

Instructions for installing TeamViewer to control remote computers

In this article, we will guide you to install TeamViewer, then connect, access, control the remote computer via TeamViewer.

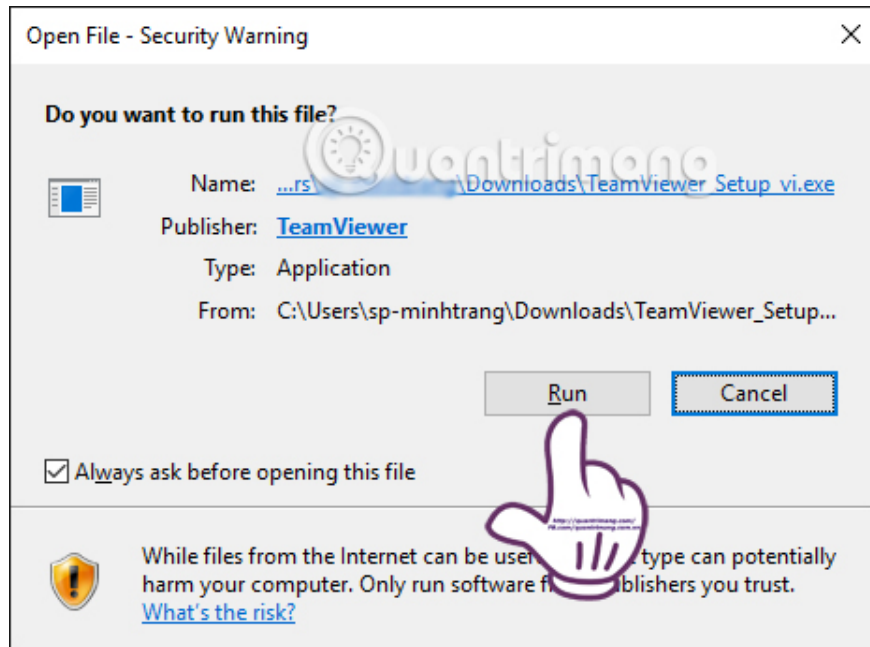

Remote computer control software is now very developed, and TeamViewer is the name used by many people. TeamViewer supports users to connect to remote computers. From there, you can access, support, receive or send files with your partners quickly without having to be present directly to do the job. This will shorten the process as well as the time that the job is still effective.

Especially, for those who often have to do customer support work on computers, TeamViewer will surely become an effective support tool. The latest version of TeamViewer has been released, providing users with new and professionally focused centralized computer controls. TeamViewer is provided free of charge for personal use, but will be charged if used for commercial purposes or used in businesses.

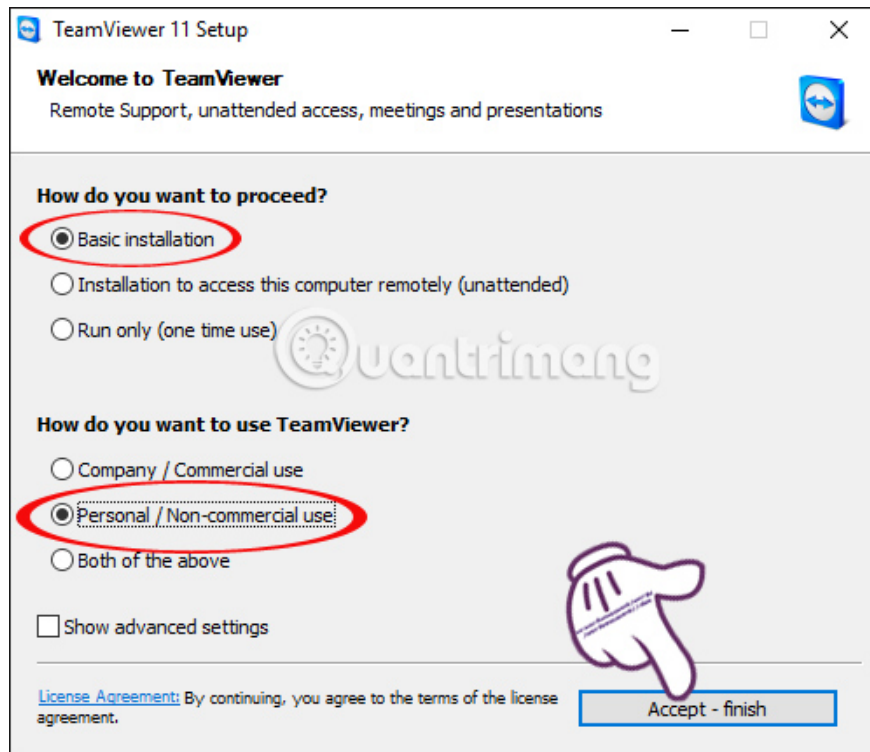

In this article, we will guide you to install TeamViewer, then connect, access, control the remote computer via TeamViewer.

1. Install TeamViewer software

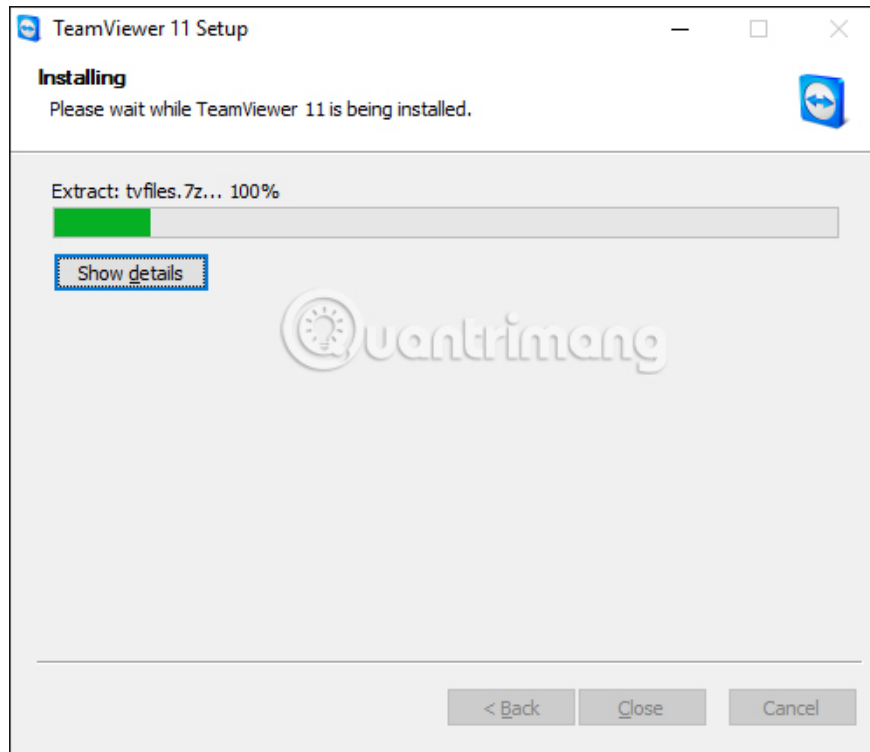

1. First of all, you need to download the latest version of TeamViewer according to the link: [Download TeamViewer software](#)
2. You click on the download file to start the software.

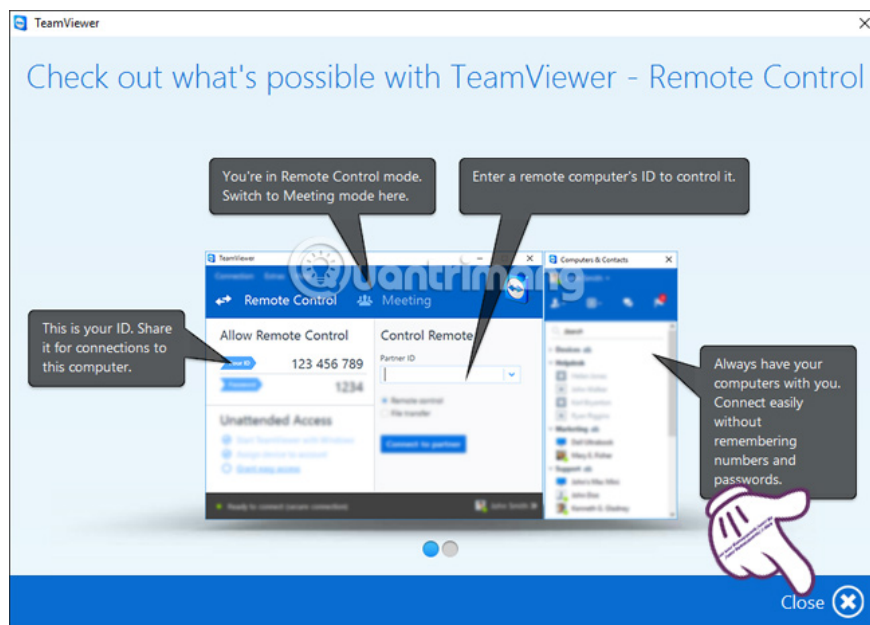

1. Then the new interface appears. There will be two items to choose from:
 1. **How do you want to proceed ?**: We will choose the **Basic installation** section to install normally, support when two people sit and use TeamViewer.
 2. **How do you want to use TeamViewer** : select **Personal / Non-commercial use** version completely free for personal use.
2. Then click **Accept - Finish** to continue installing the software.

1. You wait for the installation process to complete successfully.

1. Soon, **the introduction interface of TeamViewer** will appear . Click **Close** to close and use the program.

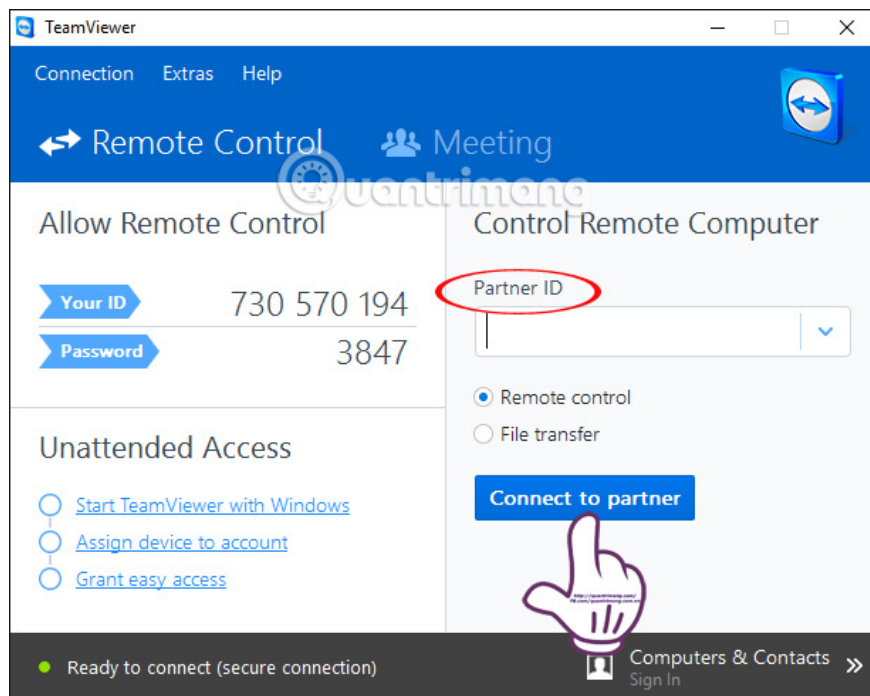

2. Access the remote computer with TeamViewer

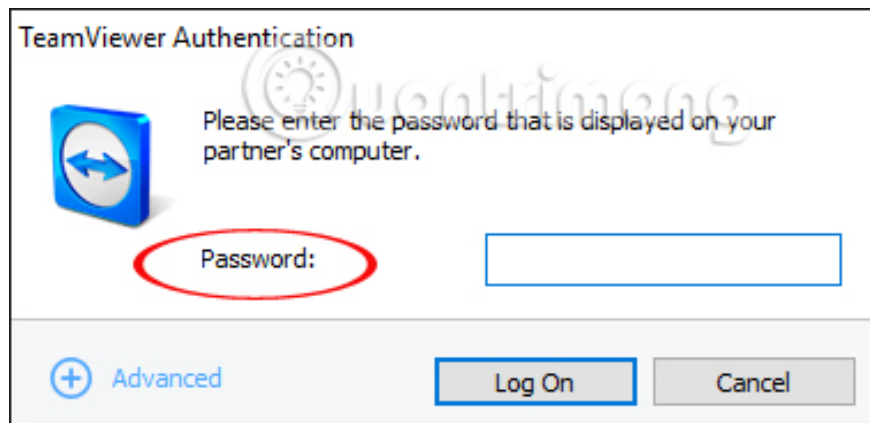

After completing the installation steps, we will proceed to use TeamViewer.

In the **Remote Control** section, you will see the program interface appear with your **ID and password** .

In the **Partner ID** box, **enter the partner ID** and then check either of the **Remote control** remote items, or **File transfer** to send the file. After entering your partner's ID, click **Connect to Partner** .

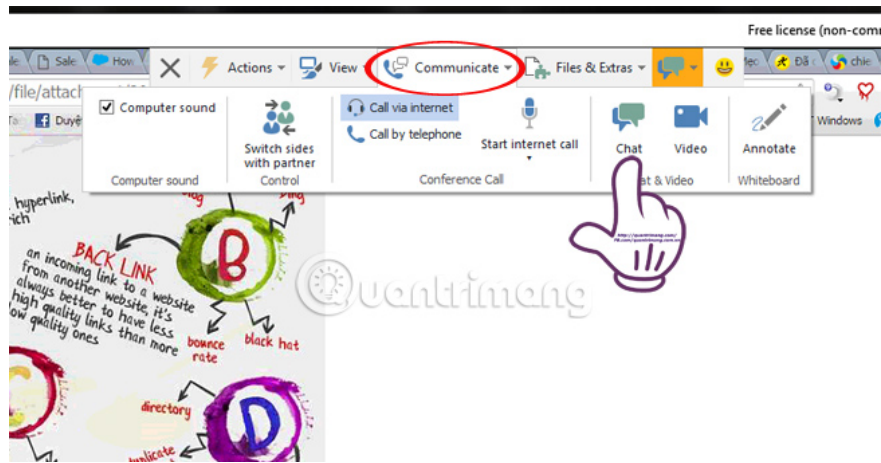

Wait for the software to connect the two IDs together and then appear the **partner's password entry** window, then press **Log On** .

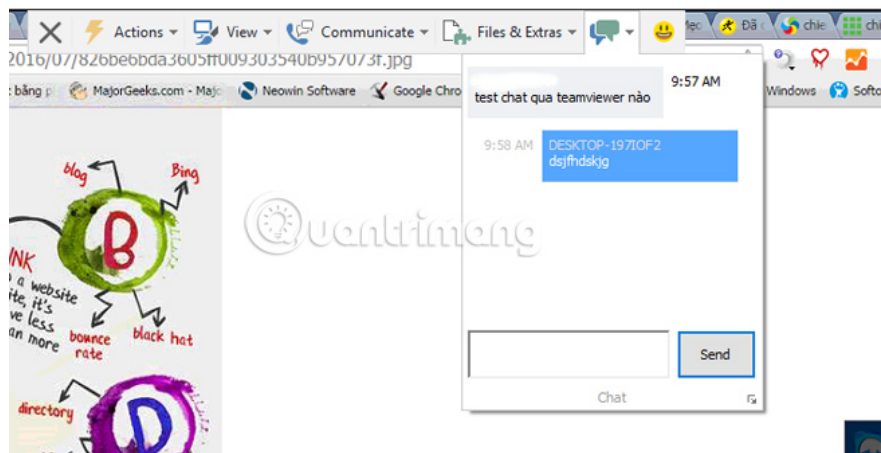

You wait a few seconds to connect 2 computers. **Note** , the network speed will affect more or less that connection speed.

Soon, the two computers will connect to each other. Your computer can access the partner's computer. The screen of the partner's screen will appear on your computer.

At the top control bar, the **Communicate** section is used to communicate between the two parties. You select **Chat** to chat with partners.

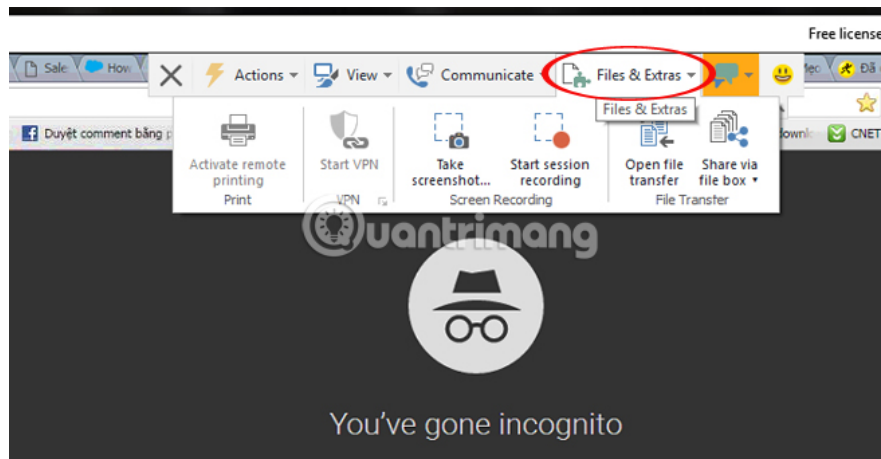

A chat frame appears so that we can message freely.

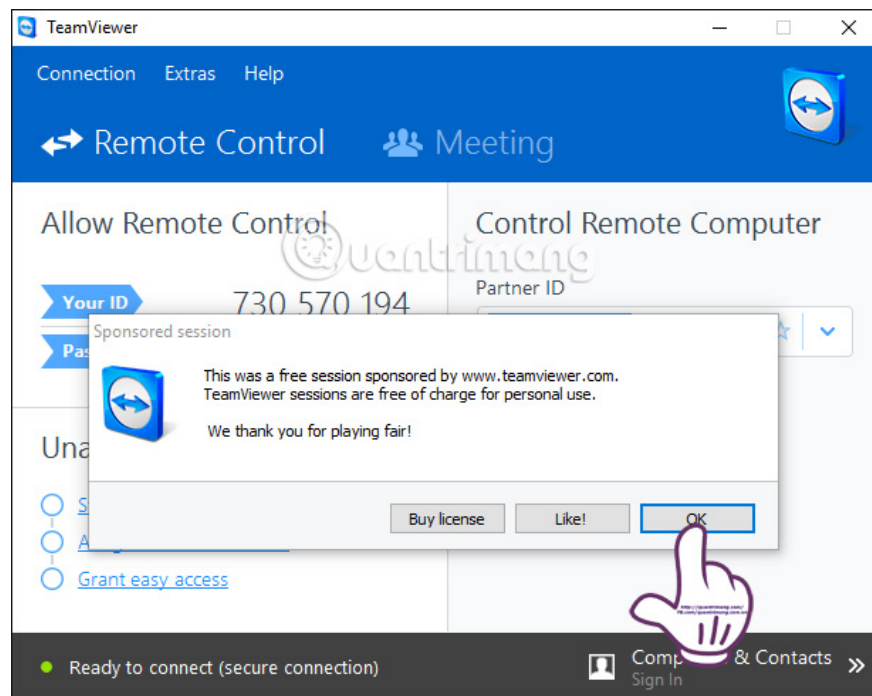

In addition, you can also choose to exchange via video with a headset connection. You can now control your computer and exchange it via chat or video framework for your convenience

If there is a need to **exchange files** between two computers, you can go to **File & Extra** to open the transferred file between the two computers.

Finally, when you have finished the remote access process between the two computers, turn off TeamViewer to end the session.

Above, we have shown you how to use the most basic software for remote control TeamViewer. Hopefully with this article, you can exploit the powerful control features of the software to cater to your business needs, increasing your work efficiency.

If you only need to use TeamViewer once, do not intend to install this software on the computer continuously, you can refer to the instructions for using TeamViewer without installing it from [TipsMake.com](https://www.tipsmake.com).
