

Instructions for sharing Live Photos on Facebook and Instagram

Live Photos is one of the new features introduced by Apple on iOS 9. Many users still do not know how to share Live Photos on Facebook or Instagram. You can refer to the article below.

Live Photos is one of the new features introduced by **Apple** on **iOS 9** . This feature allows users to view live and vivid images. However, **Live Photos** can only be shared among iPhone users. How to share **Live Photos** with everyone. The following article will help you take steps to share **Live Photos** with everyone.

The best way to easily share photos **Live Photos** is convert to **animated images - GIFs**. To convert **Live Photos** to animated images (**GIFs**) , first use the connection cable to connect your iPhone to the computer.

1. Copy or move Live Photos image files on Mac:

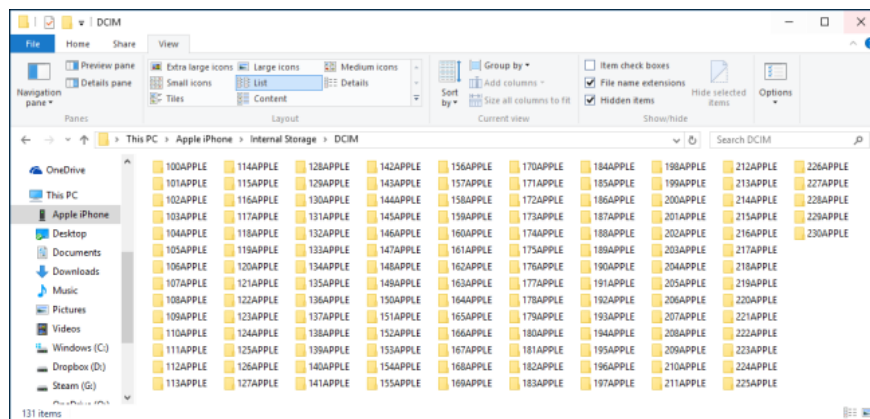

If you use Mac, you can use **Image Capture**.

The next step is to choose the photo **Live Photos** you want to convert. You will see the **JPEG** image **and the MOV file** created at the same time. Select the **MOV file** and save it on your computer to easily convert it.

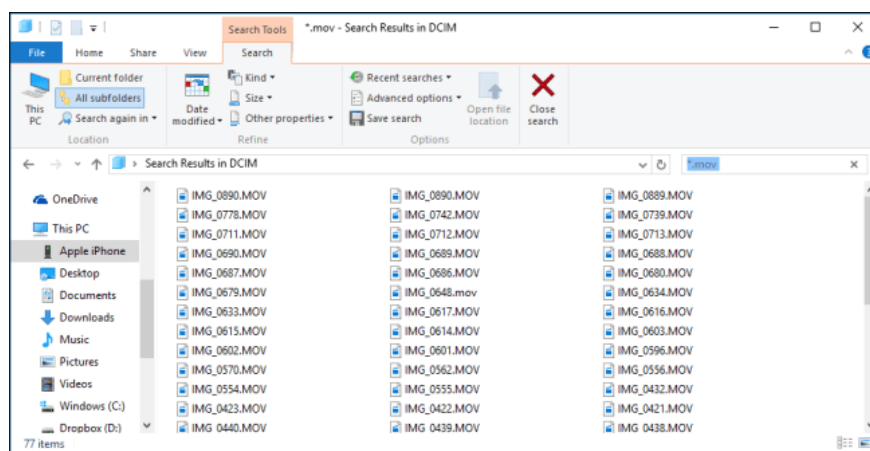

2. Copy or move Live Photos image files on Windows:

If you use Windows, the best way to copy or move **Live Photos** image files from iPhone and iPads is to navigate your **iOS device** to **File Explorer** .

Select the **DCIM** item. All image files are stored in **DCIM**.

Finding each image is quite time consuming, you can use the **String Search** function **'* .mov'** to search. All files on your device ending in **.MOV** will appear.

After searching for the **MOV** file you want to convert, you can use the **GIF- making** application to convert to **GIF animation** format or access the **makeagif** to change the format.

3. Share photos of Live Photos on Facebook similar to sharing animated GIF images:

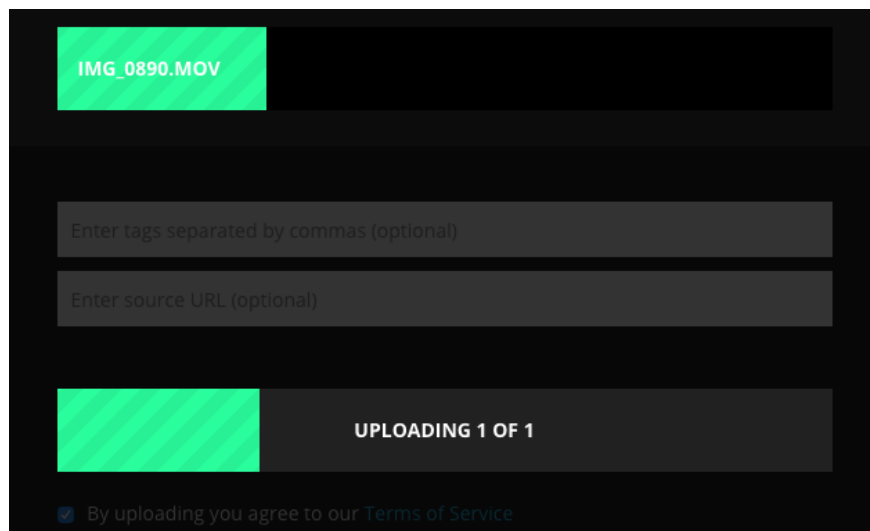

Currently, **Facebook** does not yet have a feature that allows users to share **animated GIFs** onto the timeline, so to share animations you must use the **Giphy** application (Giphy is an application that allows users to share animations on Facebook).

Step 1:

Visit <http://giphy.com>.

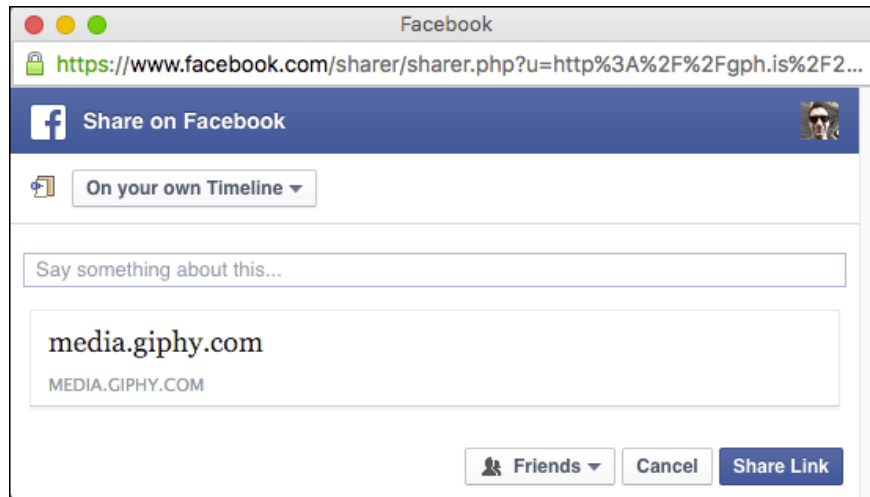

Then upload photos, you can download **MOV** files, Giphy will automatically convert the format to animated **GIFs**.

Step 2:

After converting the format, you can share your photos on **Facebook** .

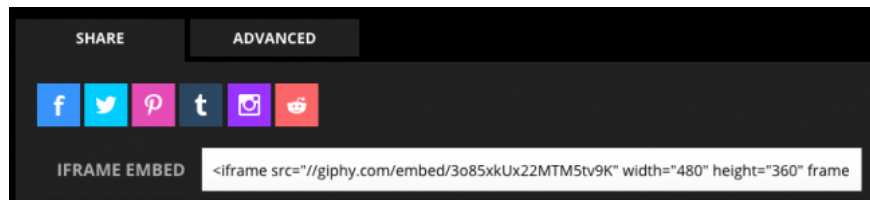

A popup will appear asking you to allow this image to be shared as a link. You can add the associated **Status** if you want.

Step 3:

Then, check your **Facebook** wall, or check **Newsfeed** you'll find the animation you share. Click **Play** to see the animation.

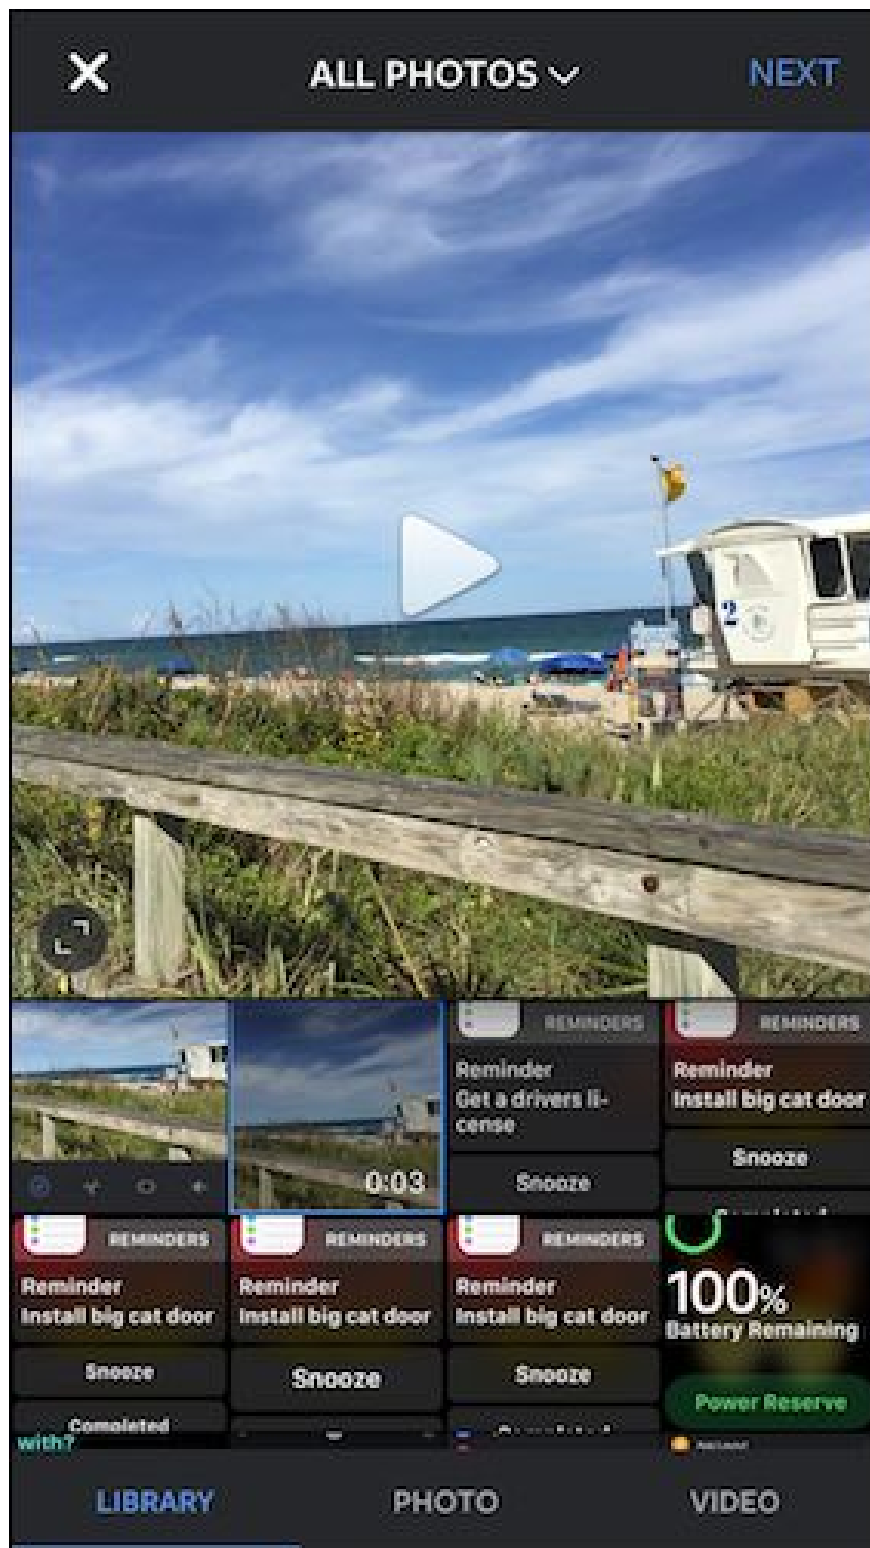

Also you if you want to save new images converted to **animated GIFs** format to your computer, click on **"Advanced"** and download to your computer.

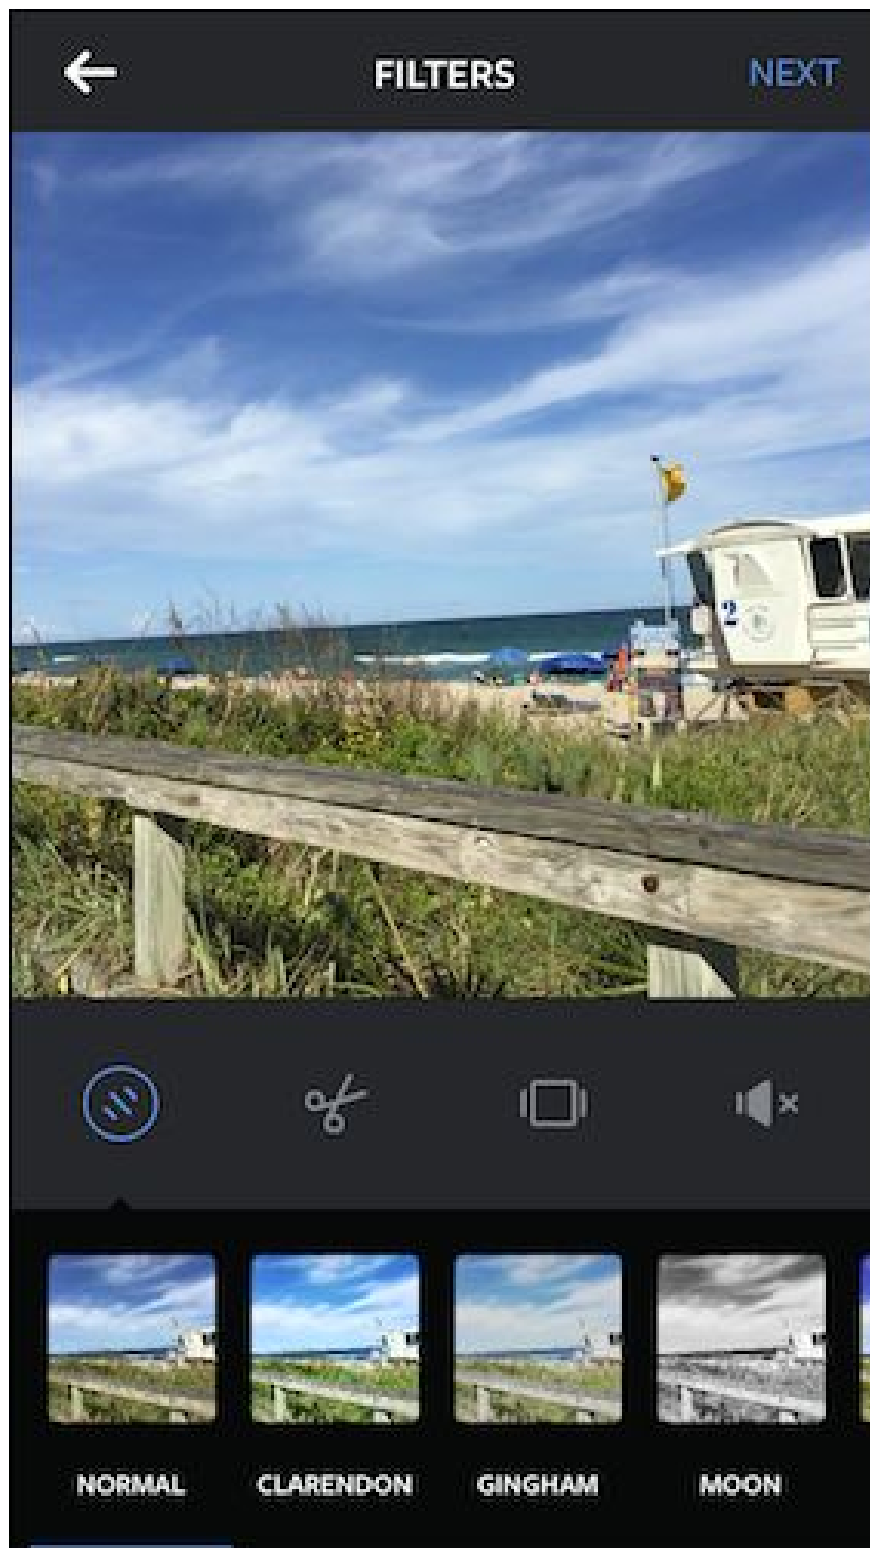

4. Share Live Photos similar to sharing videos on Instagram:

It's quite simple to share **Live Photos** on **Instagram** .

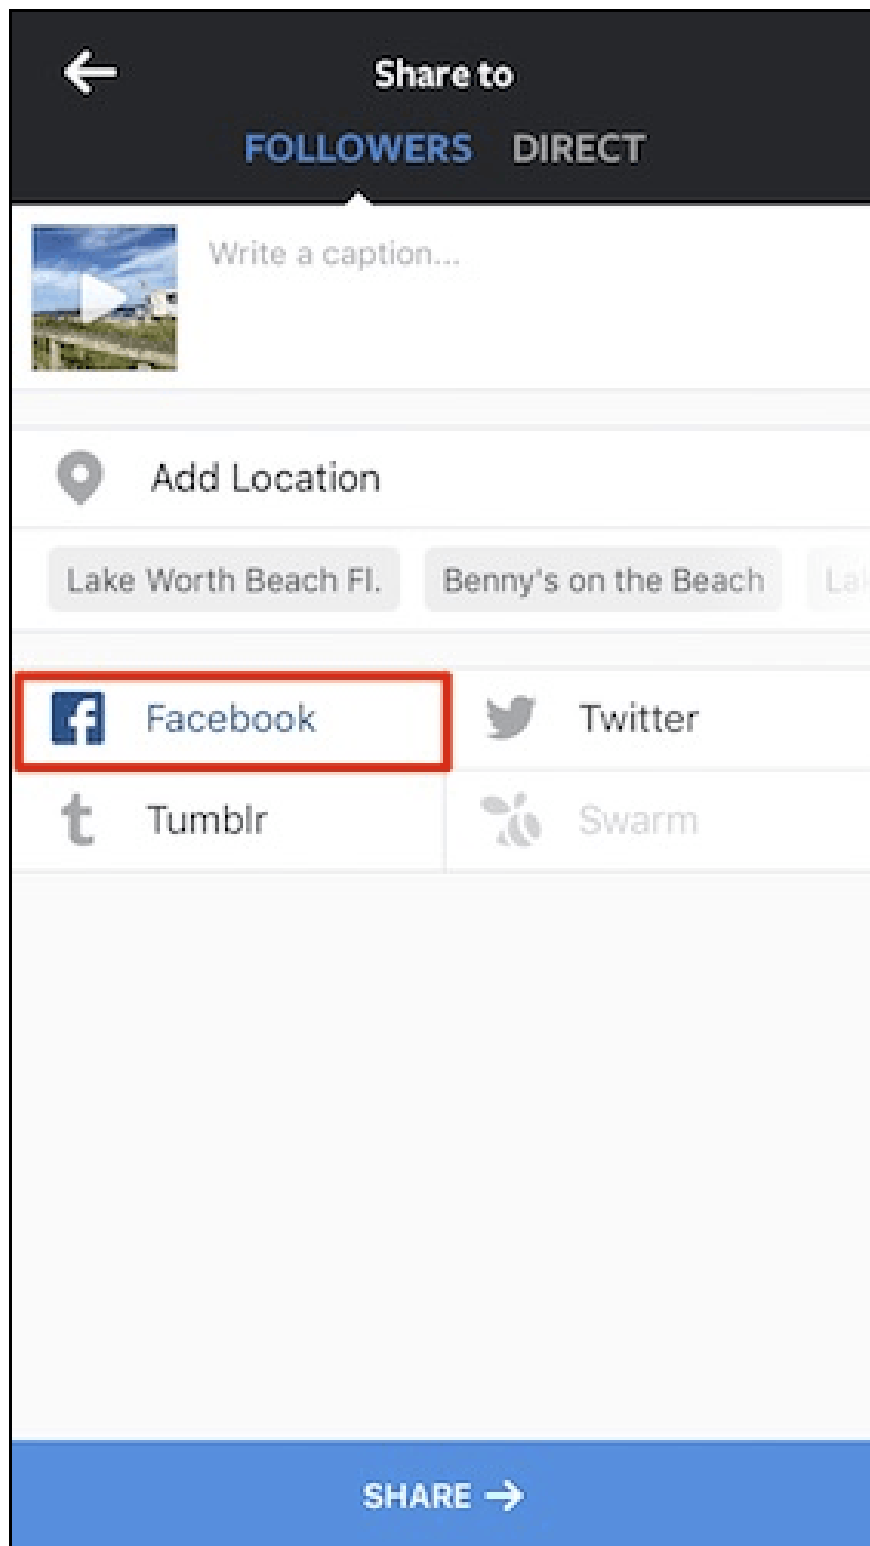

First convert **the MOV file** through the **AirDrop** application. After converting, open your **Instagram** and select the video file you want to share.

After selecting the video file, you can use **Filters** to edit the video. The editing steps are the same as you edit a normal video.

In addition, you can share videos from **Instagram** to **Facebook** if you don't want to convert **MOV files** to **animated GIFs** .

Good luck!
