

Instructions for using Capcut on the latest computer

Capcut has released an English version of Capcut for users to use, instead of the previous Chinese version, or you have to use an emulator to install Capcut on your computer.

Capcut has released an English version of Capcut for users to use, instead of the previous Chinese version, and you do not need to use an emulator to install Capcut on your computer. Capcut on the computer provides you with professional video editing tools, from basic to advanced to get the video you want. The following article will guide you to use Capcut on your computer.

Instructions for using Capcut on the computer

Step 1:

First of all, we click on the link below to download the Capcut version for the computer.

Step 2:

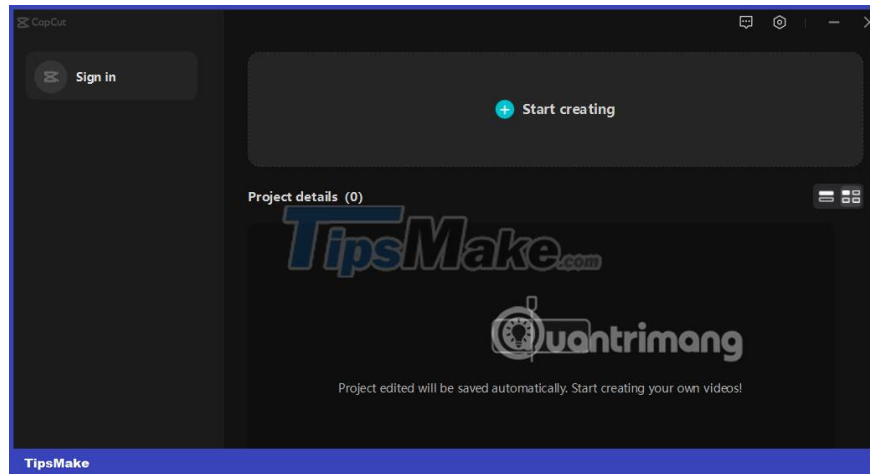

Then the user proceeds with the installation as usual. You can click More to change the software installation directory again. Finally **click Install Now** to proceed with the installation of CapCut software.

Step 3:

After installing the software, **click Start now** to use the software.

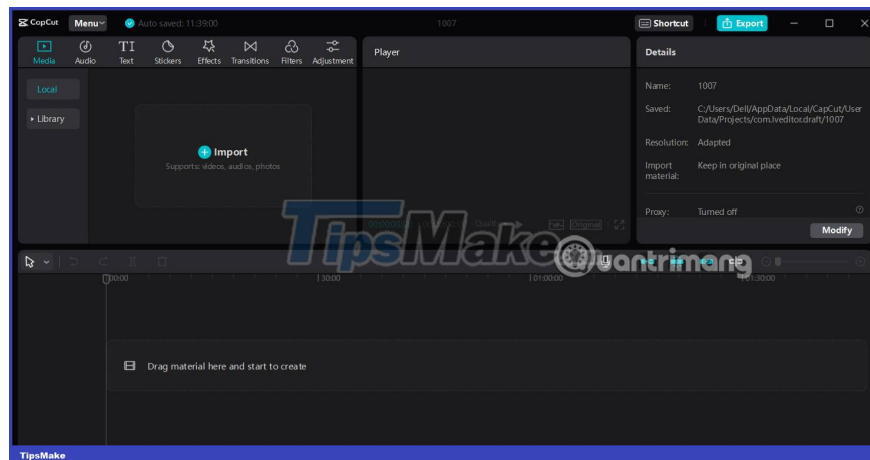

This is the first interface of CapCut on English computers. You can click Sign in to log into your CapCut account. Or you can **click Start creating** to edit.

Step 4:

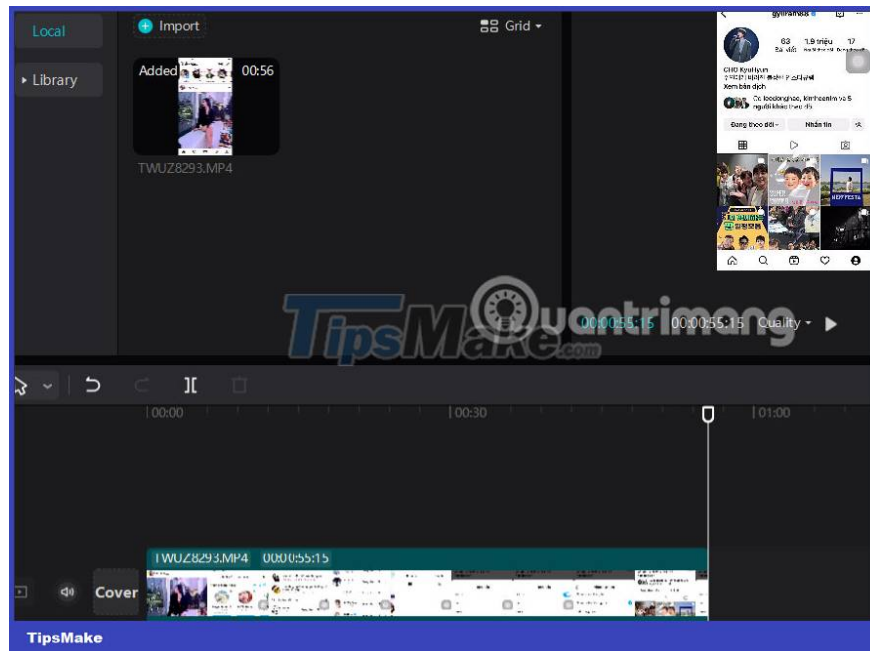

This is **the video editing interface on computer Capcut** . The top left corner is the video editing tools. Below is the adjustable Timeline bar. The Detail section is the location to save the video as well as other information.

To start editing, **click the Import button** to import the video into the software.

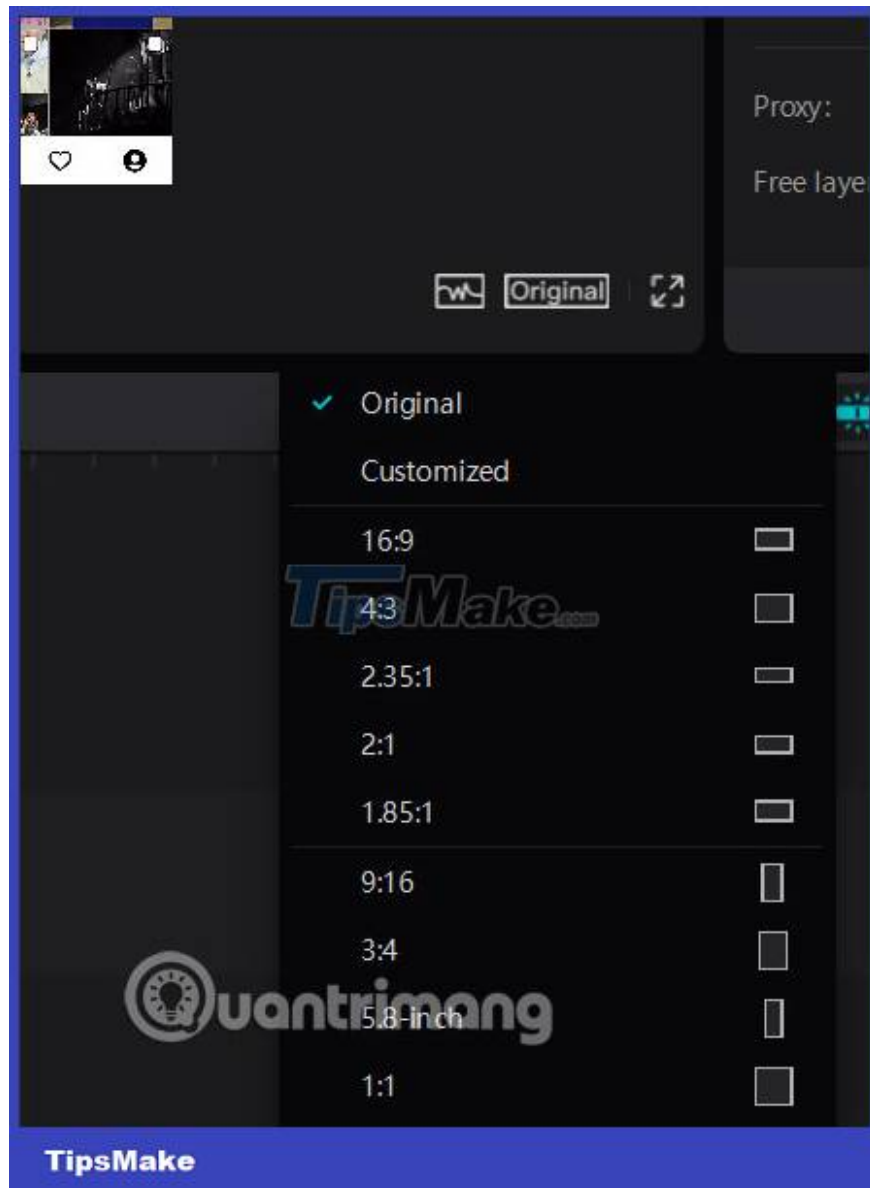

Step 5:

You import the video into CapCut software and then **drag the video down to the Timeline bar** to adjust.

Step 6:

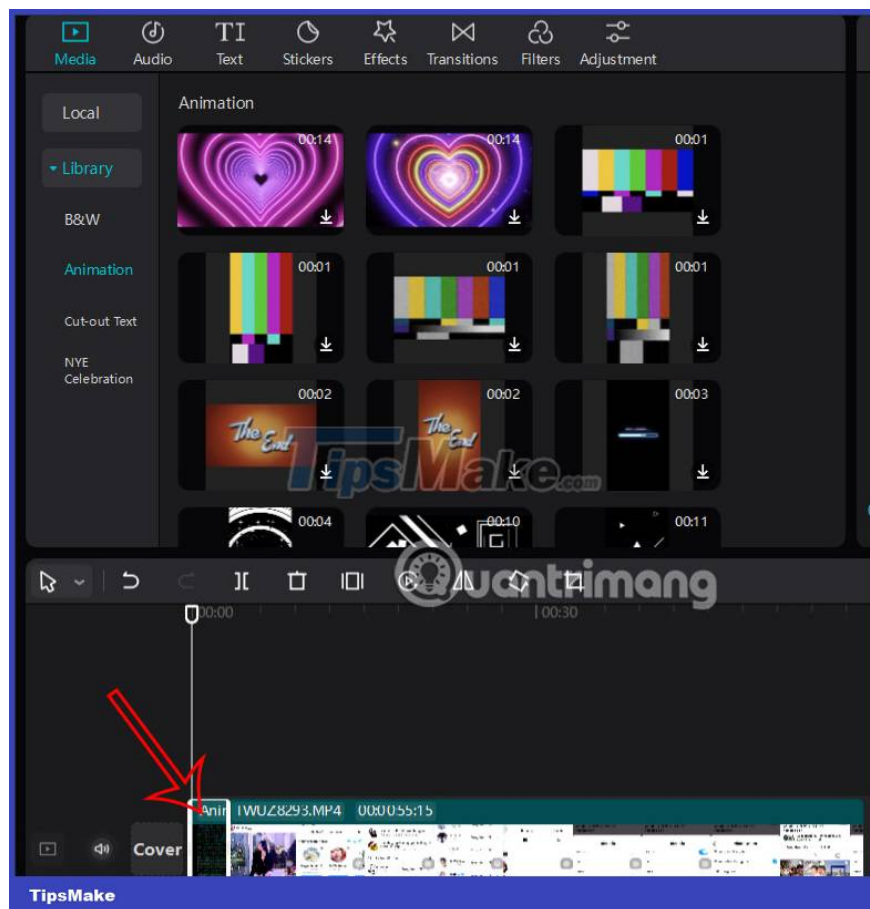

First you can **reframe the video** , click on the word **Original** and then select the frame we want to use for the video.

Step 7:

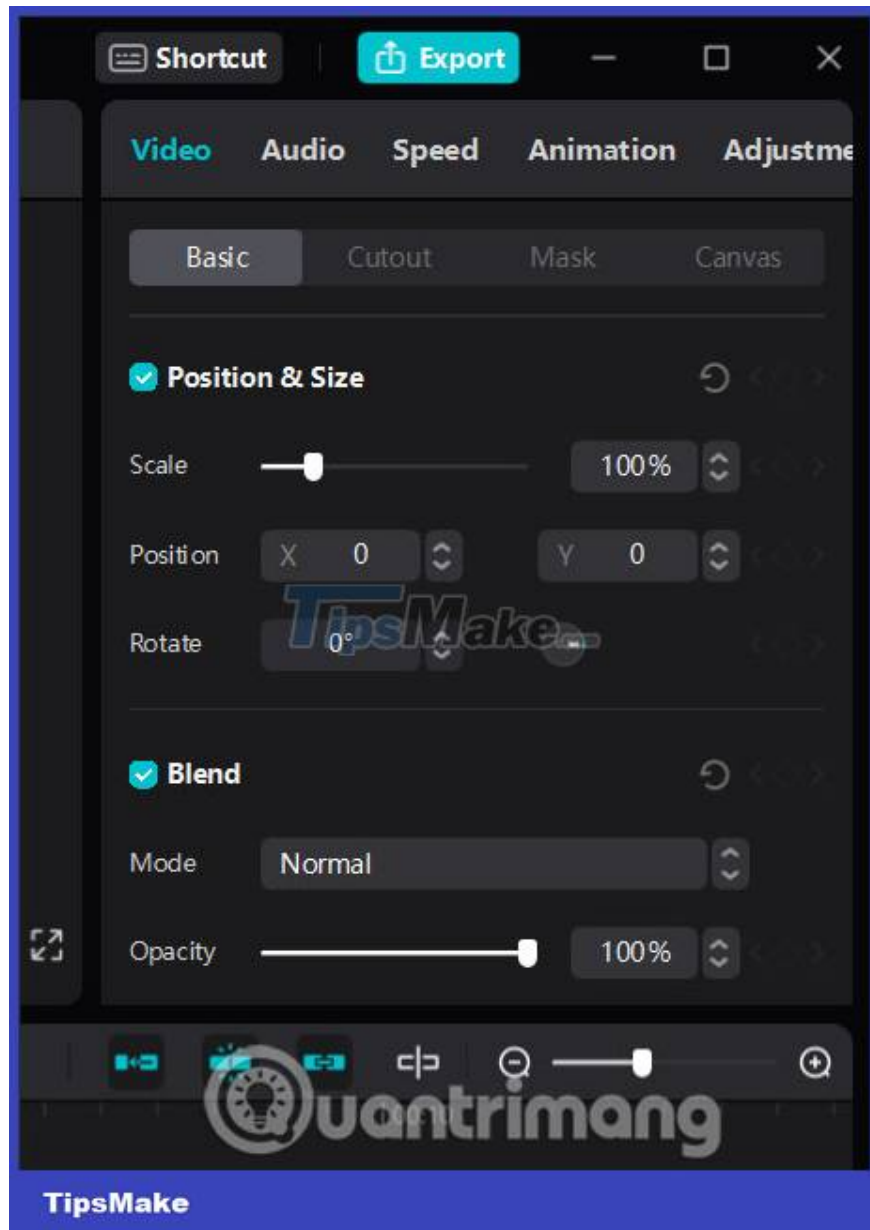

Now you proceed to edit videos on Capcut software. Basically, all editing components are quite similar to the Capcut version on the phone. What content you want to use for the video, scroll down to the Timeline bar below.

For example, if you want to add an intro or an end to the video, click Library, select the video and then drag down the Timeline bar, before the video or after it as you like.

Step 8:

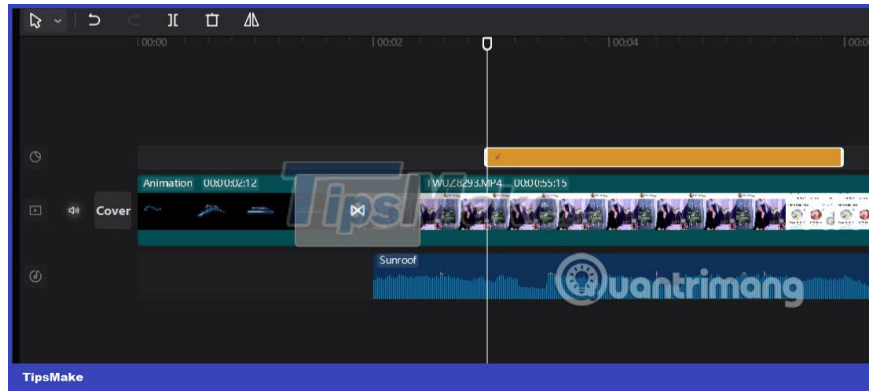

Click on the video and look to the right you will see tools to edit the video as shown below.

Step 9:

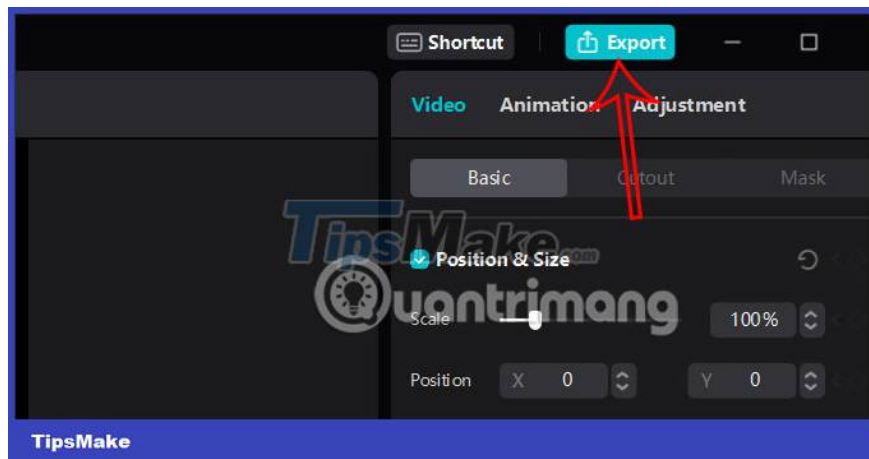

Each element you insert into the video will be displayed in the Timeline so we can change it, display position, adjust the time,. You click on the element to be adjusted to change the position, edit the time. .

Above will be a preview video so we can adjust it before exporting the video on Capcut.

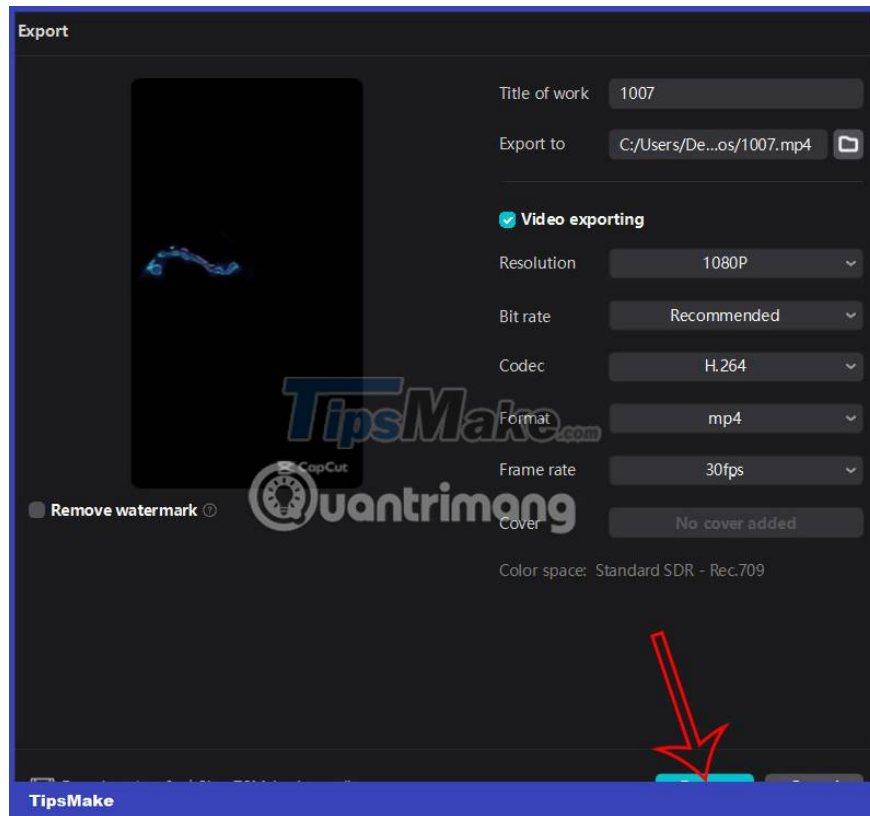

Step 10:

After you have finished editing the video on Capcut, **click Export** in the top right corner of the screen to export the video.

Now you can enter a name for the video, adjust the video quality, save the video location and then click Export below to proceed with exporting the video.
