

Instructions for using Shaders to create facial effects

Shader: AI effects camera is an application that creates AI facial effects through the description you enter. Users can completely change the face and add any accessories to any subject as they wish.

Shader: AI effects camera is an application that creates AI facial effects through the description you enter. Users can completely change the face and add any accessories to any subject as they wish. The facial effects feature on Shader: AI effects camera will not limit any of your ideas, thereby creating a unique photo. Below are instructions for using the Shader application.

How to use the Shader application to create facial effects

Step 1:

We download the Shader: AI effects camera application for iPhone according to the link below and then proceed with the installation as usual.

Step 2:

At the application interface, click Continue to access the main interface of the application. Next you need to agree for the application to use the camera and access the collection.
