However, in the process of cleaning up your browser accidentally deleting important link addresses, even delete the entire boobookmark in your browser. Luckily, both Chrome and Firefox back up user bookmarks, so you can use bookmark backups to restore deleted bookmarks on Chrome, Firefox. In the article below, Network Administrator will guide you how to retrieve all bookmarks on Google Chrome and FireFox browsers, when we accidentally delete them.

How to restore bookmarks on Google Chrome

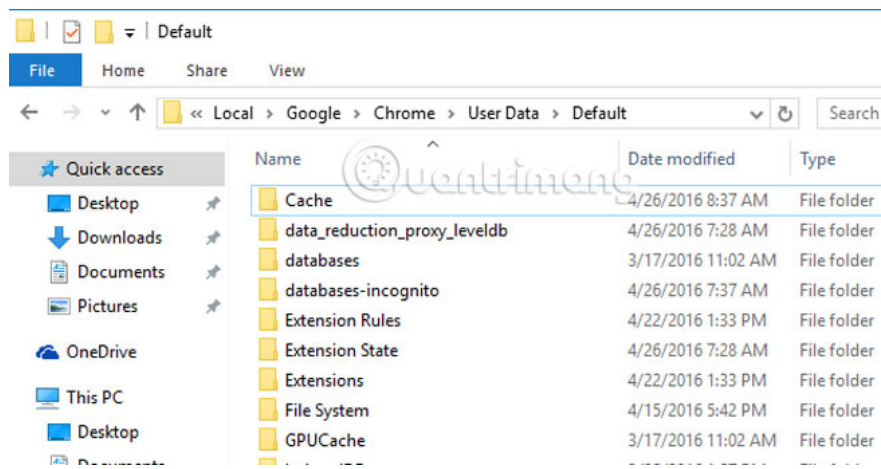

Chrome's bookmark manager doesn't have an Undo option. Sometimes accidentally, you can delete the entire folder containing bookmarks on Chrome without any obvious way to recover them. If you've created a backup using the bookmark export option on Chrome, you can import a backup - but that backup may be outdated.

Important note: If you accidentally delete bookmarks on Chrome, close all open Chrome windows, but don't reopen the Chrome browser. If you have closed Chrome, leave Chrome in the closed state. Chrome only backs up a single bookmark file and this file will be overwritten every time you launch Chrome. To find the entire bookmark, follow these steps:

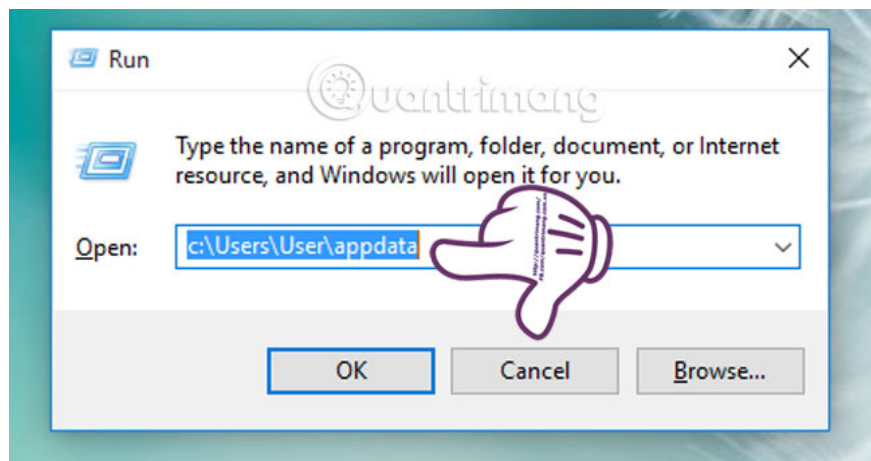

Step 1:

You click on Chrome the following link **chrome: // version /** , scroll down to see the **Configuration Path** section, copy the link, open **Windows Explorer** in the computer with the link, usually the default path will be as follows:

```
C: UsersUSERNAME\AppData\Local\Google\Chrome\User Data\Default
```

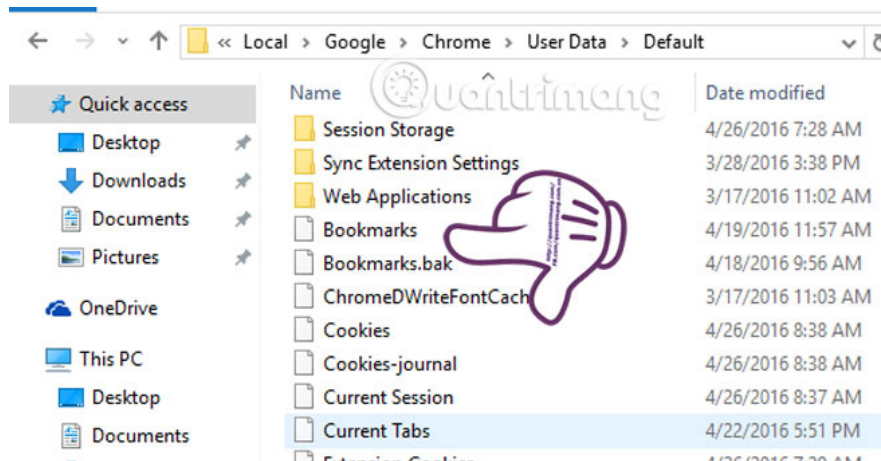

USERNAME is the account on the computer. If your AppData file is hidden it can be searched in the Run window of your computer.

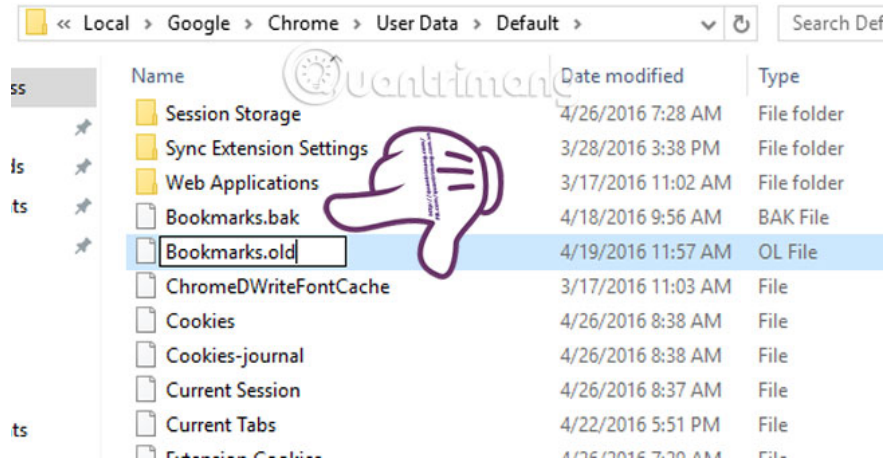

Step 2:

At the Default interface, we will see there are two important files: **Bookmarks** and **Bookmarks.bak**. In it, Bookmarks is creating the current bookmark, while Bookmark.bank is the previous backup file that you want to restore.

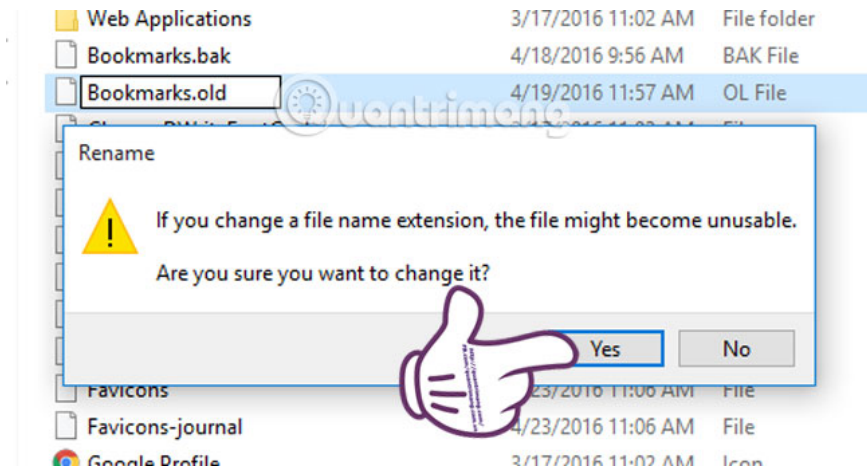

Next we rename the 2 files: **Bookmarks into Bookmarks.old** and **Bookmark.bank into Bookmarks** .

Step 3:

In the process of renaming, a message board will appear to ask if you are sure of the operation, click **Yes** to confirm.

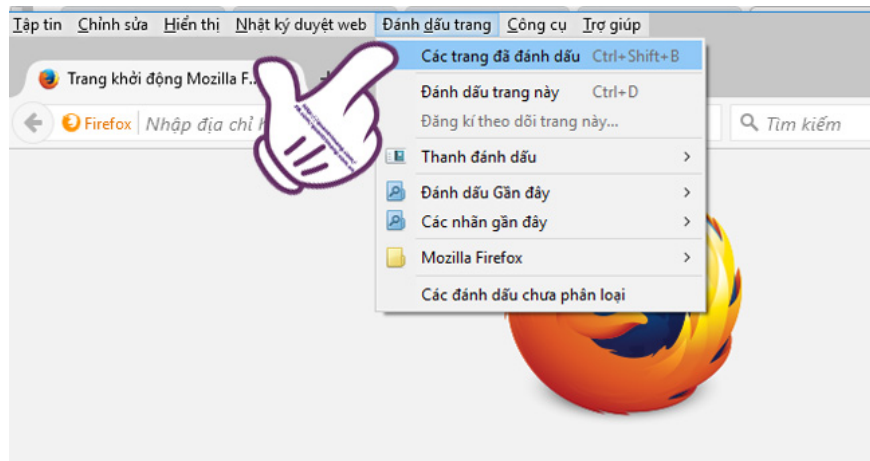

So you can retrieve those bookmarks that were accidentally deleted from Chrome browser.

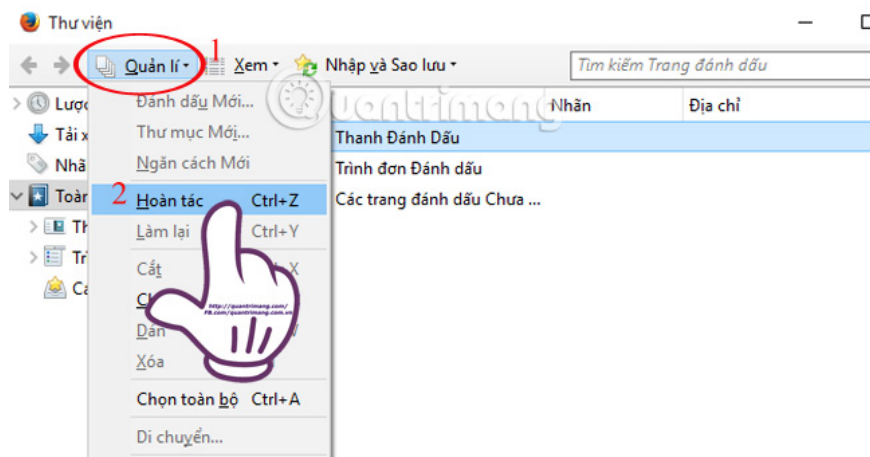

How to restore bookmarks on Firefox

Similar to Chrome, we will do simple things to get the bookmark back even after restarting Firefox multiple times. It keeps a list of 10 latest bookmark backups, unlike Chrome only one.

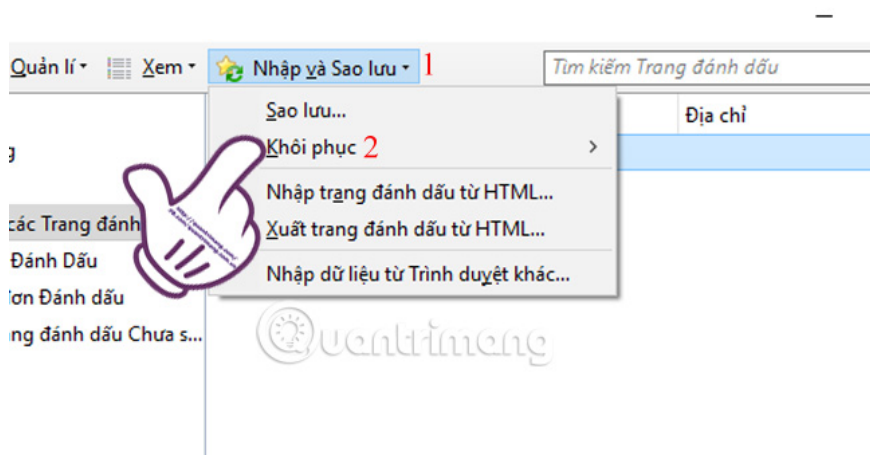

1. You open up Firefox browser, access Firefox menu and select **Bookmark**. Then select **Bookmarked pages** (Show All Bookmarks). Or we can use **Ctrl + Shift + B** to open.

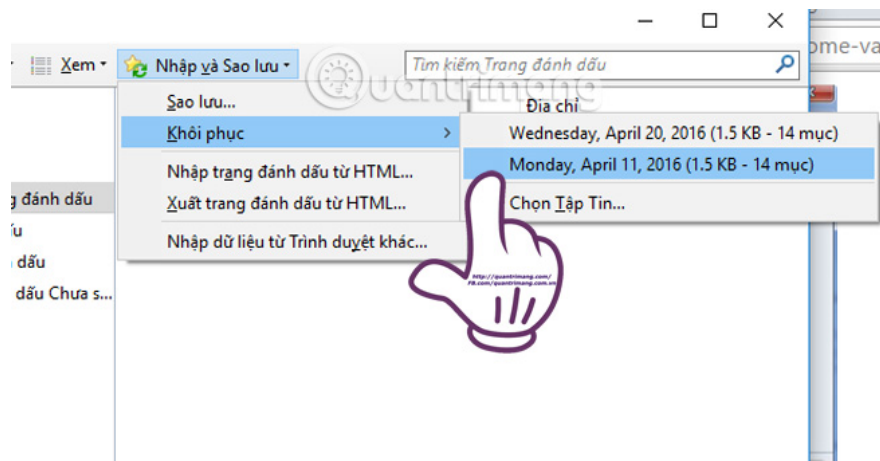

1. At the main interface of **the** Library, we can restore the newly deleted bookmark by clicking on **Manage** (Organize) and selecting Undo. Or use **Ctrl + Z**.

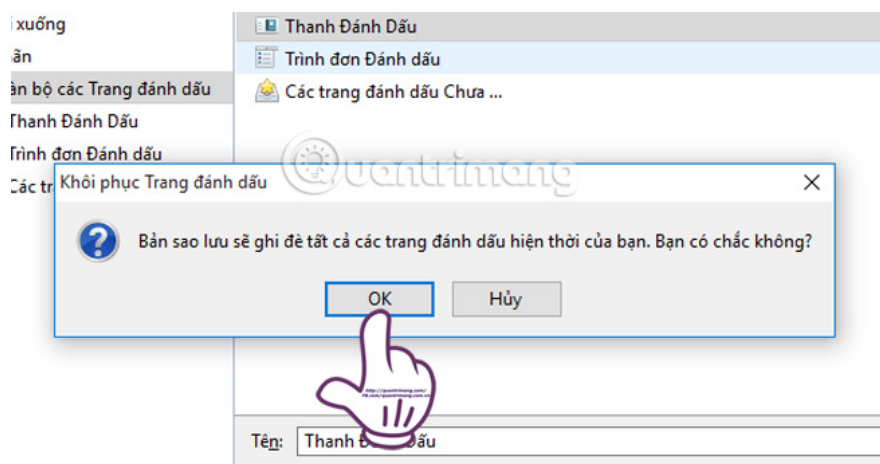

1. In addition, Firefox allows to create automatic backup for periodic bookmarks. If we accidentally delete the bookmark a few days ago, we can restore it, thanks to this feature. **Enter** Import and Backup (Import and Backup) select Restore.

1. When you hover over Restore, you will see a list of previously saved backup bookmarks. Select the bookmark file to restore.

1. A message board showing the current backups will be deleted. If you agree click **OK** to proceed with the recovery process.

As such, we can restore the entire bookmark on either Chrome or Firefox browsers. Even with new bookmarks deleted or deleted a few days ago can be recovered.
