

Instructions for using safety electric blankets

Using electric heating blankets for winter is the choice of many families today to keep sleep good and warm. However, using electric blankets is safe and effective. All will be in the article below.

In the winter, many heating devices are used by women to warm up their families such as heating fans, heating lamps, oil heaters, packs . Among them, electric blankets are also a necessity. Heating is favored by many families to make their sleep more warm and delicious. However, is it safe to use electric blankets? Let's find out with Quantrimang!

Instructions for using electric blankets properly and safely

Step 1: You spread the blanket evenly on the bed, projection. Next, you should cover the electric blanket with a thin layer of gas. Note that the stamped part is spread above to ensure maximum utilization of heat generation and energy saving.

Step 2: Turn off the power switch on the thermostat (switch to level 0).

Step 3: Plug one end of the power supply cord from the thermostat into the blanket. Then, plug the power cord into a 220V power outlet. Adjust the temperature according to the incremental heating rate from small to large in accordance with the demand.

The use of electric blankets is more durable

1. When folding the blanket, leave the controller in the blanket.
2. Do not arbitrarily remove the heat controller, do not allow the power cord to twist.
3. Do not sit or place heavy objects on the blanket while folding to avoid damage to the power cord.
4. Do not leave blankets near high temperatures and use a needle or other sharp object to break the blanket.
5. Use at medium temperatures to help extend the shelf life of blankets.
6. Limit washing of blankets and electric mattresses. Do not wash the blanket more than 5 times during the usage period.

Should electric blankets be turned on all night?

During the harsh winter, many families warm by using electric blankets for young children. However, the abuse of turning on the heating pad all night for heating is absolutely not recommended. Because when you are fast asleep, users are often unaware and very easy to burn when the temperature is too high, especially for the elderly and young children.

Therefore, at present, many electric blankets are usually installed with the function of automatically turning off safety. Thus, users will not need to worry even if they forget to turn off the timer. To use the power buffer safely, you need to keep in mind some of the following.

Note to use electric blanket safely and effectively

When using blankets

1. Should turn on the electric blanket before going to bed for about half an hour and to ensure sleep, it is recommended to adjust the temperature of the blanket lower than the body temperature a bit. It is recommended to use 3 - 4 to warm the blanket for 10-15 minutes before use or to a maximum of 5 if the outdoor temperature is low. When you sleep, you should only use 1 - 2 controls (keep the temperature at 37 degrees Celsius) and be warm and sleep well at night.
2. To ensure the longevity of the blanket and save power, do not plug in the power all night.
3. Electric blankets can be used to line under the sheets, on pads or to cover on people.
4. When brushing, cover the blanket straight, not to fold the blanket.
5. When using, you should spread blankets, electric cushions under hard surfaces and cover with a thin layer of gas on top to prevent dirt.
6. Do not use blankets wrapped around your body.
7. Do not allow babies or the elderly not to control blankets.

When not using a blanket

1. When not using electric blankets for a long time, unplug the power plug to avoid electric leakage or electric shock.
2. Fold the blanket horizontally 4 times. Continue folding the blanket 4 times in length. Do not fold the blankets, power cushions into many folds because it can cause the blanket and cushion to break. Internal wiring is open, causing fire and shock to the user.
3. When storing blankets, put electric heating blankets in a nion bag, cover and leave the controller outside of the plastic bag.
4. Avoid putting water in the blanket controller.

When washing blankets

1. In case of machine washing, the blanket should be placed in the washing net. Wash the blanket in gentle mode, the water does not get hotter than 30 degrees C. (It is best not to wash the blankets, electric pads in the washing machine).
2. If washing the blanket by hand, fold the blanket neatly into the basin, press lightly and evenly over the surface with your hand, avoid twisting and cracking the blanket too hard as it may break the wire inside.
3. Let the blanket dry naturally.
4. Avoid exposing blankets to strong heat or harsh sunlight.
