

Instructions on how to send emails with attachments on iPhone.

Similar to the Gmail app, the Apple Mail app also has the option to send emails with attached files to assist users in the email sending process.

Similar to the Gmail app, the Apple Mail app also has the option to send emails with attachments to assist users in the email sending process. You can attach images to emails, send files stored in the Files app on your iPhone, or even send drawings if desired. The options for attaching files on the iPhone are diverse, allowing you to choose according to your needs. This article will guide you on how to send emails with attachments on your iPhone.

How to send emails with attached photos on iPhone

Step 1:

On the Mail app on your iPhone, tap **the pen icon** in the bottom right corner. Then, in the email message input field, tap to see the option to send attachments.

To **send photos from the album** , click on **the photo icon** as shown in the image.
