

Instructions for using Nano Banana to create effective AI images

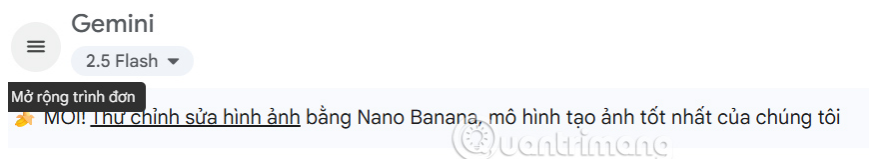

Nano Banana is the latest AI creative tool developed by Google, helping you have artistic or new photos from text or many different images.

Nano Banana is the latest AI creative tool developed by Google, helping you create artistic or unique photos from text or many different images. And now you can use Nano Banana to freely create the image you want through text. Below is a guide to using Nano Banana to create images.

How to use Nano Banana to create and edit AI photos

Step 1:

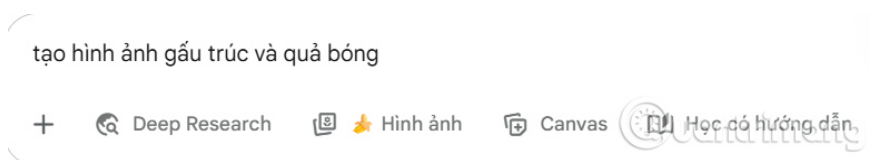

You access Gemini and then you will see a notification to try Nano Banana to edit images, you **click Try photo editing** to use.

Chào ban! Anh

Step 2:

Now you can use Nano Banana to generate images. You can **enter a description to generate** your own AI image.

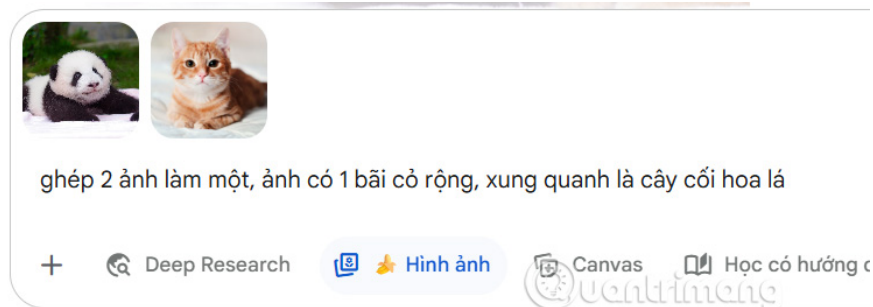

Then you also get the AI image created with Nano Banana on Gemini as shown below. Click the arrow icon to download the image.

Step 3:

Nano Banana also supports you **to merge images into one** with the image creation content you describe the image. You upload the images and then enter the image merging request and send as usual.

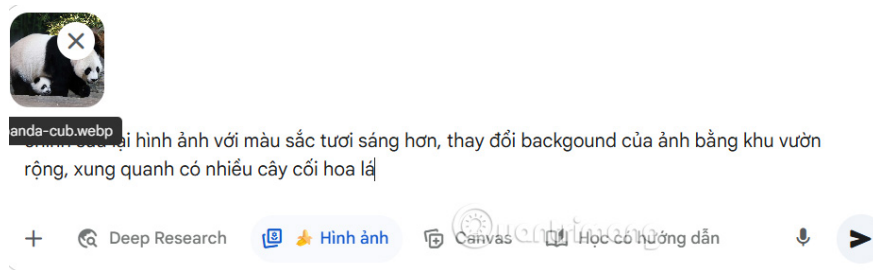

Gemini có thể mắc sai sót, vì vậy, nhớ xác minh câu trả lời của Gemini.

Then you also get a collage like the image below.

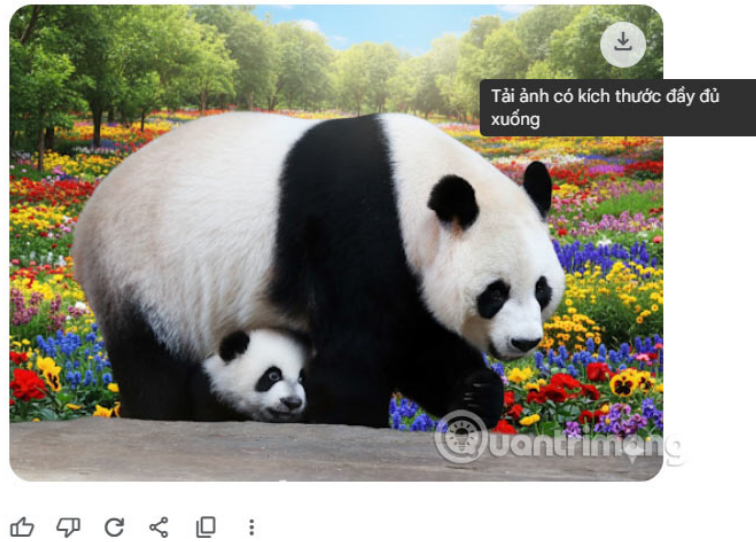

Step 4:

Nano Banana also has **the option to re-edit the image** through the description content that you want to change for the image.

The edited photo will basically change back to your description while keeping the subject intact.
