

# Instructions for projecting the iPhone screen on the computer

AirPlay feature helps users to project iPhone screen to Mac or Apple TV computer. So how to show or project an iPhone screen on a Windows computer or laptop?

The need to display the iPhone or iPad screen on the computer is not missing when there are many supporting software. Previously, we showed you how to use Reflector 2 to support the presentation process. In this article, Network Administrator will introduce you to the new software LonelyScreen has a fairly simple way to use it.

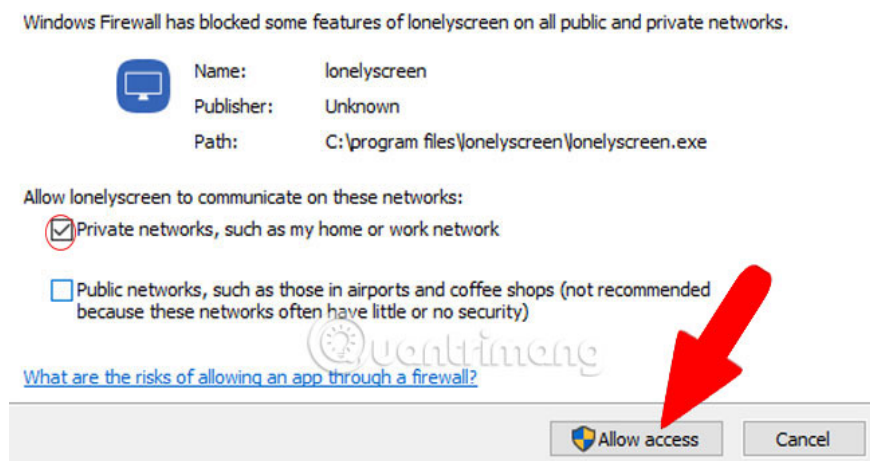

LonelyScreen supports users to turn their iPhone or iPad screen onto a computer as an Apple TV, without having to install any other supporting software on an iOS device.

## Project your iPhone screen on your computer using LonelyScreen

### Step 1:

Download and install LonelyScreen software to your computer.

**Note** , if the computer runs Windows Firewall and receives the message as shown below, check the **Private network . box** . Public networks should not be selected . due to low security. Check on **Allow access** to continue.

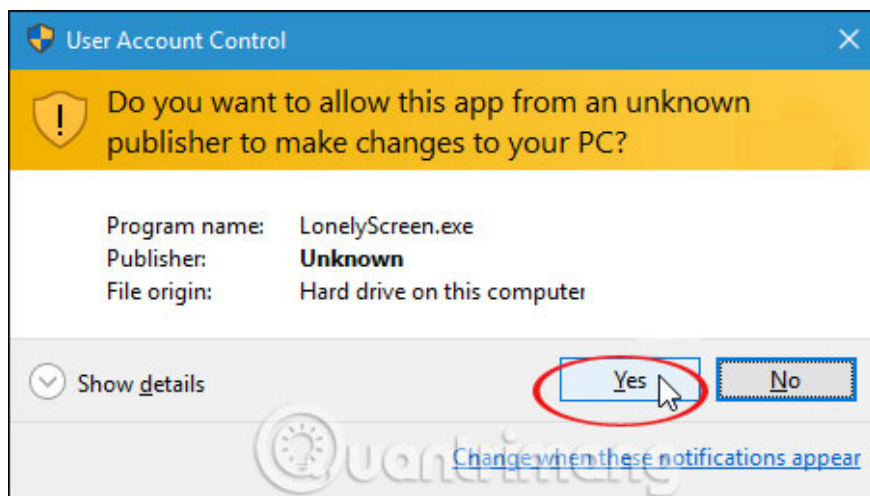

### Step 2:

Show the program interface. Click **Fix It** (Administrator).

If the computer has a **User Account Control** window, click **Yes** to allow LonelyScreen to receive information.

### Step 3:

The LonelyScreen main screen appears. You can rename the screen when you click on the rename and click **Save** to save the new name.

**Step 4:**

Open iOS device and connect to WiFi.

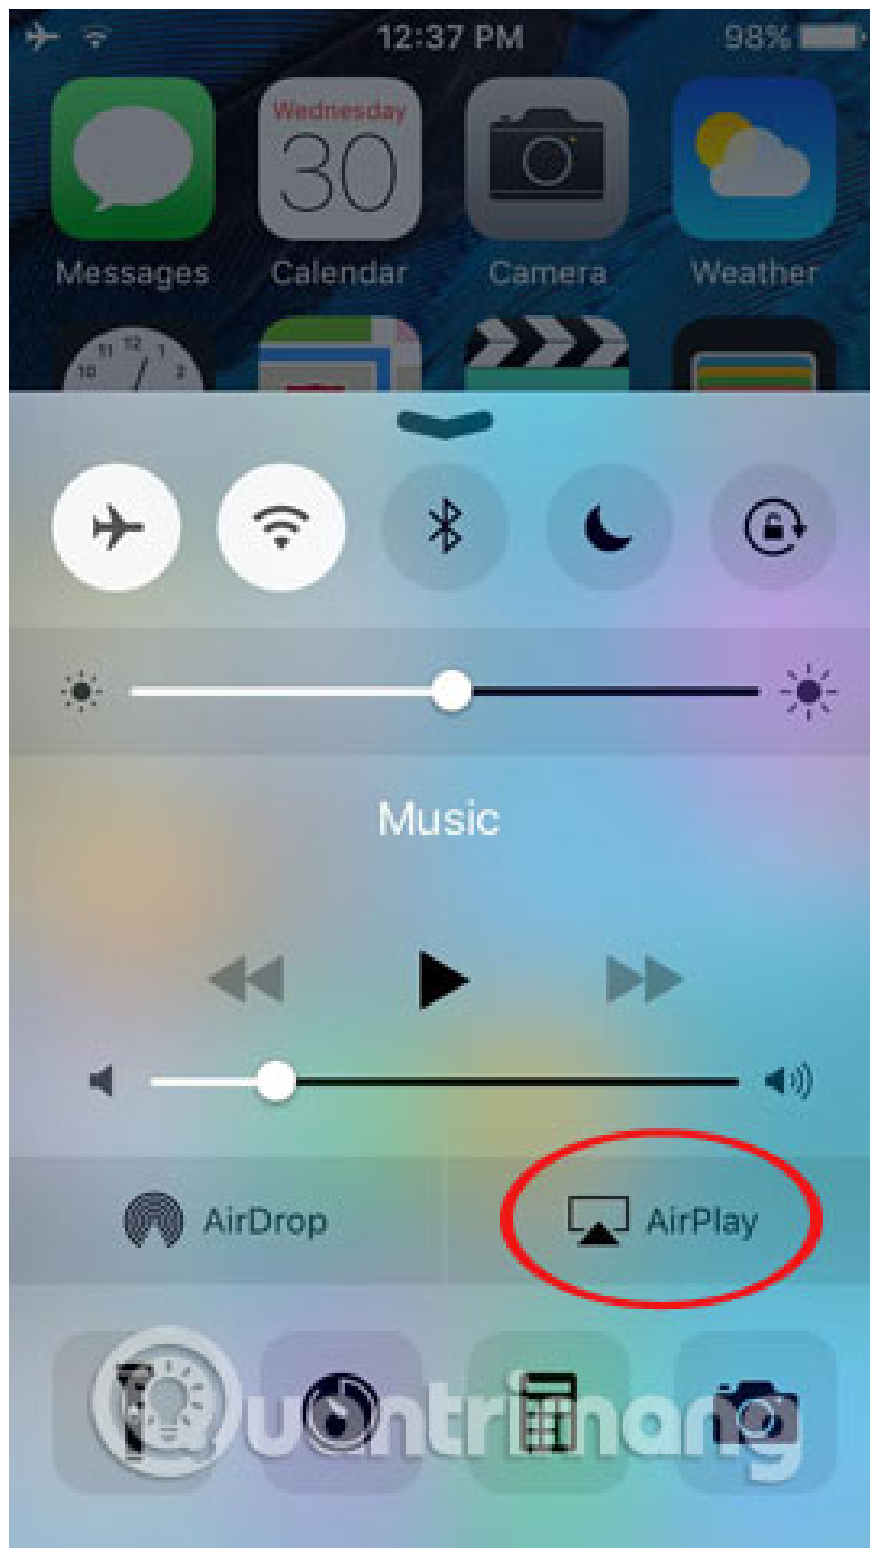

**Note** , the computer running LonelyScreen software is required to connect to the same WiFi network with the phone. Do not exit the program while connecting to an iOS device.

**Step 5:**

In the main interface, swipe up to access the **Control Center** .

**Step 6:**

When the computer and iOS device connect with WiFi, **AirPlay** will automatically be updated. Click AirPlay.

**Step 7:**

AirPlay interface appears. Here, you will see the LonelyScreen screen just saved on your computer. Click it to appear **Mirroring** .

Start Mirroring by swiping the slider to the right and clicking **Done** to finish.

## AirPlay

Done

 iPhone

With AirPlay Mirroring you can send everything on your iPhone's display to an Apple TV, wirelessly.

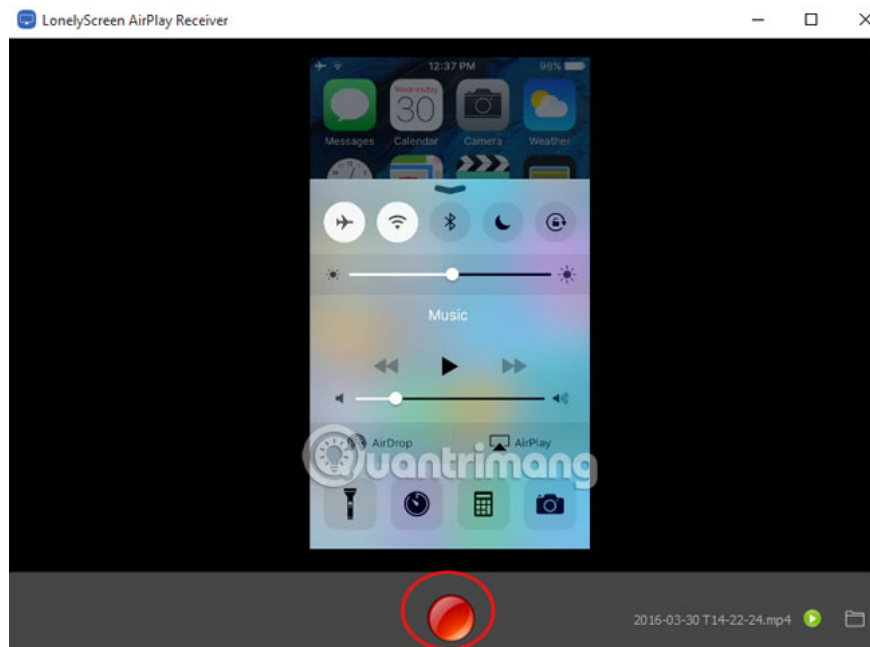

**Step 8:**

Once done, the computer screen will appear the screen of the iOS device. Zoom in or out of LonelyScreen window to see more clearly the iPhone / iPad access activities on your computer.

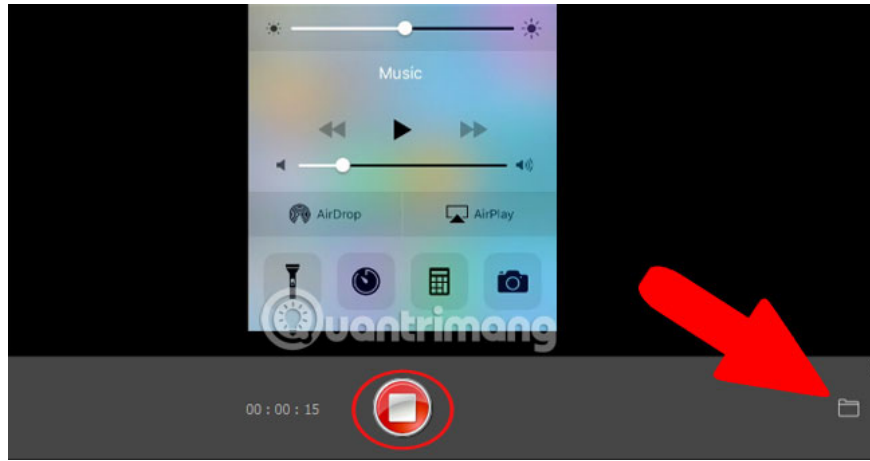

### Step 9:

LonelyScreen also allows users to record videos. Click on **the circle icon** below to make the video recording process.

Click on the square to stop recording and your video will be saved. The saved video will appear with a blue circle icon. If you want to access the folder containing the video, click the folder icon next to it.

### Step 10:

To exit the program, click the left mouse button on **the alias icon** and select **Exit LonelyScreen** .

Thus, you have completed the iPhone / iPad presentation process on your Windows computer using LonelyScreen, even recording videos.
