

Instructions for taking photos with dinosaurs thanks to AR technology on smartphones

TipsMake - Do you want to witness the 'giant' size of dinosaurs, or even take photos with animals that have gone extinct tens of millions of years ago? Google can help.

Google has just added to its search engine a visual display of dinosaurs' images with augmented reality (AR) technology when users search for crisis-related keywords. long.

Google allows dinosaurs to come to life with AR technology

Currently, Google supports AR technology when looking for 10 different dinosaurs, which are popular and well-known dinosaurs. It is expected that Google will continue to add new dinosaurs in the near future.

When users search for keywords related to 10 dinosaurs that Google supports, at the search results, in addition to providing information and search results about that dinosaur, Google also allows users to use AR technology to display dinosaurs in vivid 3D, with lifelike movements and roars. Users can display pictures of dinosaurs searching in real environment and can even take pictures with these dinosaurs.

Google said users can display dinosaurs in real size if the surroundings are large enough or can be customized to shrink the dinosaurs to fit in the surroundings.

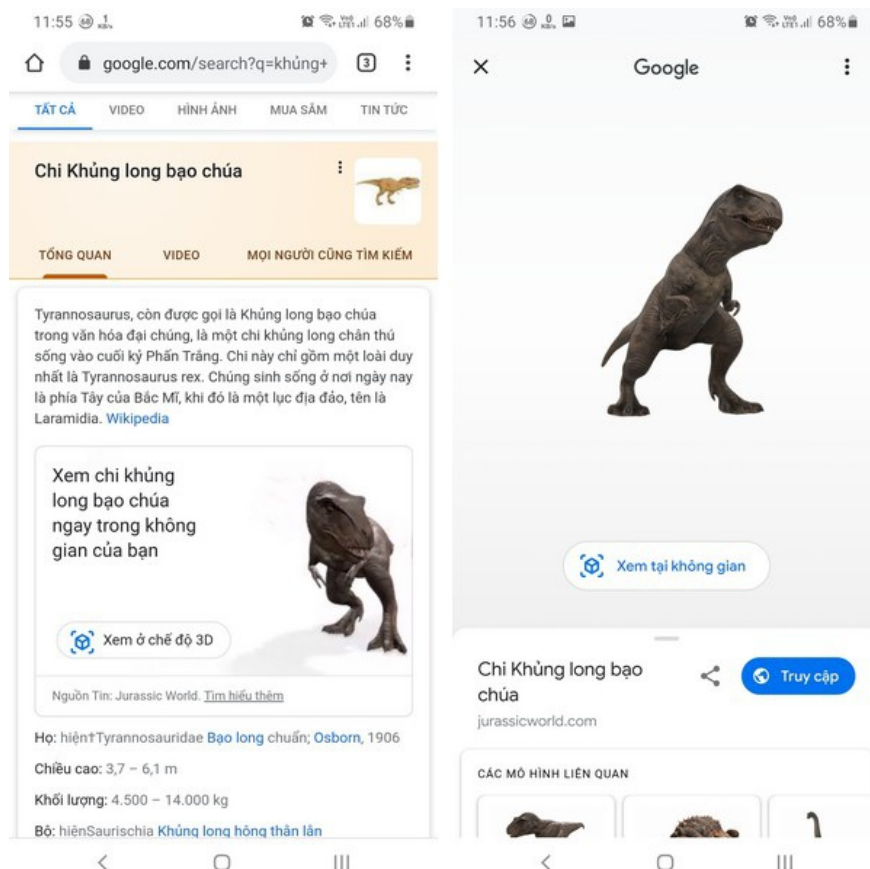

Instructions for taking photos with dinosaurs thanks to AR technology on smartphones

To be able to use the new search feature on Google, users' smartphones and tablets need ARCore support to run AR apps (for Android devices), or must use iPhones with iOS 11 and above platform.

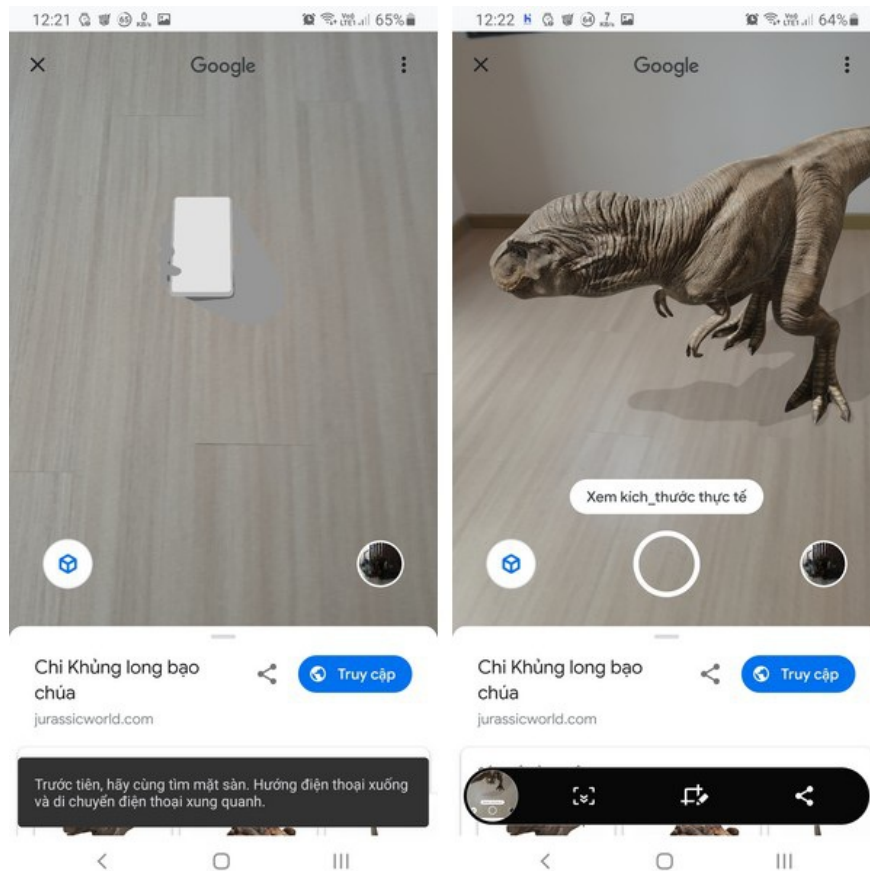

If you are using Android, you can go **here** to check if your device supports ARCore. Currently most smartphones running Android new generation are supported this feature.

If your smartphone is on the ARCore supported list, all you need to do is activate your web browser to access Google, then search for dinosaur-related keywords, for example, 'dinosaurs. despot'.

At the search results that appear, next to the information and web pages containing the search keyword, you will see the option to 'View in 3D'. After clicking on this option, a 3D model of the dinosaur you have been looking for will be displayed, allowing you to use your finger to rotate and change the view.

In this interface, click on the 'View in space' option, then point the camera towards the floor or a flat surface, immediately a 3D dinosaur model will be displayed in the middle of the space you choose. . You can use your finger to resize the dinosaur to fit the scene and can press the shutter button to capture the image of dinosaurs appearing.

You can click the shutter button to take a picture of the 3D dinosaur appearing, or hold the capture key to record a video.
