

Instructions for sending attachments with the Mail application in iOS

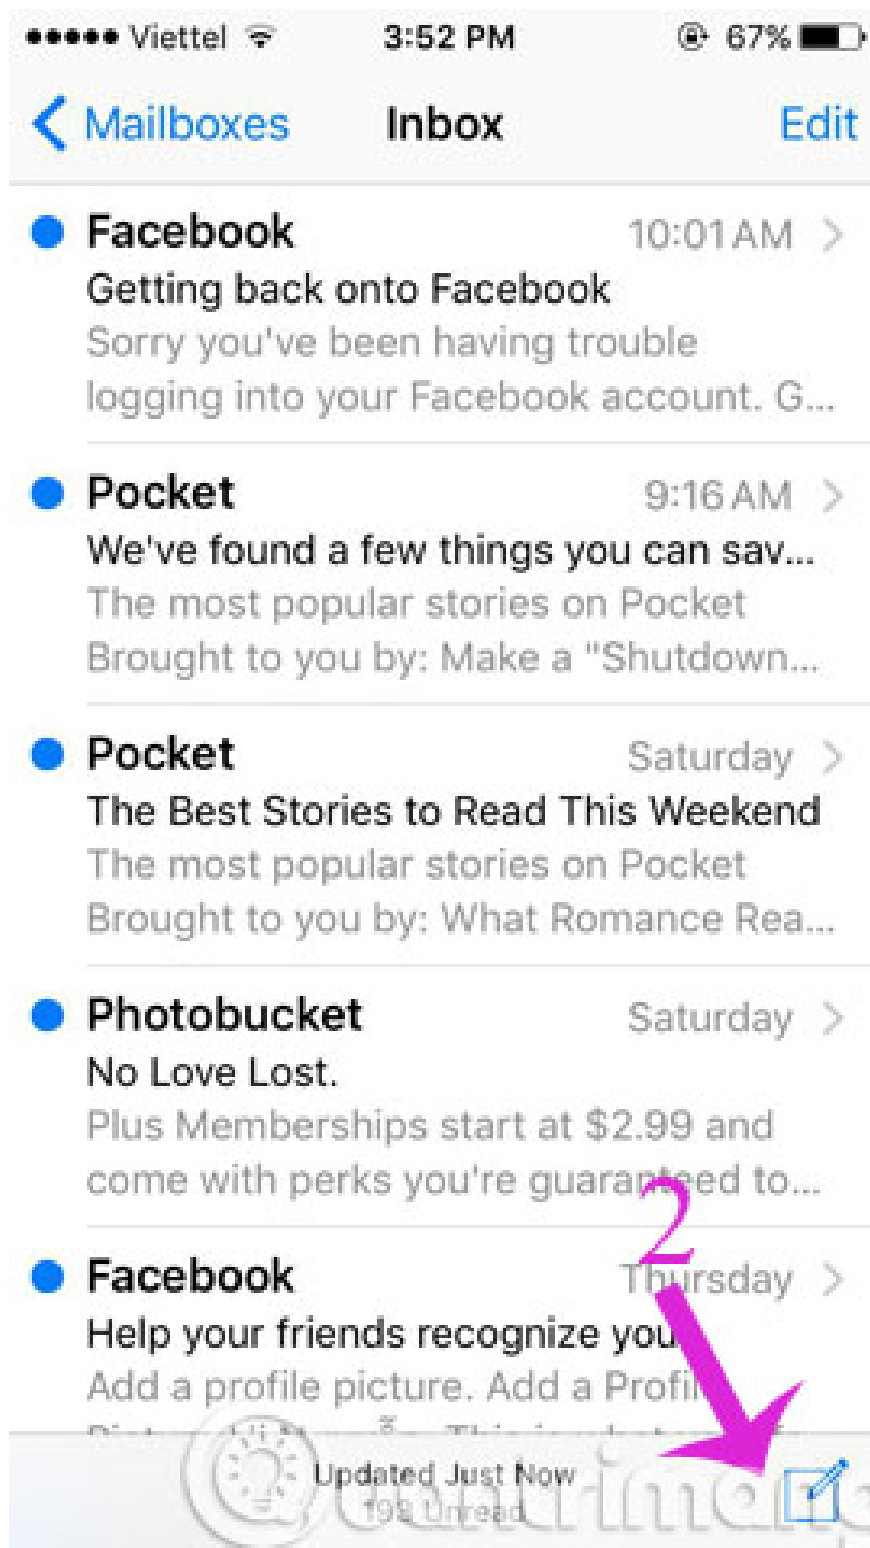

Apple has built-in Mail on iOS application to facilitate users from losing access by web browser when they want to send mail. However, unlike in Gmail, when you want to send attachments with this application, not everyone knows how. Therefore, TipsMake.com will guide you how to send attachments with the Mail application on iOS. Please consult.

Apple has built-in Mail on iOS application to facilitate users from losing access by web browser when they want to send mail. However, unlike in Gmail, when you want to send attachments with this application, not everyone knows how. Therefore, TipsMake.com will guide you how to send attachments with the Mail application on iOS. Please consult.

Step 1:

From the iOS screen, click **Mail** then click on the paper page and pen in the lower right corner to compose a new message

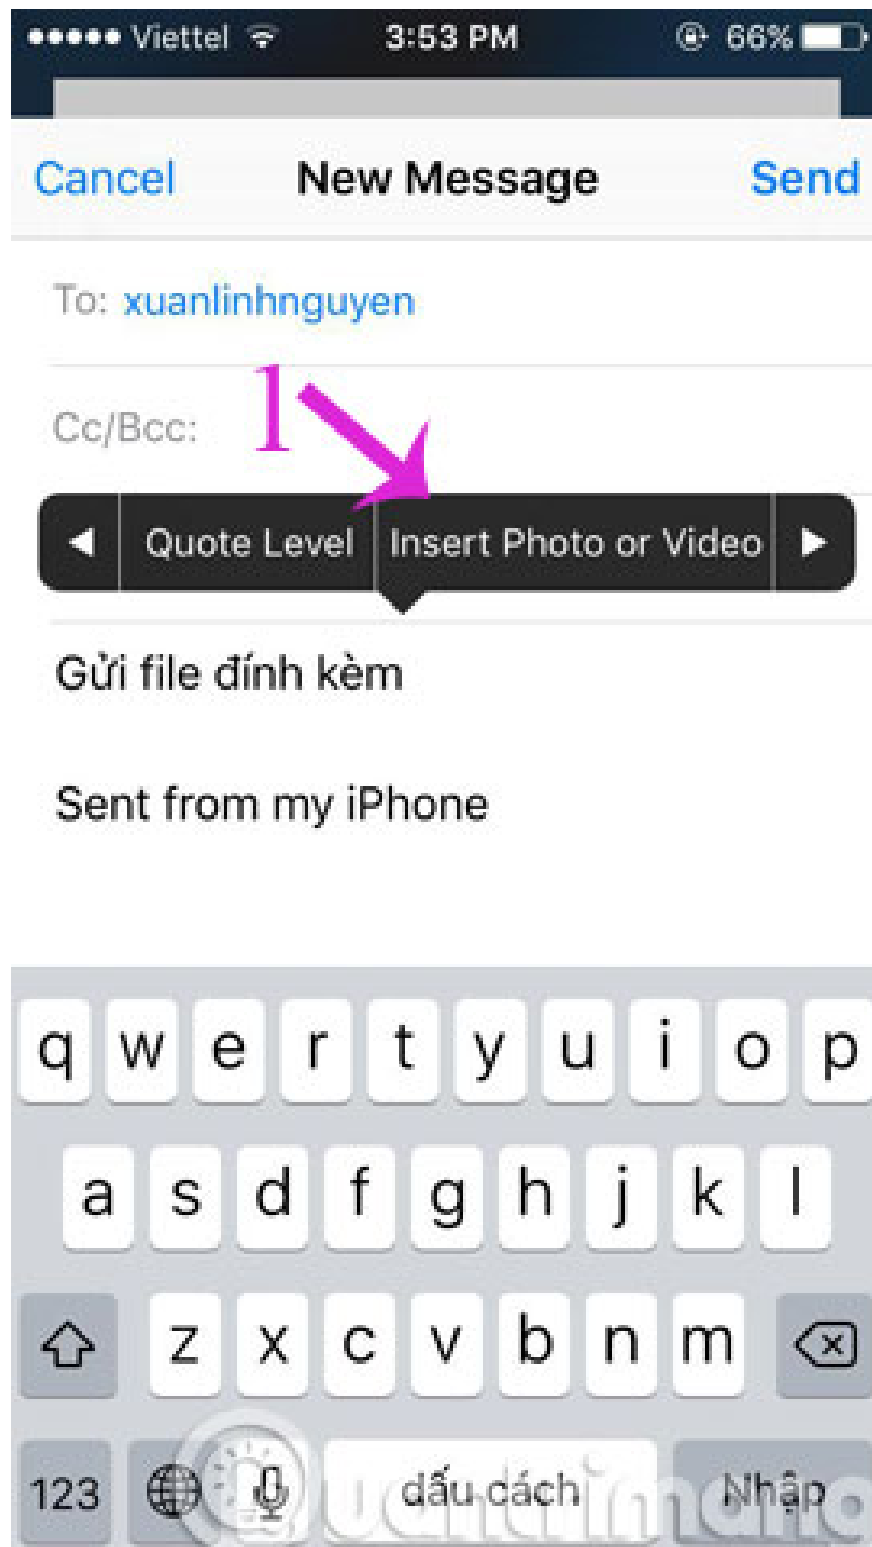

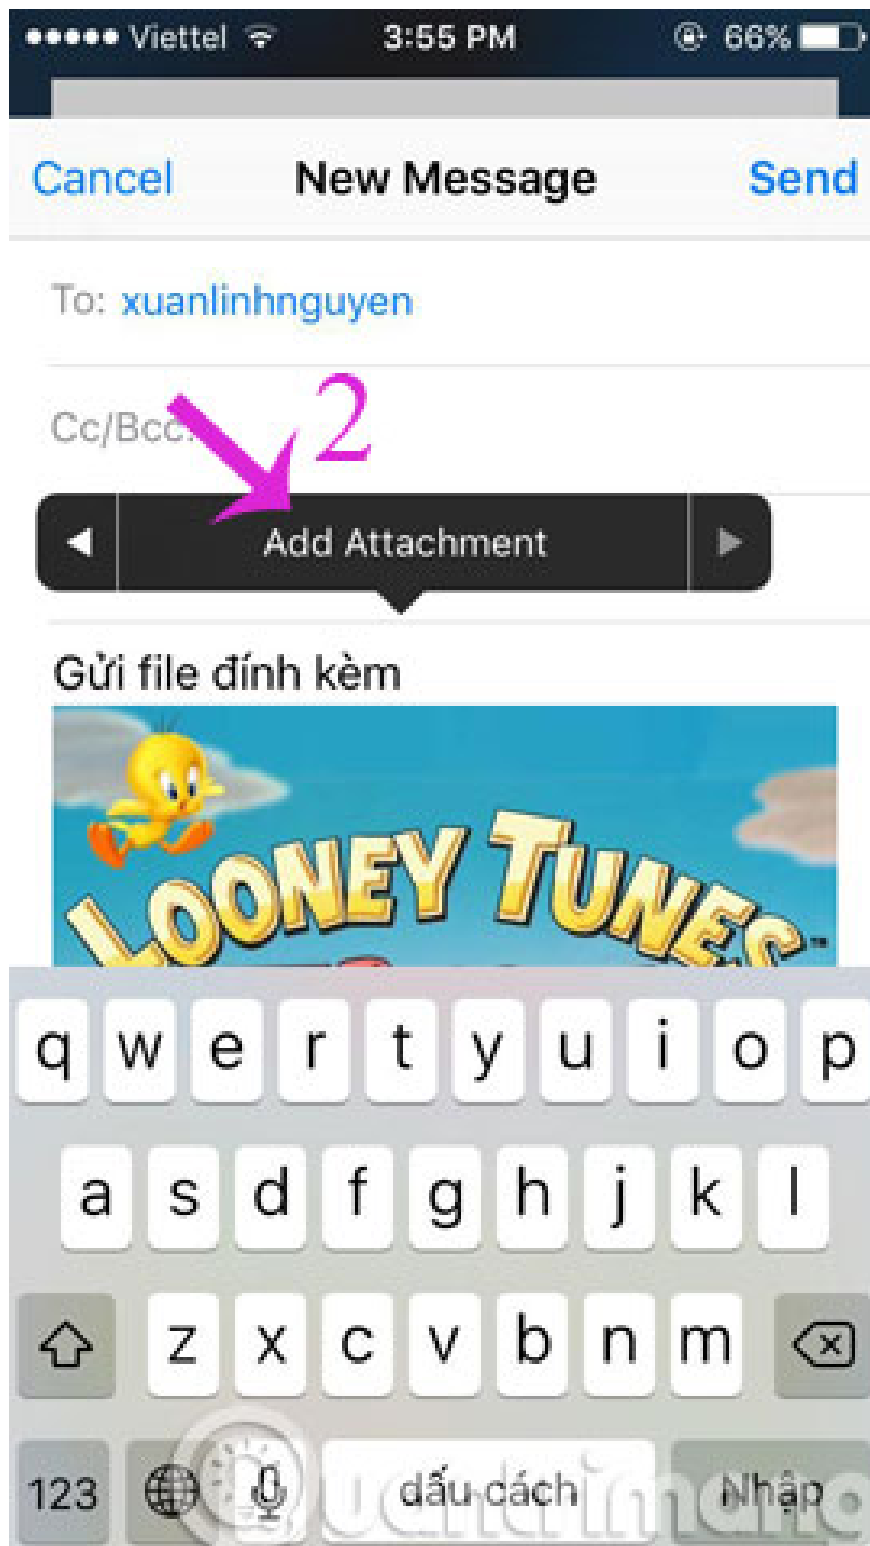

Step 2:

In the next interface, write a normal letter. Then, in the frame to send content, press and hold your finger so that the black menu appears and use it to drag it to the right, you will see **Insert photo or video** appear (insert images and video) and **Add Attachment** (insert other files). Click on it and find the corresponding data.

Note : You will not be able to attach multiple files at the same time, with each operation performed, you can only insert 1 file.

So, did you find it easy to attach files using the Mail application in iOS? Right!

1. Enable Text-to-Speech feature in iOS
2. How to turn off the "Shake to Undo" feature on iOS 9?
3. Instructions for activating Night Shift in iOS 9.3

Good luck!
