Although it does not own iPhone 5S, iPhone 5C, Apple users can still "get on" iOS 7, the latest operating system version. This morning **Apple officially launched iOS 7** . List of devices compatible with iOS 7 including: **iPhone 4 onwards, 5th generation iPod touch, iPad 2 onwards and iPad mini.**

Before updating, you should back up data on your iOS device (see instructions **here**).

1. Update OTA

If you're connected to Wi-Fi, you can upgrade to iOS 7 without caring about iTunes. Go to **Settings (General)> General Setting> Check for Software Update> Install now (Install Now)**. You may encounter some problems with Apple's server because the possibility of millions of iOS devices also starts iOS 7 updates.

General **Software Update**

iOS 7.0
Apple Inc.
667 MB

This update features a beautiful new design and contains hundreds of new features, including Control Center, AirDrop, iTunes Radio and improvements to Notification Center, Multitasking, Camera, Photos, Safari, Siri and more.

2. iTunes

Connecting a computer to iTunes can be updated faster. First, you have to 'iTunes' to version 11.1. Open iTunes and click on **iTunes > Check for Update** to install the latest version.

Once iTunes is in the latest version, connect your iOS device. Click on the device button in the upper right corner of iTunes and the **Update** button (**Update**).

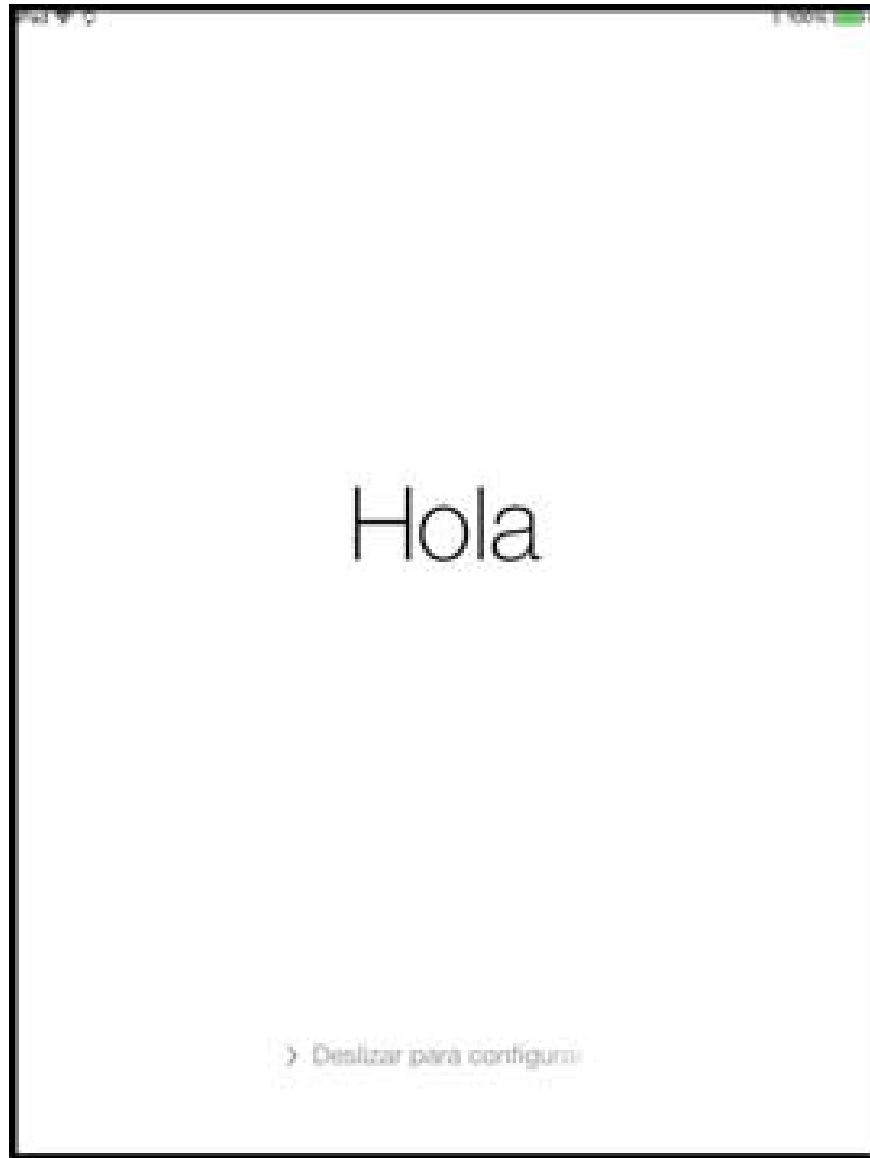

A pop-up window will appear, informing the new iOS version to be available. Click the **Download and Update** button (**Download and Install**) (Or you can choose **Download only** button (**Download Only**) to update later.)

If the download option and update, you need to check the process in the status window above the top of iTunes. Keep the device always connected to the computer until the device restarts automatically.

After booting, the device will welcome you in many different languages.

Swipe to access the iOS 7 installation process (similar to the steps with iPhone).
