

Instructions for installing drivers for Windows with DriverPack Solution

The full search of drivers after installing Windows is quite a headache for many people. So DriverPack Solution software will help us solve that problem.

After installing Windows, the process of finding the right driver will take a lot of your time. Therefore, the software supports the installation of quite a lot of drivers, enabling users to search for full drivers for Windows, such as updating drivers with SnailDriver software, or like the Snappy Diver Installer tool.

And in this article, we will introduce you to DriverPack Solution software, which automatically updates the driver for the computer.

DriverPack Solution is a software that simplifies the process of installing and updating drivers with just a few simple steps. The program will automatically install the driver, even if the video card is recognized and install the appropriate driver.

Instructions for automatically updating drivers with DriverPack Solution

First we need to download DriverPack Solution software by the link below:

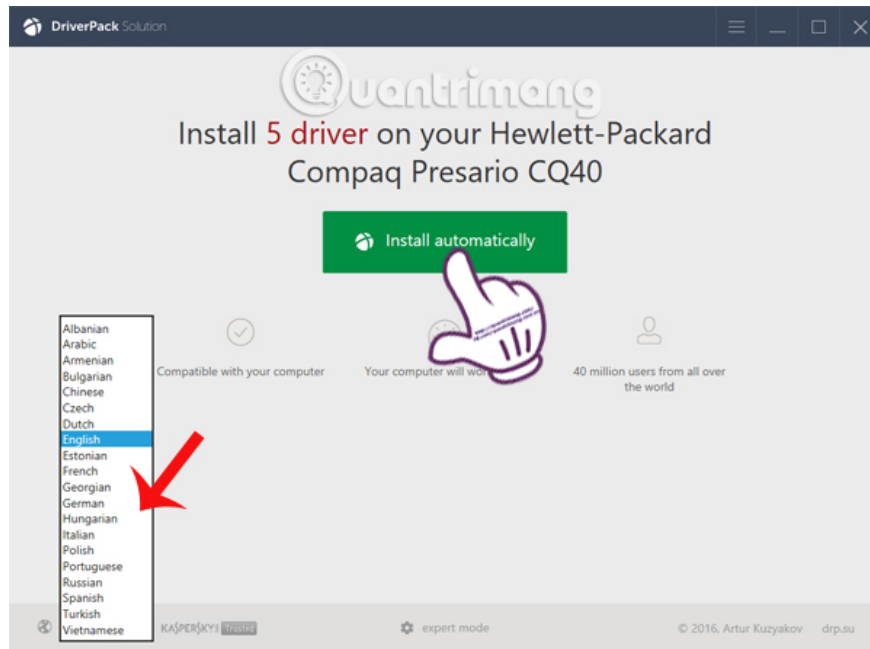

Download DriverPack Solution software [here](#)

Note, to download the DriverPack Solution you need to have uTorrent software available on your computer.

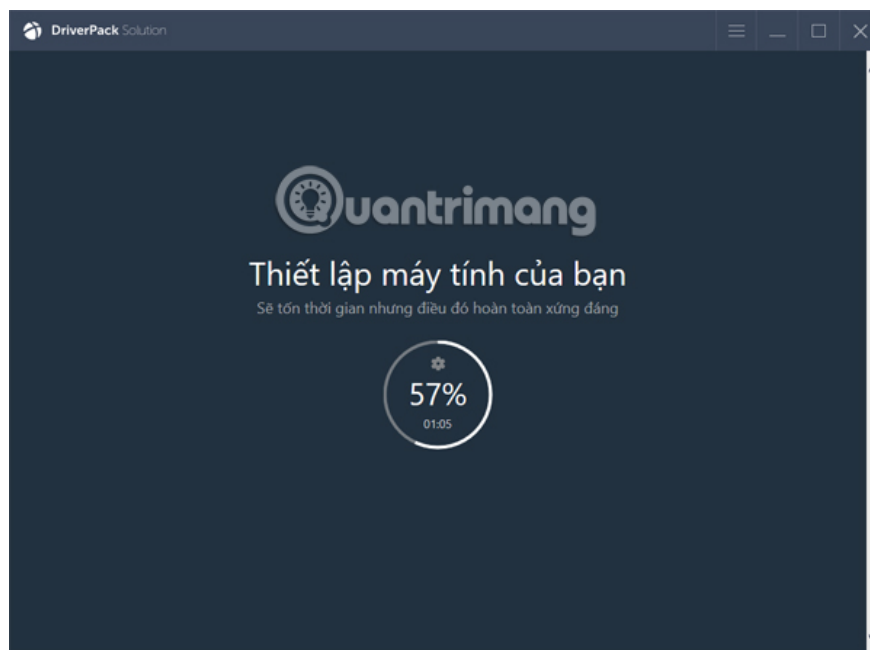

Step 1: After downloading the file to the computer, we start the program. The Driver Pack Solution interface is as follows.

The program will automatically search for missing drivers in your computer and display the number of drivers right on the main interface of the program. We select **Install automatically** to proceed to automatically update the device driver.

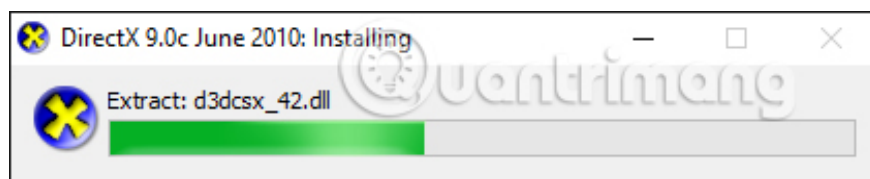

In addition, users can also choose **to change the language of the program** by clicking the **Language** item. I will convert to Vietnamese language for more convenient use.

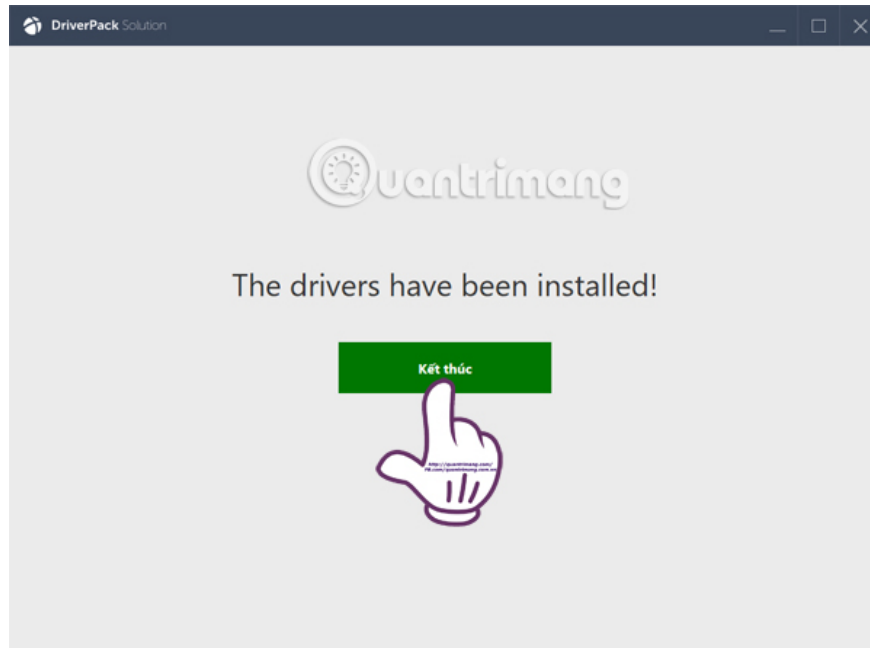

Step 2: Soon, the program will install the driver on your computer.

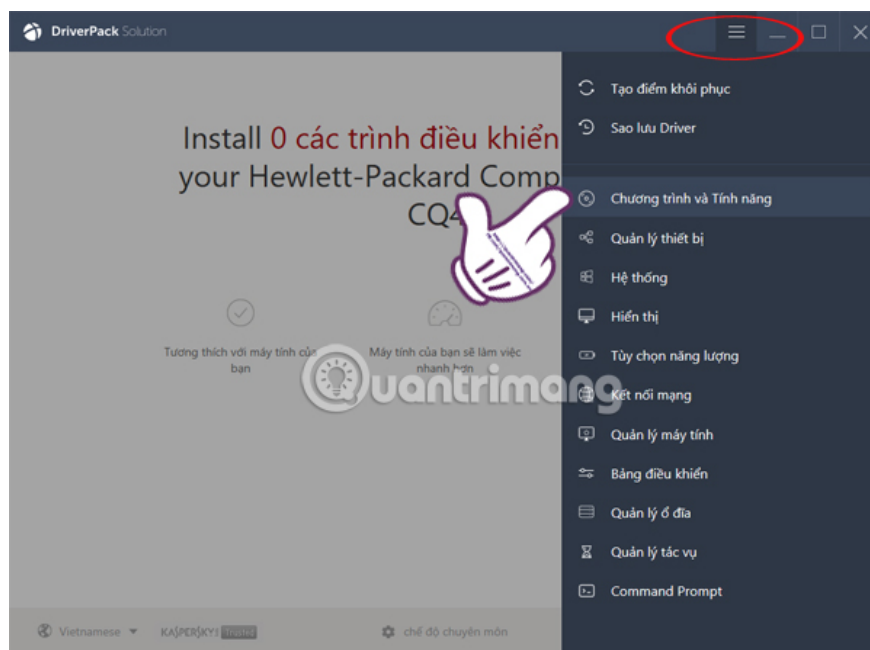

Installation of drivers on the computer appears.

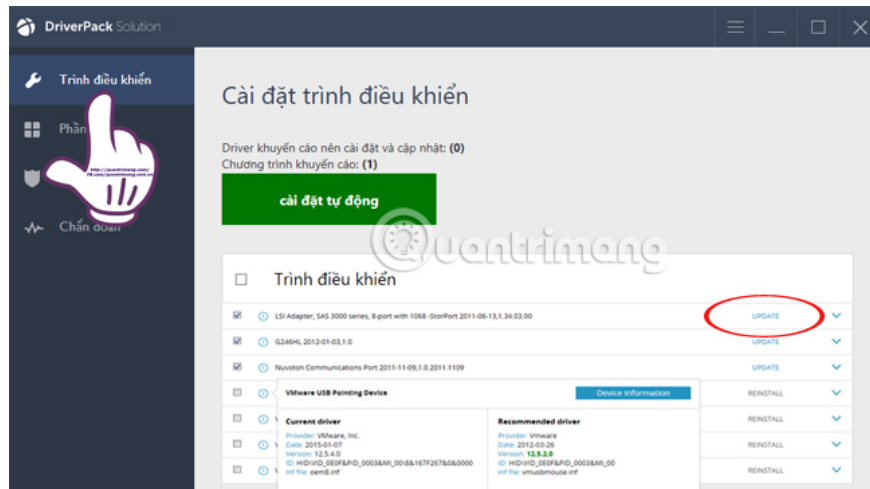

After installation is complete, the program will appear as below. Click **Finish** . Depending on the number of drivers that your computer needs to update, the process is fast or slow.

Also if users want to **choose to install each driver** , or do not want to install any driver, at the interface of the program, click on **the 3 dashes icon** . Then select **Programs and features** .

In the left menu item, click on the **Drivers menu** . The right interface will be a **list of drivers** that your computer lacks. We can select each driver to install and click **Update** (Update) to install the driver.

So, you can install the driver on your computer thanks to the support of DriverPack Solution software. The installation process is quick and automatically updates all drivers, so you won't have to do a lot of work. In addition, users can choose to update the drivers they want for their computer based on the Driver Pack Solution driver list listed.

I wish you all success!
