

# Instructions on using Copilot Vision to analyze screen content.

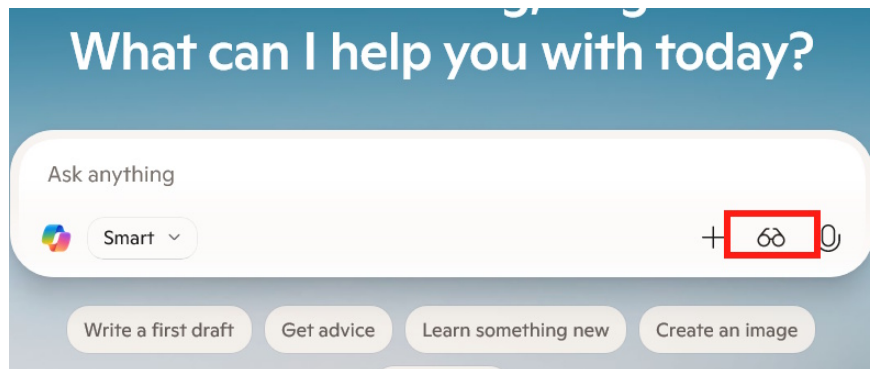

Copilot Vision, a tool within Copilot, analyzes and answers questions about what you're viewing on your computer screen or via your mobile phone camera.

The Copilot Vision tool in Copilot analyzes and answers questions about what you're viewing on your computer screen or via your mobile phone camera. You can select any content displayed on the screen and then activate Copilot Vision to read the displayed content and return the results to you. Below is a guide on how to use Copilot Vision on a computer.

## How to use Copilot Vision on a computer

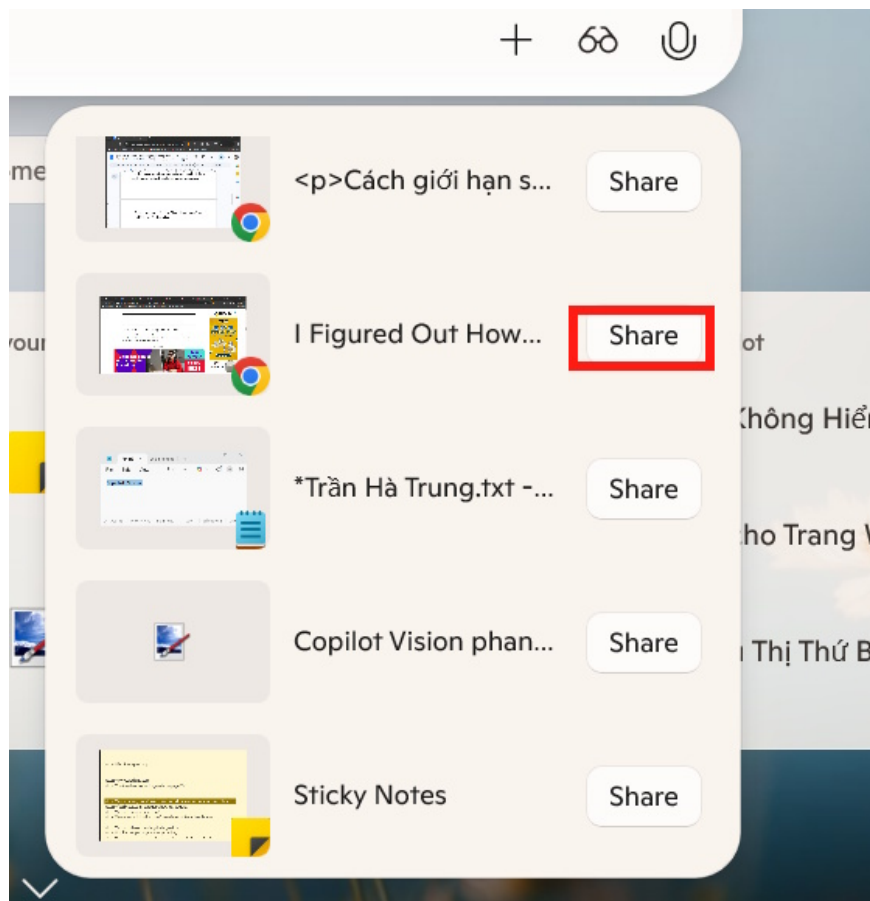

### Step 1:

Open the Copilot application on your computer, then click the glasses icon in the chat window to activate this feature.

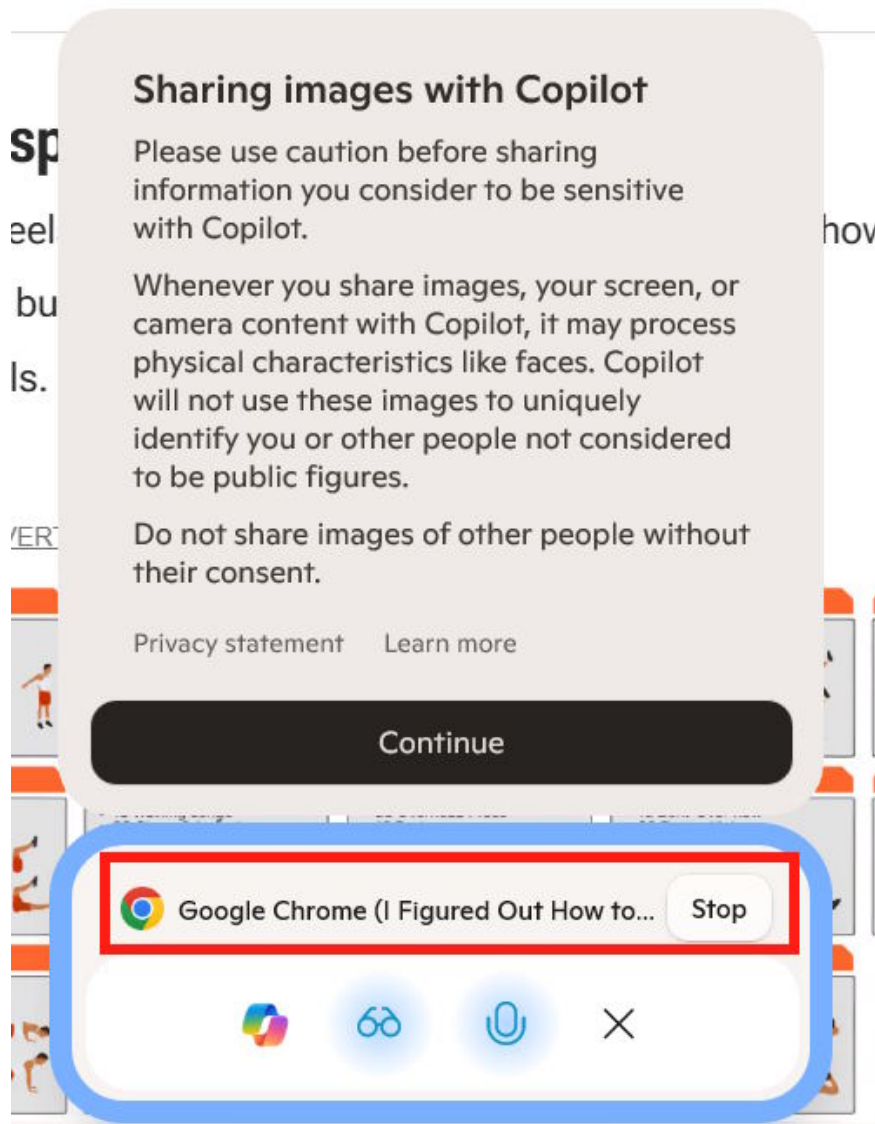

### Step 2:

Then you will see the interface showing the screens currently open on your computer. Select the screen you want to analyze and then select Share to send the screenshot to Copilot Vision.

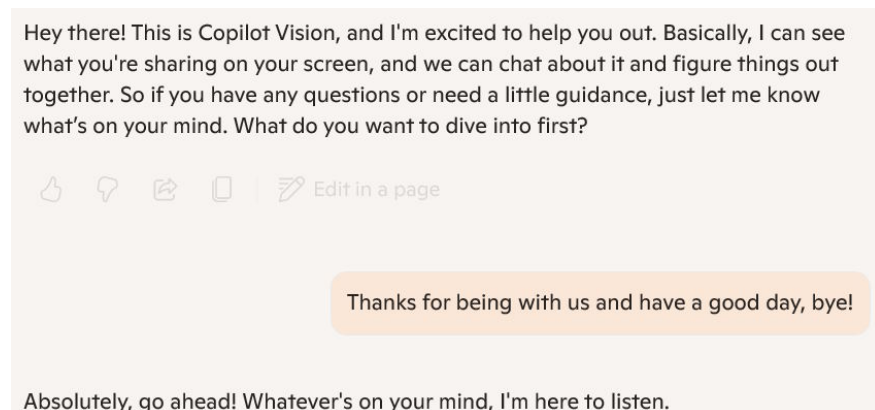

Immediately, you'll see **the Copilot Vision tool** appear to analyze the screen content with you via **voice in English** . You can ask the AI any questions related to the content displayed on the screen, and Copilot will respond instantly.

To stop chatting with Copilot Vision, press the Stop button to stop sharing the selected screen.

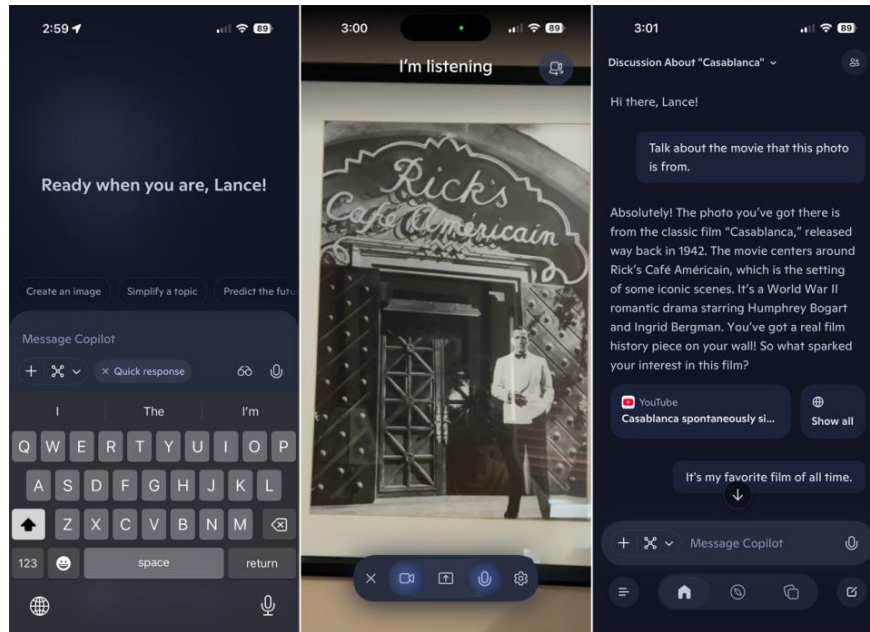

### Step 3:

All your conversations with Copilot Vision are recorded in Copilot so we can review the content.

With the Copilot app on your phone, you tap the glasses icon and then use the camera to take a picture of the object you want to explore. Copilot will then interact with you, allowing you to ask any questions about the

object in the camera's frame.
