

# Instructions for sharing Wi-Fi passwords from your iPhone to another iOS 11 device

Please refer to the instructions for sharing Wi-Fi passwords from your iPhone to another iOS 11 device in this article!

1. Play WiFi on super simple computers with MyPubicWiFi
2. Free WiFi access with Android ZiPi application
3. Instructions to play WiFi by Laptop with Wi-Host software

When you don't know **the Wi-Fi network password** at a friend's or coffee shop's home, you must request to save the data on your iPhone device. If the owner of a Wi-Fi hotspot can remember the password, it is fortunate, please access it in the usual way. If they don't remember, you need to use mobile data. Fortunately, the entire process has become easier with **Apple's iOS 11 update** .

Apple's new feature is called " **Share Your Wi-Fi - Your Wi-Fi Share** " and it does exactly that. If you want to connect to a friend's Wi-Fi network but no one there can remember the password, some simple clicks on someone's connected device can immediately fill the screen. " **Enter Password - Enter password** "on your device and help connect now - no one has to remember or type a password.

Does this sound easy and interesting? No need to write and type long, complicated passwords. No more worrying about someone forgetting to access your Wi-Fi network password. No more stupid QR PINs to solve. No more worrying about connection. All that is needed is **iOS 11** or **MacOS High Sierra** .

**Instructions for sharing Wi-Fi passwords from your iPhone to another iOS 11 device:**

## **Request**

To operate, iOS 11 or MacOS High Sierra is essential on both devices and ensure that both devices **turn on Wi-Fi and Bluetooth** . If a device doesn't have iOS 11 or MacOS High Sierra, it won't work.

As long as these requirements are met, it will work whether you use an iPad, iPhone, iPod touch or Mac computer. In the case below, we use two iPhone phones as examples.

### **Step 1: Select Wi-Fi network**

On iPhone phones need to access the Internet, open Wi-Fi settings and select the network you want to connect.

**Note** : You need to select the exact network to which the other iPhone is connected. After selecting it, the "**Enter Password**" screen will appear.

You can also access this Wi-Fi network by bringing your iPhone near any iPhone, iPad, or Mac which has connected to this network and has you in their contacts.

## Step 2: Open the connected device

Now, iPhone has been connected to Wi-Fi network needs to be unlocked to operate. If it's your iPhone, just enter the confirmation code, use the Touch ID or Face ID to unlock it. If the iPhone is owned by others, politely ask them to do this.

### **Step 3: Move the device closer to each other**

If nothing happens on the iPhone device, move the two devices closer together. They need to stay close to each other so that the iPhone does not connect to send a request to the connected iPhone device.

### **Step 4: Send password**

If all goes according to plan, the hint below will appear on the connected iPhone requesting its Wi-Fi sharing. It will look like this:

**Do you want to share the Wi-Fi password for '[Network Name]' with [Contact or Device's Name]?**

Do you want to share the Wi-Fi password for '[Network Name]' with [Contact or Device's Name]?

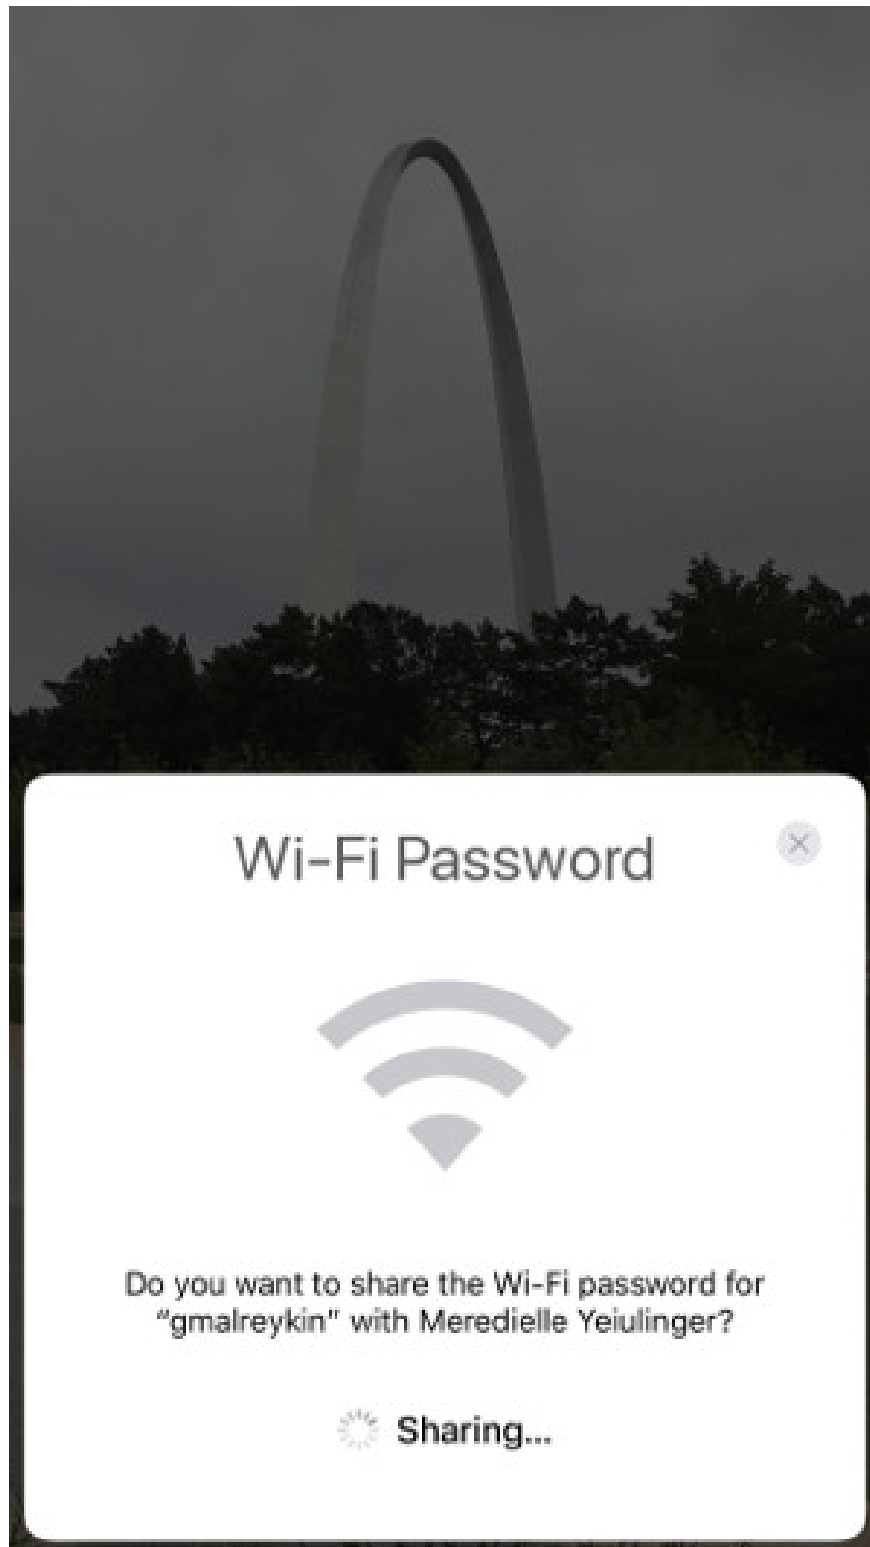

Simply press or click the "**Share Password**" button to send it via an unconnected iPhone.

## Wi-Fi Password

Do you want to share the Wi-Fi password for  
"gmalreykin" with Meredienne Yeulinger?

Share Password

The password field on the unconnected iPhone will be automatically loaded after a short period of time and the device will immediately be connected to the network. All you need to do is press " **Done** " on the reminder still on the connected device.

# Complete

Successfully shared your Wi-Fi password.

You can also access this Wi-Fi network by bringing your iPhone near any iPhone, iPad, or Mac which has connected to this network and has you in their contacts.

And that's all you need to do. Of course, you **should not share a Wi-Fi password with someone you don't trust** and should refuse permission. Although they will not see the Wi-Fi password on their device but if it is stored in Keychain, they can view it on the Mac after synchronization. In addition, this will likely **not work at some business hotspots using a RADIUS server** for authentication.
