

# Instructions for using picture-in-picture mode on Android Oreo

In the past two years, Google has introduced users Picture-in-Picture mode in the YouTube application. This is a great feature and it is now available on devices using Android Oreo. Here's how this mode works.

In the past two years, Google has introduced users Picture-in-Picture mode in the YouTube application. This is a great feature and it is now available on devices using Android Oreo. Here's how this mode works.

## Use Picture-in-Picture mode

As you know, Picture-in-Picture mode is one of the most notable features on Android Oreo, allowing users to run multitasking efficiently and perform many tasks at the same time.

In YouTube, when you watch a video and press the back button to find another video, the video being played will be moved to a small corner at the bottom right of the screen. On Android Oreo operating system, this feature is similar. However, instead of having only a small video window limited to a single application, you can use it anywhere in the operating system. It is a new step in Android's split screen layout.

1. Install Android Oreo now
2. How to fix Bluetooth and Wifi connection errors on Android 8.0 Oreo

Suppose you are watching the NF video of Green Lights, but you also need to check Google Feed. You just need to press the Home button. This video will become a minimized window in the bottom right corner of the screen and you can perform tasks other than this application. You can even drag miniaturized tasks to anywhere on the screen and do many things at once.

To expand or close the video, just click it to display the options. The square button in the middle of the small screen will display it in the application (the example in the picture is YouTube), and the headset icon will close the preview mode and play the sound in the background (if you have registered YouTube Red) .

Currently, Picture-in-Picture mode only works in some Google applications: Chrome (all versions), Duo, Play Movies, Maps and YouTube. However, make sure that when Oreo becomes famous, many other applications will have this feature.

### **How to disable Picture-in-Picture mode for specific applications.**

First, drag down the notification bar and click on the gear icon to access the **Settings** menu .

From here, click **Apps & Notifications** , then click **Advanced** to expand this menu.

### Sound

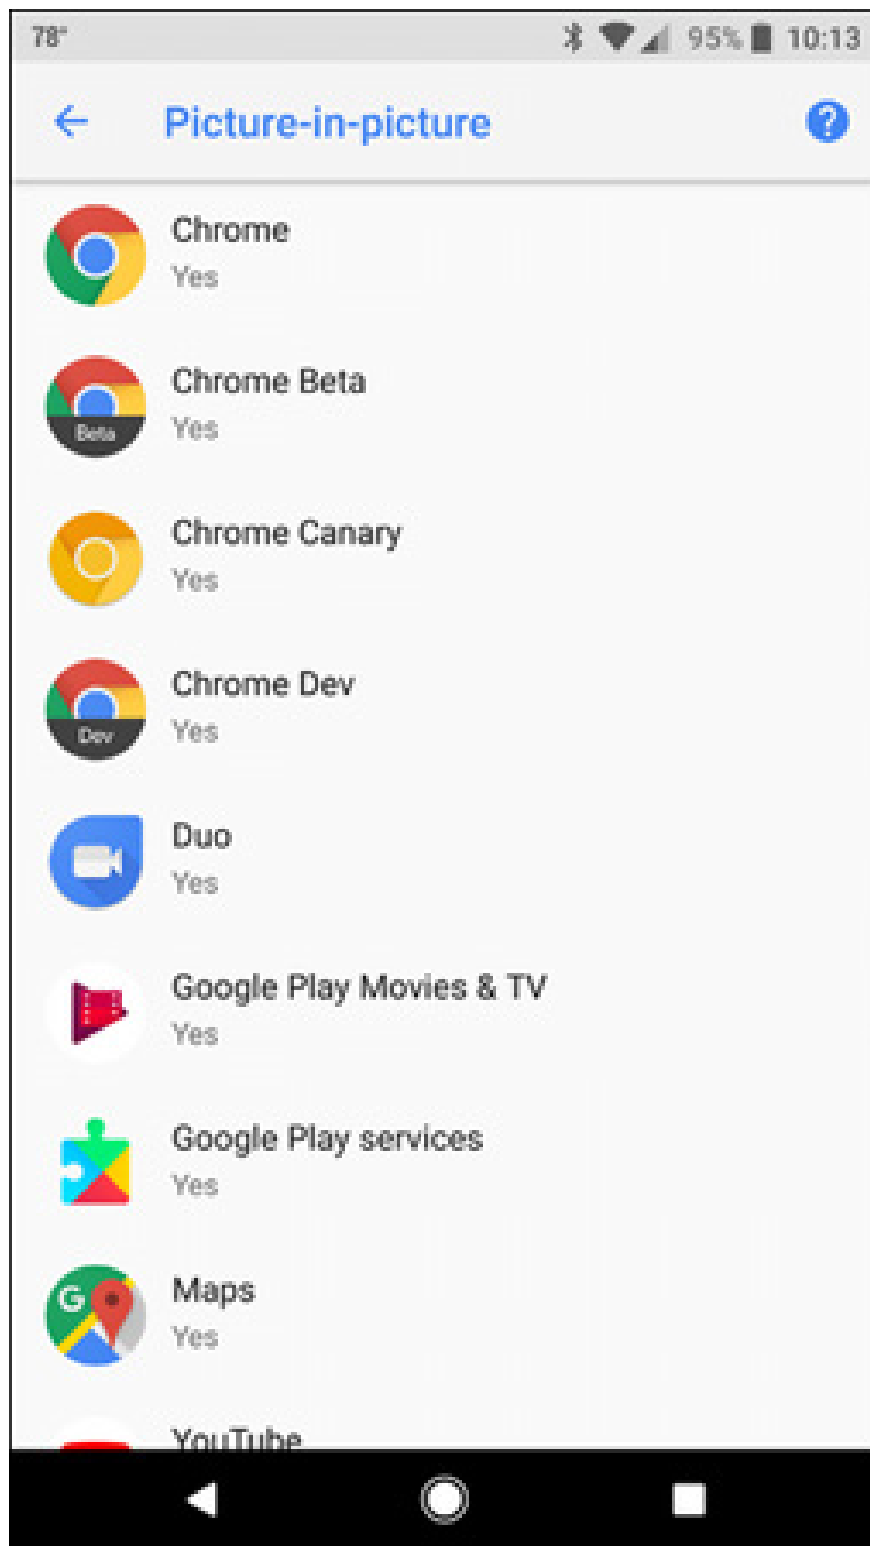

Volume, vibration, Do Not Disturb

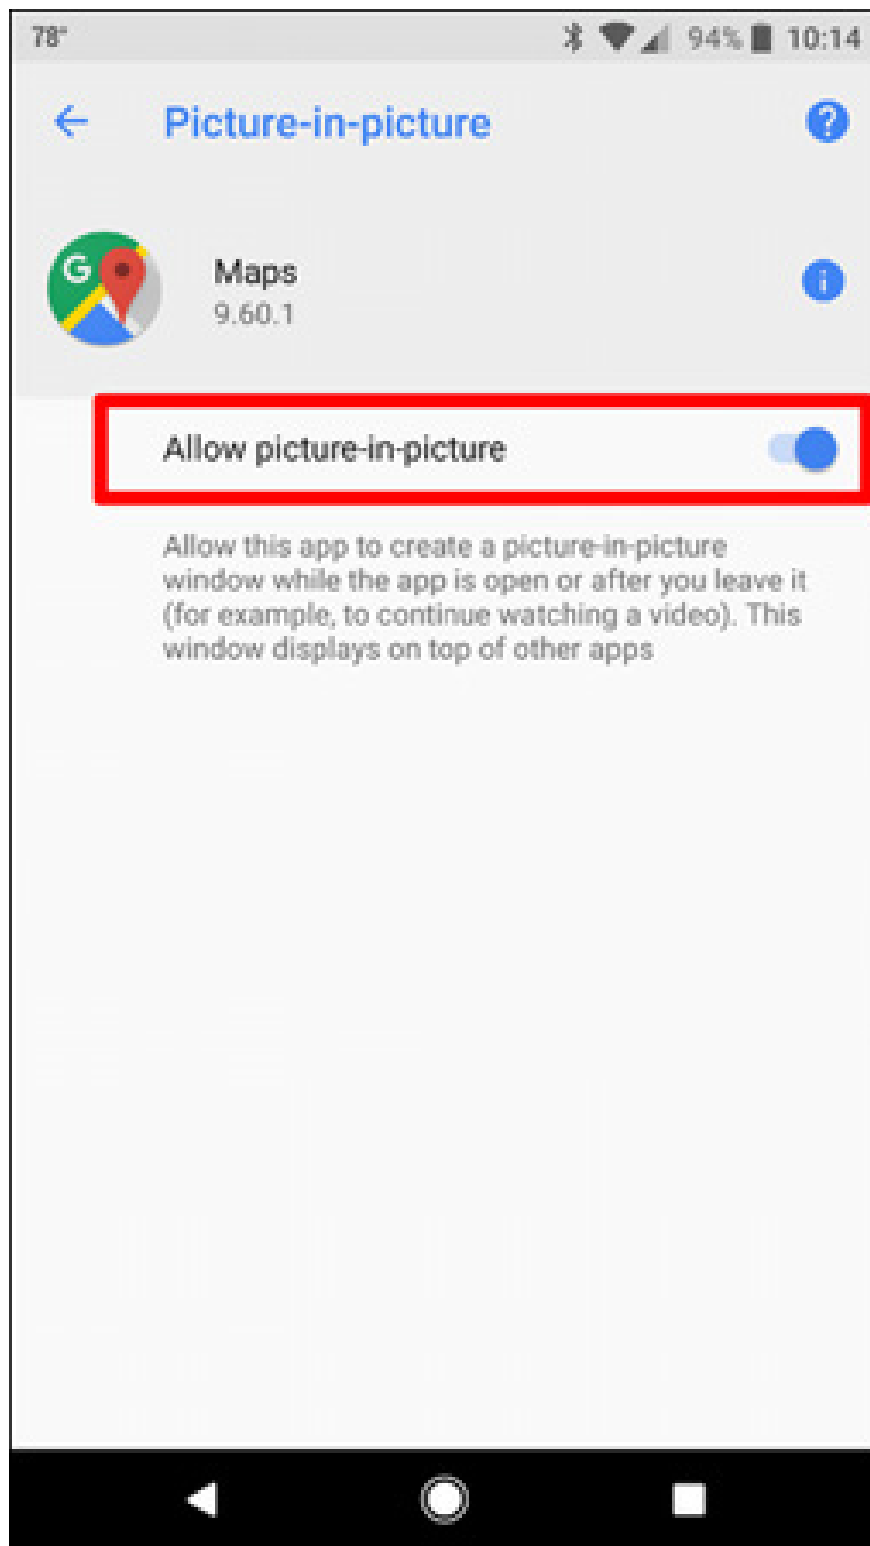

The last option here is **Special App Access** - Click it.

Search for the **Picture-in-Picture** option and click.

All applications with Picture-in-Picture features will be listed here and they are enabled by default. If you want to disable any application, just press it and swipe the slider to Off.

Very simple, right.
