

Instructions for using email manager Nylas N1

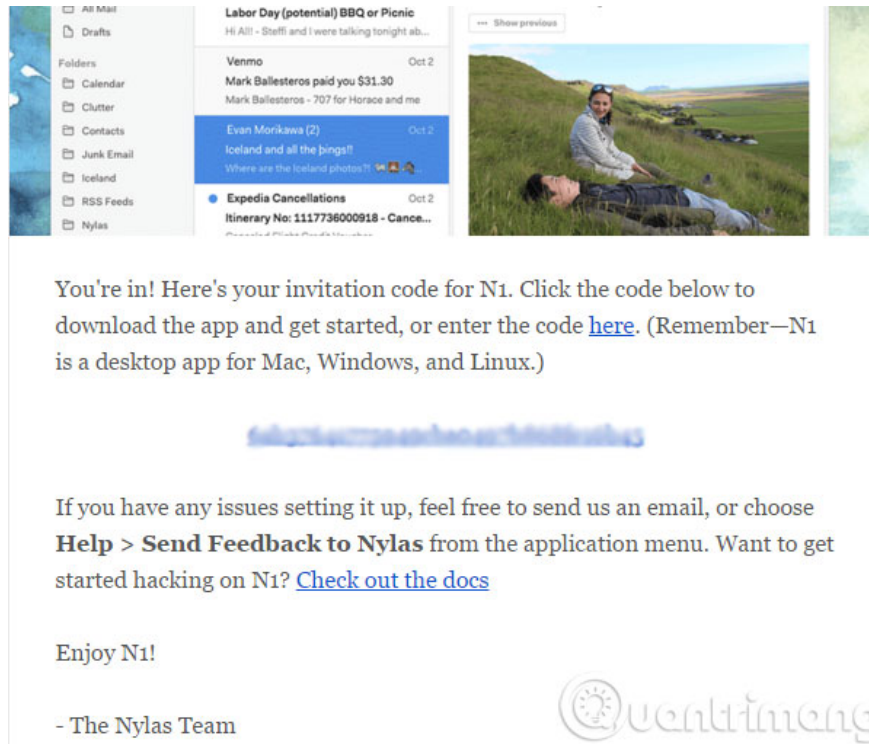

Currently, almost everyone owns several different email addresses and as such, when checking email, they will have to open different email services and then log in each account will take a lot of time. Therefore, the right solution here is to use the email manager on your computer, you only need to log in your email accounts, then every time you need to use, you only have to open the application to be accomplished.

Currently, almost everyone owns several different email addresses and as such, when checking email, they will have to open different email services and then log in each account will take a lot of time. Therefore, the right solution here is to use the email manager on your computer, you only need to log in your email accounts, then every time you need to use, you only have to open the application to be accomplished.

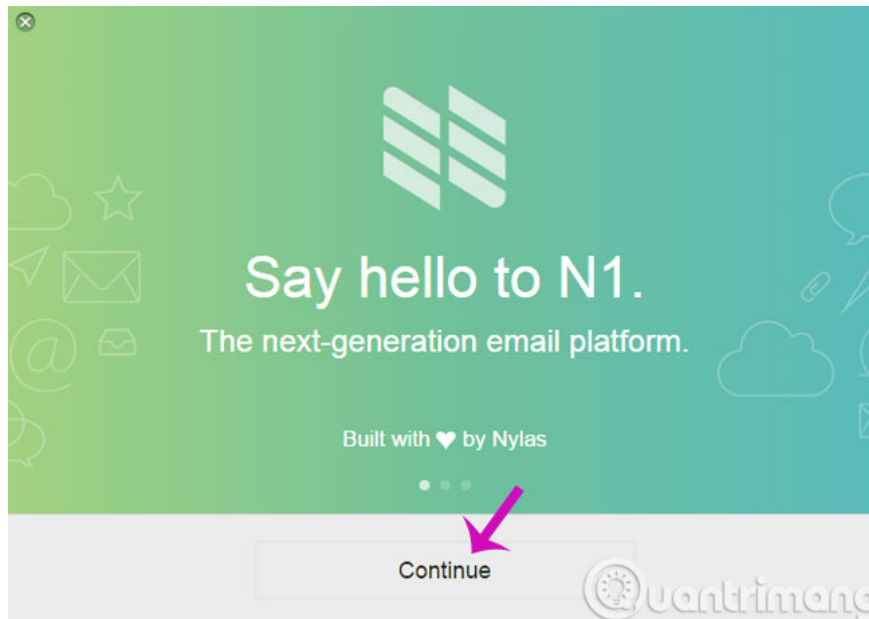

There are many different email managers but today, TipsMake.com will introduce you to a new browser called N1's N1. Since N1 is in the development phase, in order to download and use, you need to register. To register to wait in line, please visit **this address** and enter your email.

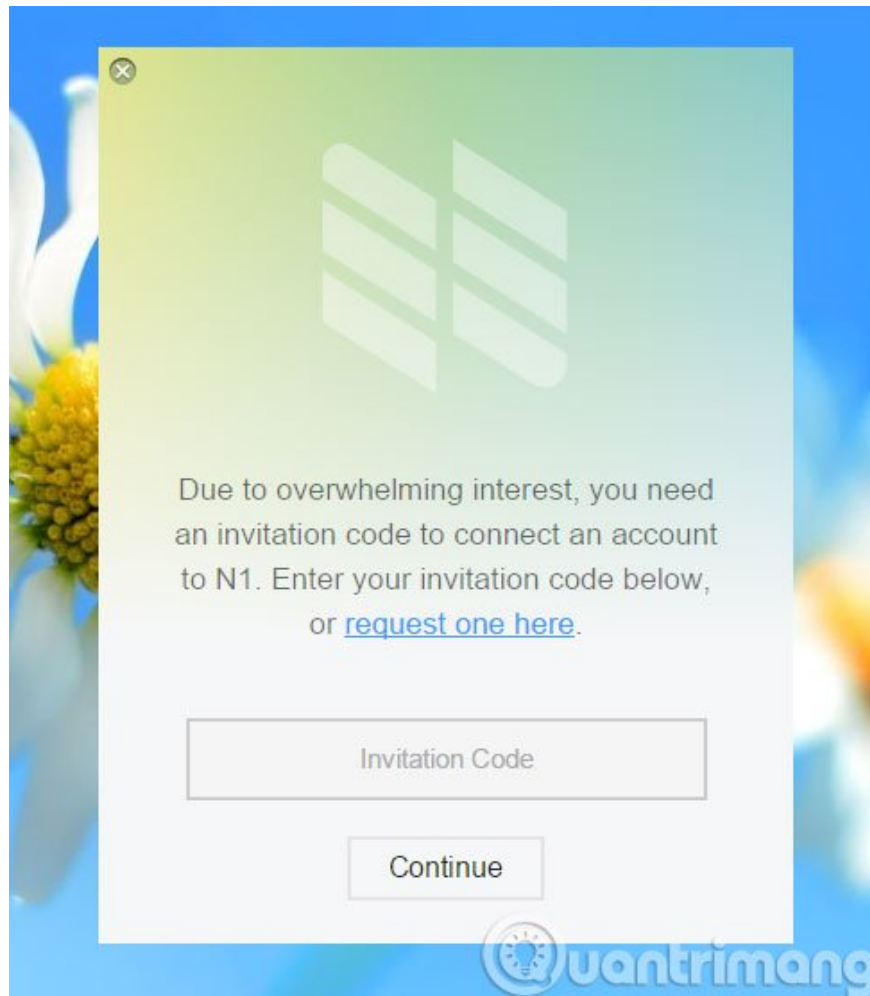

Once approved, you will receive an email with the link to download the installation of N1 with the registration code.

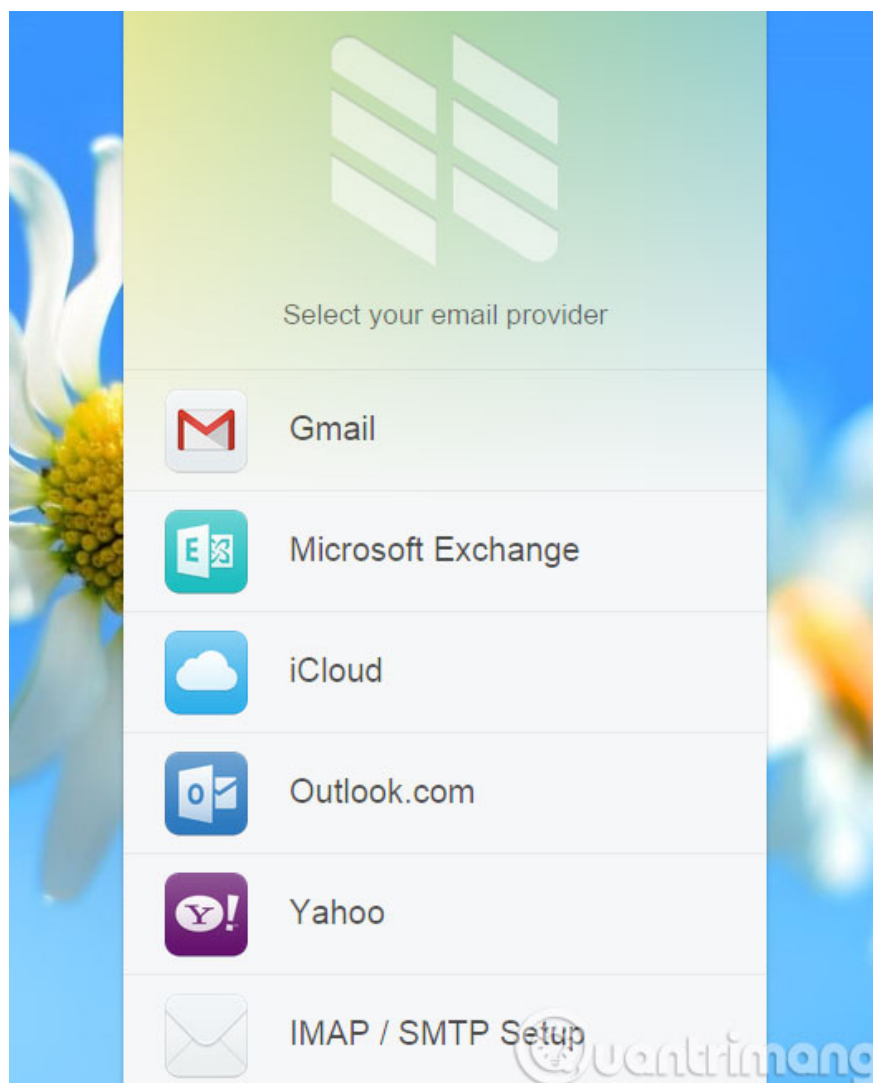

After downloading, launch the installation file of N1 and browse through the software brief information.

Go to the registration code interface, enter the code you received in the confirmation email from Nylas.

Next, choose the email service that you have an account on. Here you will be provided by N1 to support a number of popular email services such as **Gmail** , **Microsoft Exchange** , **iCloud** , **Outlook** and **Yahoo** . If your email account is not on this list, select **IMAP / SMTP Setup** to set it manually.

Here, we will take an example with Gmail to link to the account. The browser window will open, asking you to login and approve for Nylas Mail N1 to be allowed to link and exploit information from your Gmail account.

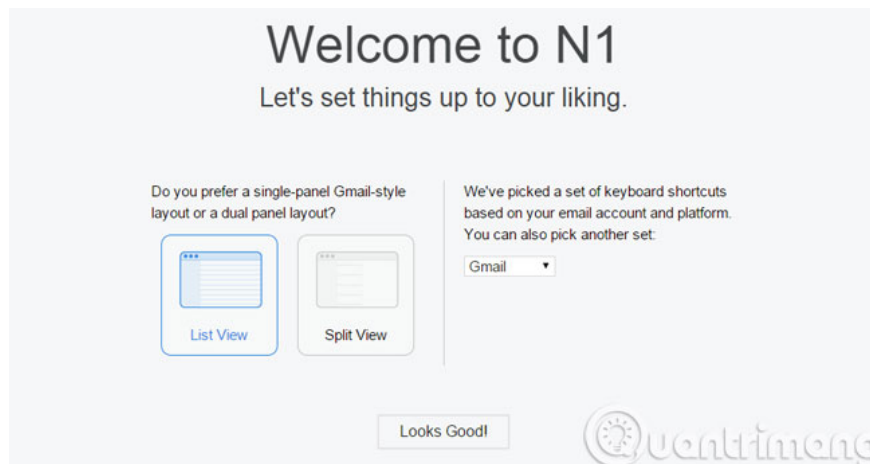

▾ Nylas Mail would like to:

-  View and manage your mail 
-  View your email address 
-  View your basic profile info 
-  Manage your calendars 
-  Manage your contacts 

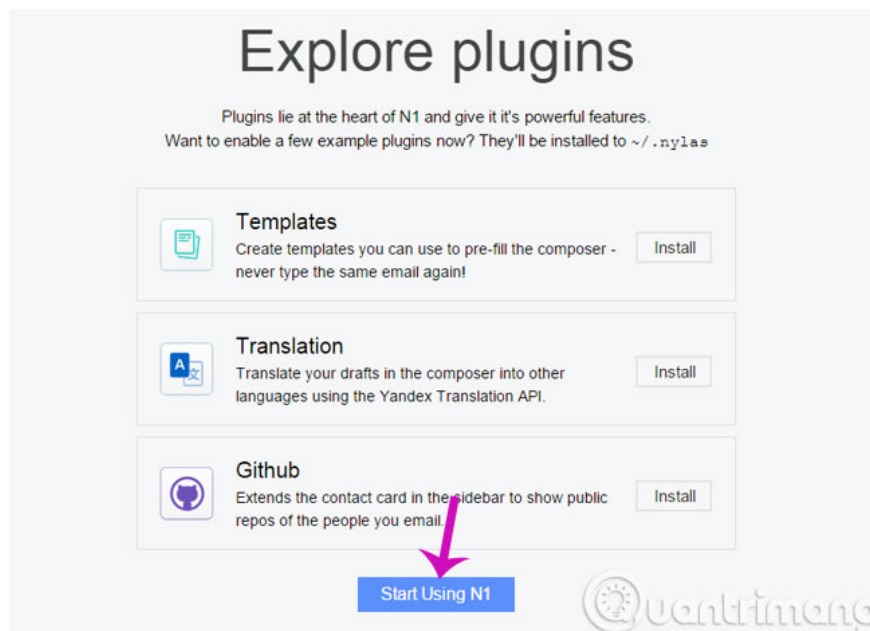

By clicking Allow, you allow this app and Google to use your information in accordance with their respective terms of service and privacy policies. You can change this and other [Account Permissions](#) at any time.

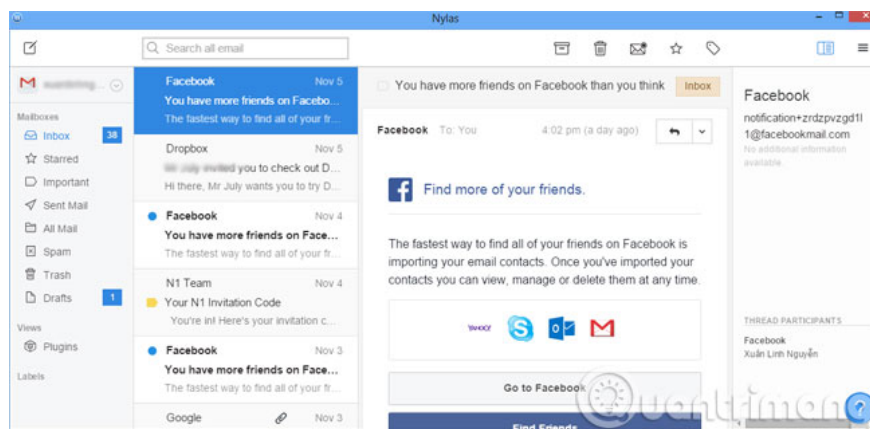

Once you have completed the process of connecting to the email service account, you will be moved to the interface options working in N1. Here you will have 2 interface options as you like.

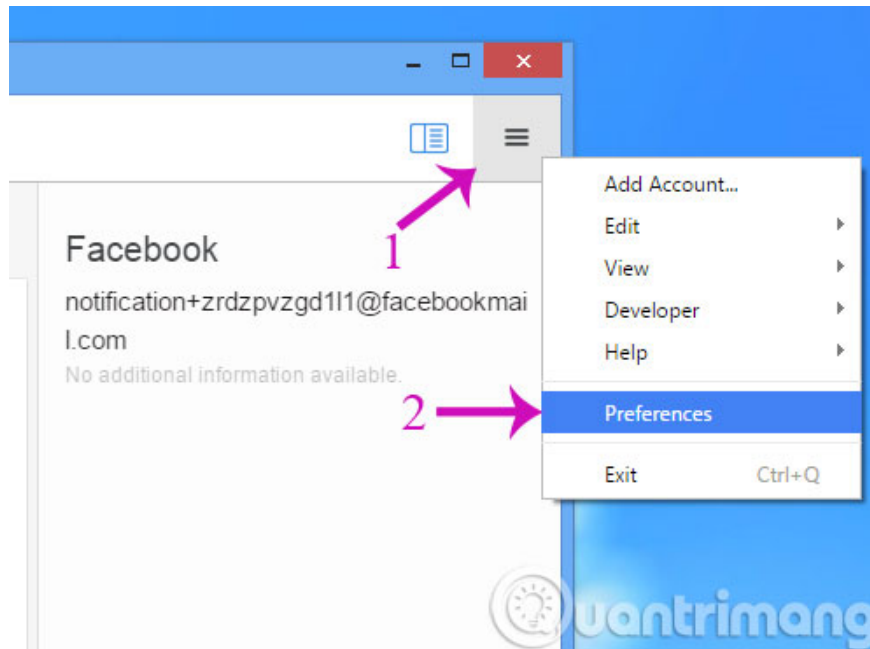

Next are the options to install some supported Plugin, if you are interested, click **Install** to install. Otherwise, press **Start Using N1** to directly access the N1 interface.

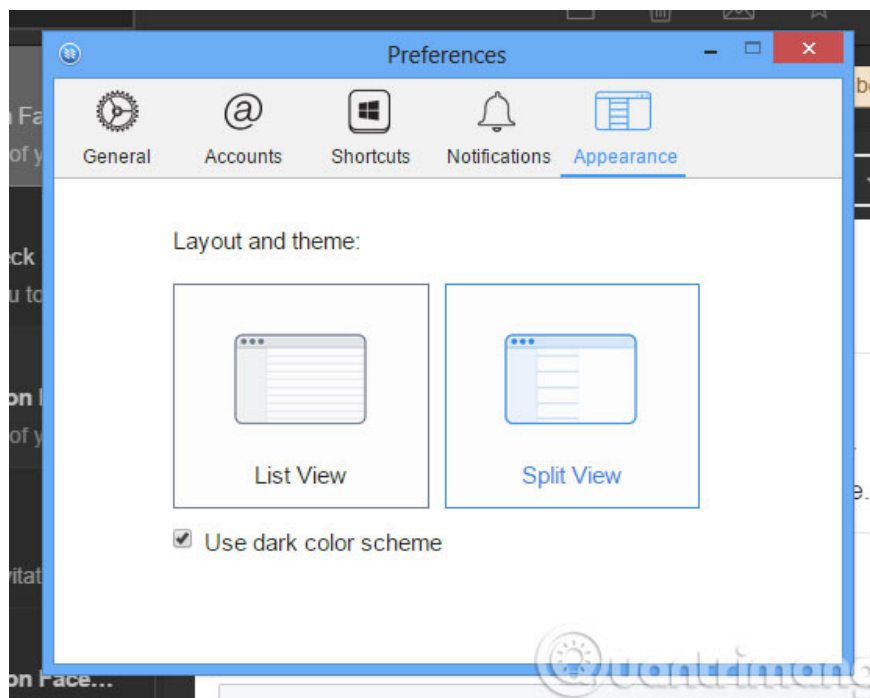

Now the interface of N1 is displayed before your eyes. Looks pretty simple, bright and easy to manage, right?

To change the look of N1, click on the **3 dash** icon on the upper right corner of the N1 interface and select **Preferences**.

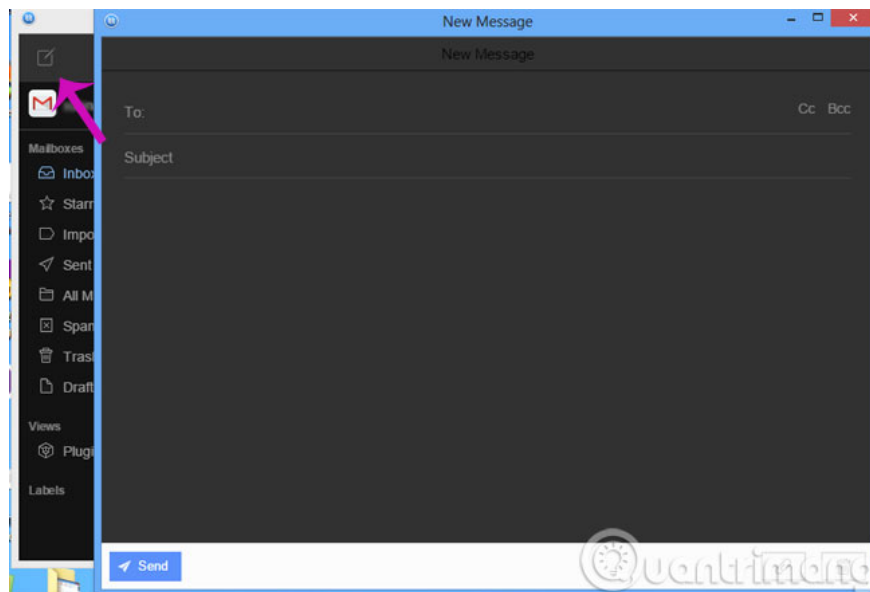

The **Preferences** dialog box appears, click on the **Appearance** tab and click on the display interface you want. There is an option to activate the dark background interface for N1.

In addition to the interface option, Preferences also provides a number of other manipulation options such as adding accounts (**Accounts**), quick **shortcut shortcuts** (**Shortcuts**), notifications (**Notifications**).

When you need to compose an email, click the email compose icon above the account name. The email compose dialog box will appear. It can be seen that the email editor interface of N1 is quite simple and extremely minimalist.
