What is Android emulator?

Android emulator is a software that allows you to run the Android operating system on your personal computer. It is a virtual environment that helps you simulate the operation of an Android device on your computer so that you can run and use Android applications or games on your desktop or laptop platform. Therefore, this emulator is always the software of choice to guide gamers **to play games on computers** .

Instructions for playing games on computer using Android emulator

Now, you have a good understanding of Android emulators. Here TipsMake will **guide you to play games on your computer** using Android emulators in the most detailed way you can refer to.

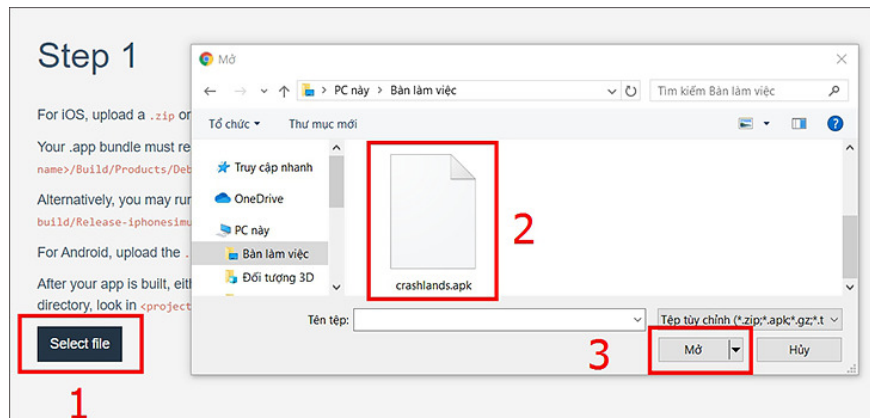

Emulate Android on web browser with Appetize

To play this game on your computer, you need to prepare the following items:

1. A computer with Internet access.
2. APK file of the Android software you want to use.
3. A web browser on your computer such as: Google Chrome, Firefox, Edge,.

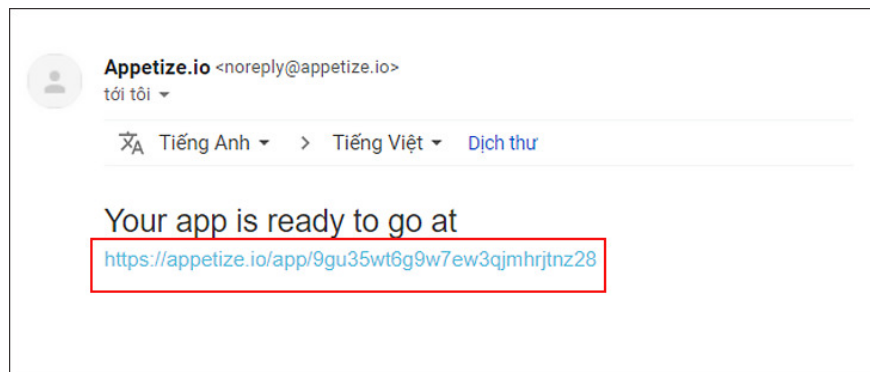

Step 1: Upload APK file

First, go to the Appetize.io website, then on the main interface, select the 'Upload' option. Next, click on 'Select file' and select the APK file of the game you want to play and select open.

Step 2: Install the downloaded emulator software

Once the download is successful, enter your email address and click 'Generate'. Next, check your email and look for the email from Appetize.io, then click the link in the email.

When you click on the email, you will see an interface that shows the following options:

1. Select the simulation scale for the device.
2. Select the emulator model you want to use.
3. Select the version of Android operating system you want.
4. Device color.

Use your mouse to scroll down, open the Wi-Fi settings, then select "Wi-Fi" and connect. Click "Install" and wait a few minutes for the game emulator to install.

Instructions for playing games on computers using emulators directly on computers

Items to prepare include:

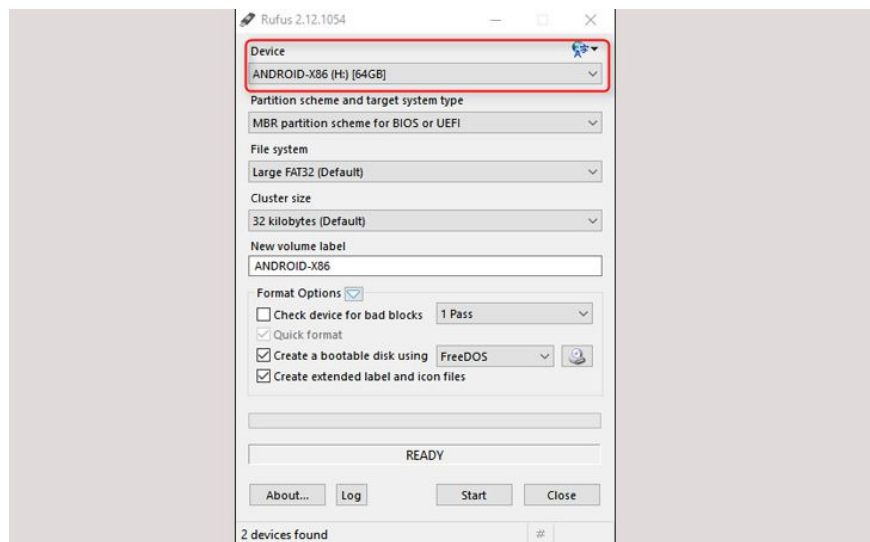

1. Download the 64-bit or 32-bit Android ISO file (depending on your computer configuration) at: <https://www.fosshub.com/Android-x86.html>.
2. Download Rufus software at: <https://rufus.ie/vi/>
3. A USB or external hard drive with a capacity of 4GB or more.

Step 1: Set up parameters on Rufus application

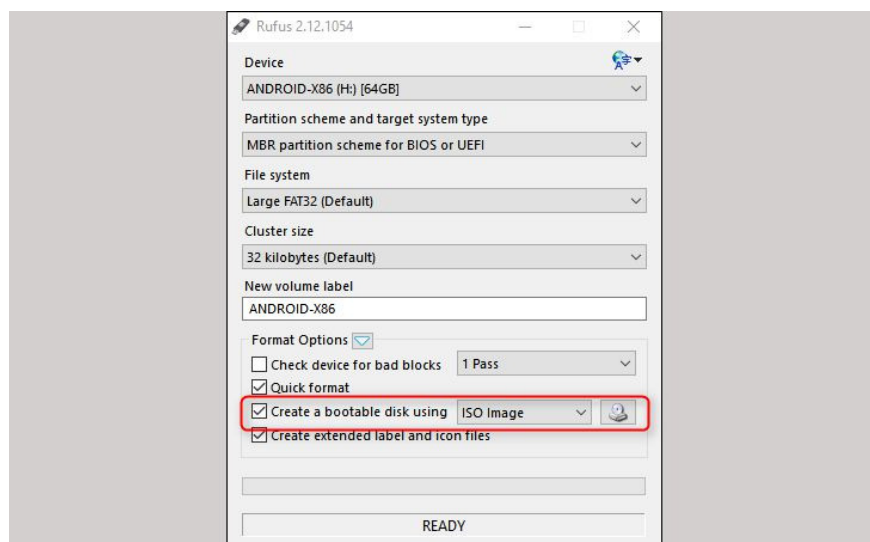

First, connect the USB to your computer, then open the Rufus software that you just downloaded. On the screen, you will see a message appear and click "Yes" to allow the application to change the device.

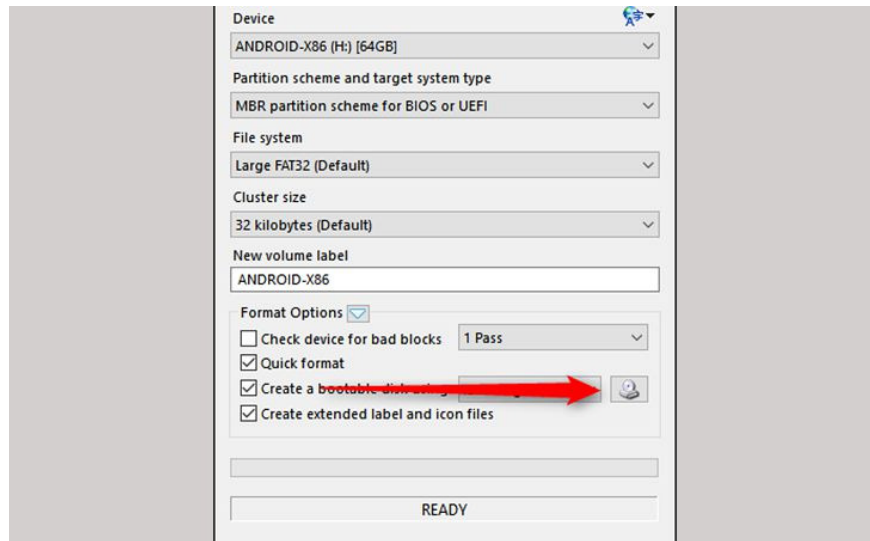

Under "Device", select the name of the Android ISO file you downloaded.

You check "Create bootable disk using" and select "ISO Image" from the menu.

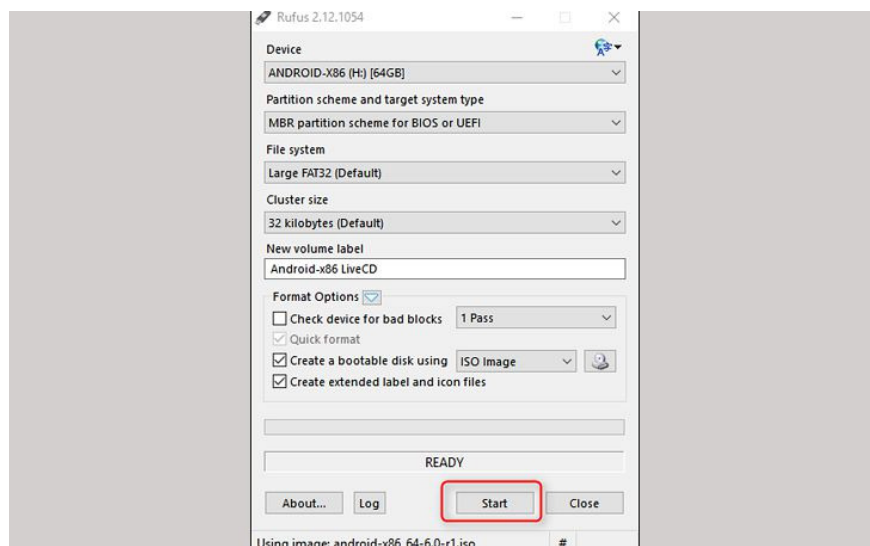

Next to "ISO Image," click the CD drive icon to select the Android x86 ISO file you downloaded.

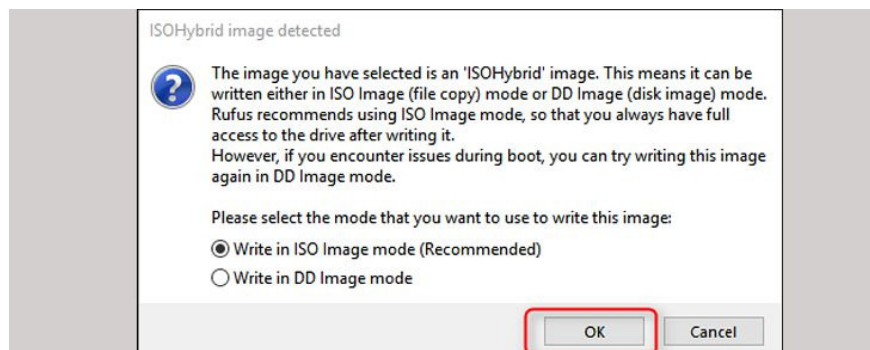

Step 2: Install Android game emulator on computer

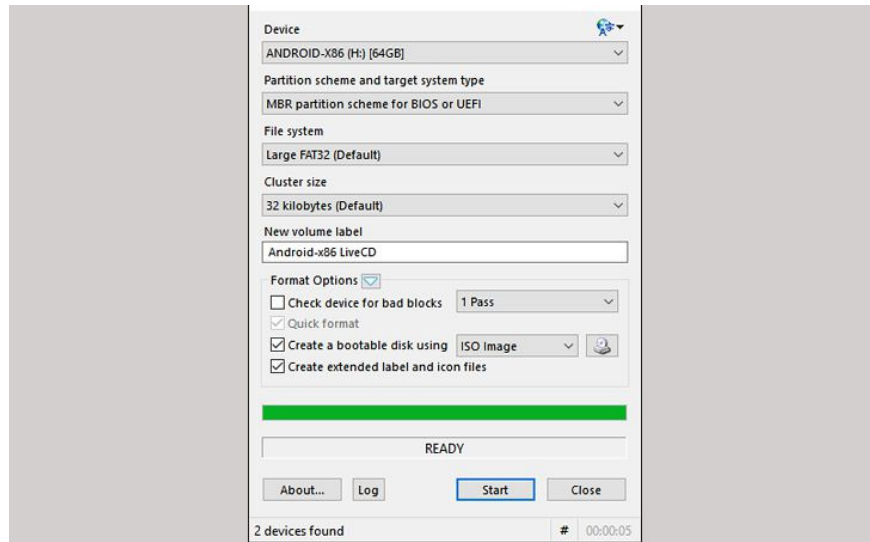

Now the uploaded file will check the settings that have been made. Then press "Start" to begin the installation process.

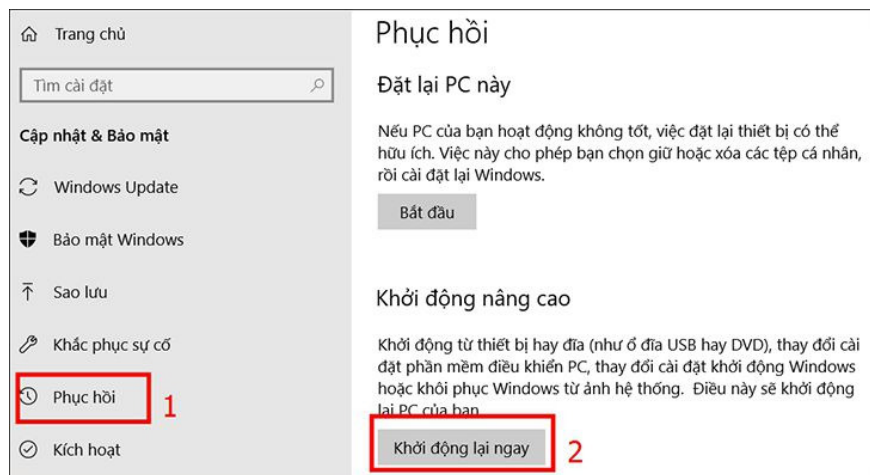

Next, check the box "Write in ISO Image mode" and press "OK" to confirm.

Then, click "OK" to continue and wait a few seconds for the installation to complete. Once the installation is complete, you can close the window and remove the USB. Next, you need to restart your computer by going to "Settings" => "Recovery" => "Restart Now".

Finally, activate Boot Options (depending on the model, for example, HP laptop press F9, Dell laptop press F12) on the keyboard. Then, a window appears, select "Android-x86 9.0-r2 Live". The familiar Android interface will appear, and you can start experiencing.
