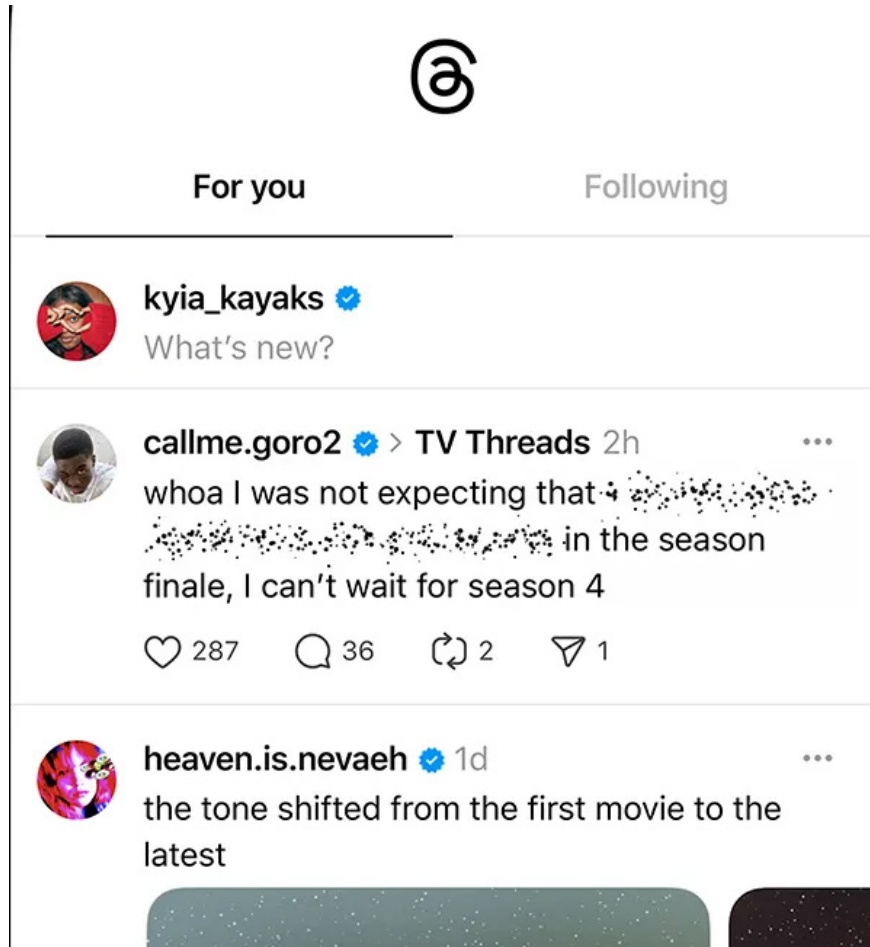

Threads users will be able to use the spoiler feature for posts with spoiled content that you want to avoid showing publicly. Posts on Threads when this spoiler mode is set will be hidden. If anyone wants to see it, they will need to click directly on the content. Below are instructions for setting up spoilers for Threads posts.

How to install spoiler for Threads posts

We will enter the Threads post content as usual. Then you need to **highlight the content you want to hide** and select **Mark spoiler**.

Immediately after that, you will see the content has disappeared and is not displayed on the Threads interface. If you want to see it, just click on the hidden part again.

Currently, the Threads article spoiler feature is gradually being deployed to many people in the near future. You need to update the application to use this new feature.
