

Instructions for splitting photos using Canva are very simple

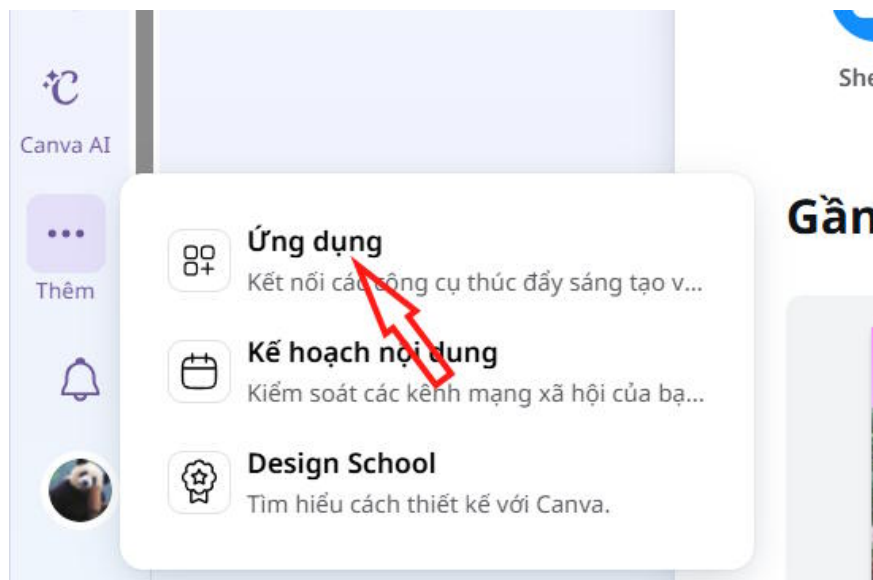

Canva has tools to split photos to post on social networks, creating special effects to attract more viewers.

Canva has a tool for us to split photos posted on social networks, creating special effects to attract more viewers. Photos are automatically divided according to the number of columns and lines that the user chooses to cut. Finally, you just need to upload the split photo with Canva to the collage page to create the effect of combining many small photos into 1 photo. Below are instructions for splitting photos with Canva.

How to Split Images Using Canva

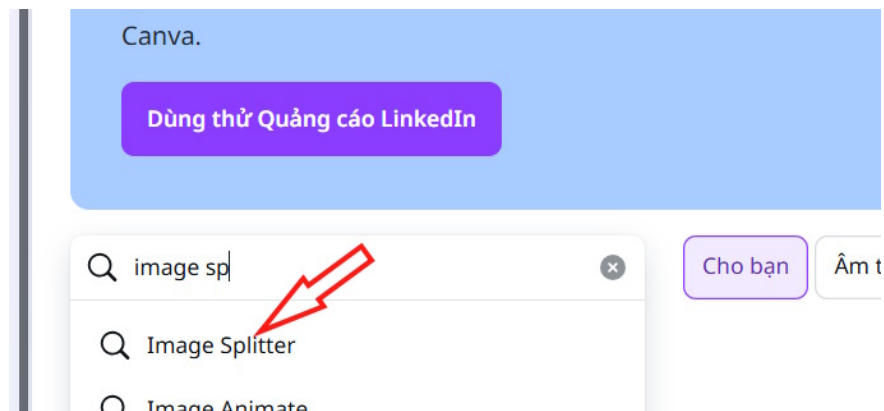

Step 1:

At the interface on Canva, click on **Add and select Application** in the displayed menu.

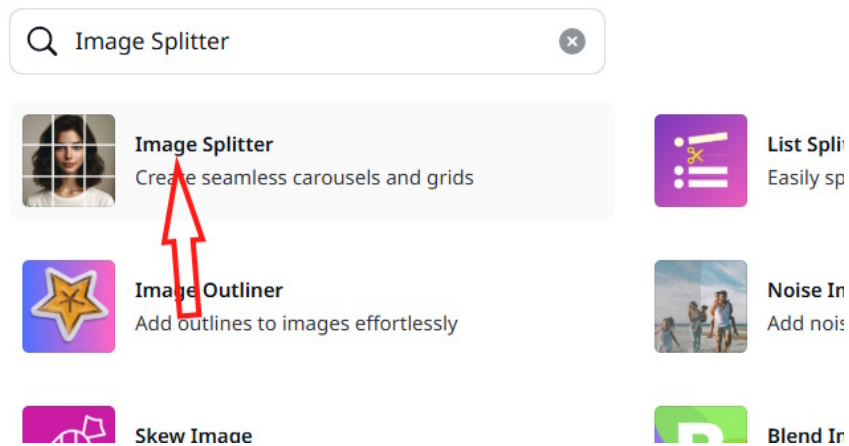

Step 2:

Go to the application search interface, **enter the keyword Image Splitter** and then click on the search result below.

Then we will see **the photo splitting application on Cava** as shown, click to use.

Step 3:

Next, you'll be asked whether you want to use Canva's image splitter tool for an existing design or create a new design.

Image Splitter

Step 4:

In the new interface, **click Choose file** to upload the photo you want to split.

In the interface using the image splitting tool, **select the number of rows and columns as 2** and then **click Split image** below.
