Instructions for online photo editing

The first interface that you see is the image loading interface, you have 4 source image options to choose the image to edit:

- **Browse:** select image from computer.
- **Open URL:** open the image from a url address.
- **Webcam:** take pictures directly from the webcam.
- **Collage:** select multiple images.

After selecting the image, you will enter the image editing interface. Here you have 6 options for editing photos:

Adjustment: when you select this option, there will be a lot of tools appear to help you edit images in the best way. Some of the tools in Adjustment are heavily used to edit images:

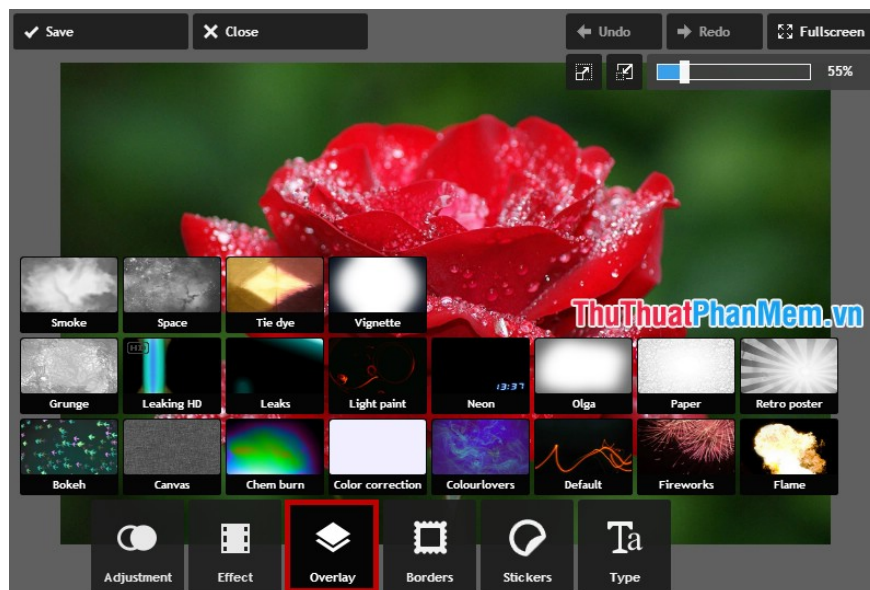

- **Focal:** a tool that helps you choose a focus point and blur around.
- **Doodle:** painting tool on the image.
- **Add image:** add another image to the image being edited.
- **Crop:** image cropping tool in proportion or arbitrary size.
- **Resize:** resize images.
- **Rotate:** rotate the image.
- **Auto Fix:** automatic color balance for images.
- **Color:** adjust the color for the image.
- **Contrast:** adjust the contrast, brightness for images.
- **Red Eye:** remove red eye in images.

Effect: Effect option helps you create effects for images, each option in Effect will have many different effects with names and illustrations to help you easily choose.

Overlay: In Overlay are lighting effect options, overlay effects, similar to Effect when you select an effect option, there will be many other effects.

Borders: frames, borders for photos.

Stickers: add funny sticker icons for vivid images.

Type: add text and text to the image.
