

Instructions for saving offline files with Dropbox on iOS

According to the latest information, Dropbox for iOS has been updated to save the file offline. It can be said that this function is very convenient when you need to download certain files from Dropbox to use when going out on the street, uploading documents at school, downloading files offline so that you can see them immediately without take more time to download ...

According to the latest information, **Dropbox for iOS** has been updated to save the file offline. It can be said that this function is very convenient when you need to download certain files from Dropbox to use when going out on the street, uploading documents at school, downloading files offline so that you can see them immediately without take more time to download .

In addition, if you travel far away, you can also preload maps, photos, directions to be able to open the view immediately, avoid the flickering 3G situation that Wi-Fi does not have. Usage is simple: open Dropbox application, next to any file, press the small arrow button and select **Make available offline** .
