

Instructions for removing background online, no need to install Photoshop

When editing and cropping photos, we often want to remove unwanted background images. Normally, when we want to do this, we must install Photoshop. But don't worry, below is a quick way to remove backgrounds online, without complicated operations!

There are many of you who, after taking a photo, want to edit and crop it to fit into a more magnificent and magnificent frame. In the past, to do this, we needed a graphics computer with a fairly good configuration or at least a computer that could run Photoshop. This makes it difficult for many of you to edit your photos. Don't worry, today TipsMake will guide you on how to remove backgrounds online without Photoshop and the operation is extremely simple.

Summary of online background removal methods

Currently, there are many websites that support you to perform background removal online. Below are some of the best quality addresses that TipsMake has compiled.

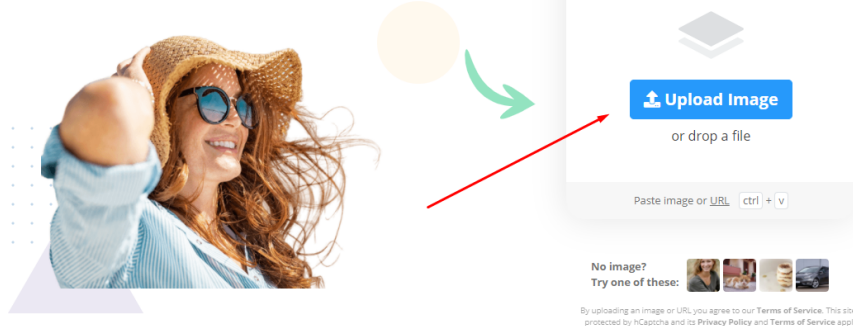

Remove background online with Remove.gb

In terms of top 1 online background removal tools, Remove.gb is the name that deserves to be nominated first. As a free tool, this is a suitable website for those who like to take portraits, selfies, travel photos to post on Facebook.

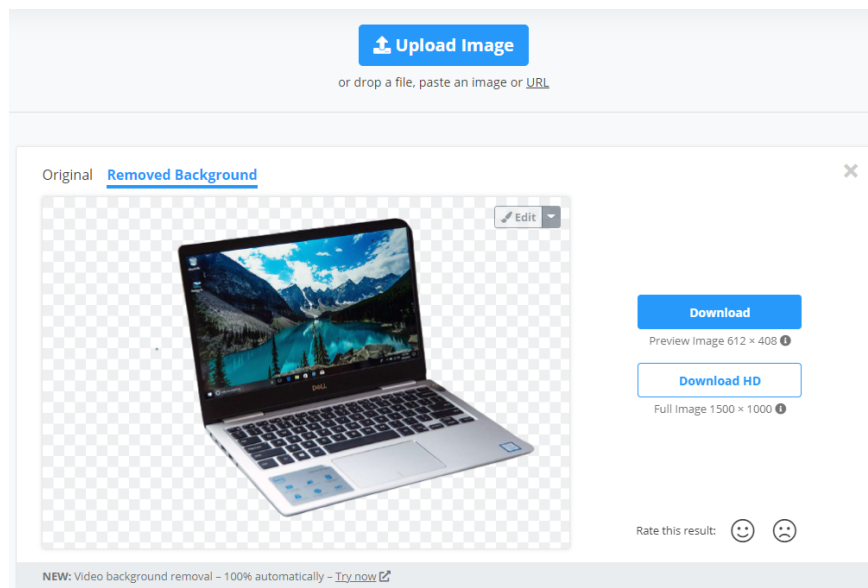

Step 1: Go to the Remove.gb homepage. Select Upload Image to upload the photo you want to remove the background from. In this step, you can also drag and drop the photo into the Upload Image box.

Remove Image Background

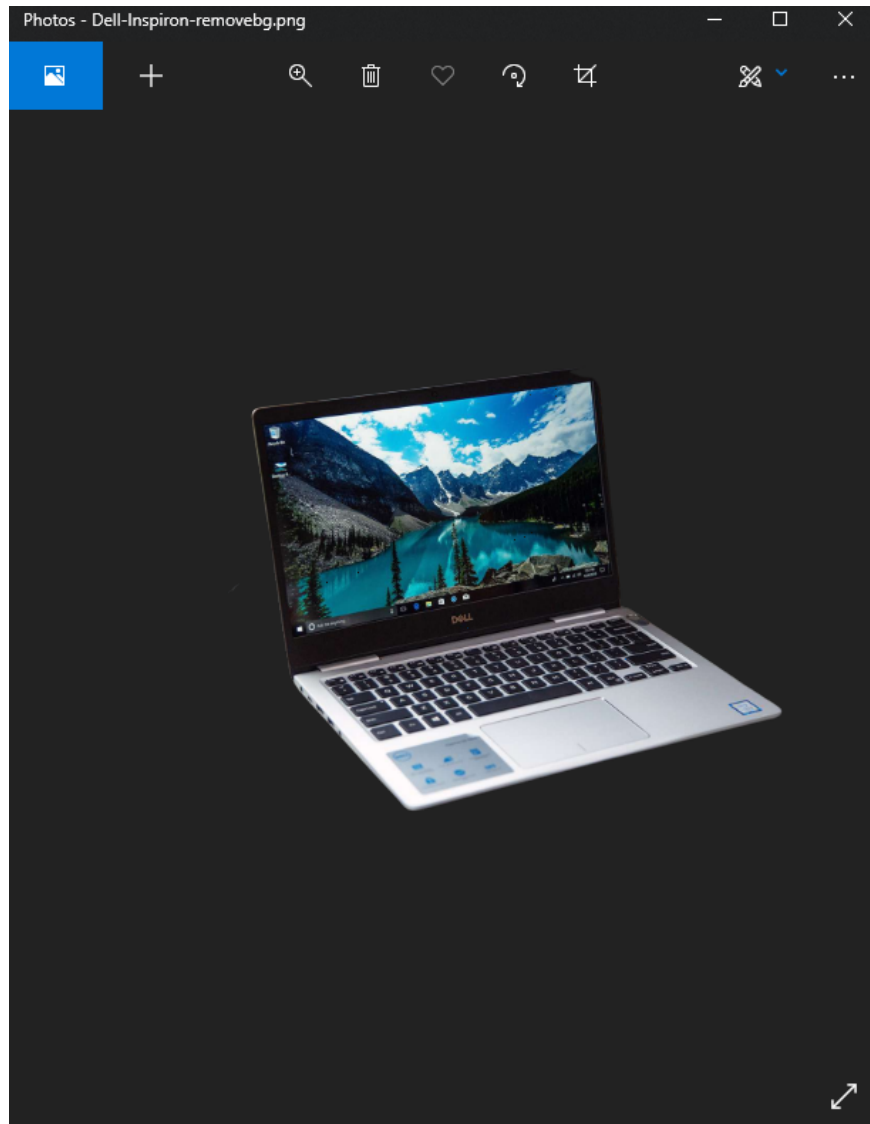

100% Automatically and **Free**

Step 2: Immediately after successful upload, your photo will be automatically processed. The online background removal operation is done in a snap. In less than 5 seconds, you will have a complete background removal photo.

The only thing left is to choose the resolution to download. As in the picture, we have 2 basic options: download at default resolution and HD resolution. And here is the result after downloading.

Remove background online with clippingmagic.com

The second tool that TipsMake wants to introduce is clippingmagic.com. Compared to Remove.gb, clippingmagic.com's background separation is somewhat less smooth. Personally, I find the image still has quite a lot of jagged edges. But in return, clippingmagic.com has integrated many additional features such as editing to add - remove background, attaching background color to the image after separating the background. quite useful.

Similar to other online background removal sites, after accessing the homepage clippingmagic.com, you just need to upload the original photo that needs to be removed. Then everything will be processed automatically.

Magically Remove Image Backgrounds

Fully automatically, then go far beyond the AI

After separating the background, you will immediately see your image with the background separated online.

Here, you will have a toolbar like this:

In which the plus/minus part is to add or remove the selected background; if more detailed, you can use the knife icon to trim it to make it more reasonable. In the tool section below, you can customize the color and background for the separated subject.
