

Instructions for using Signal messaging application on phone, PC

One of the messaging apps that many people choose to replace Telegram is Signal, with security features that are not inferior to Telegram.

One of the messaging applications that many people choose to replace Telegram is the Signal application, with security features that are not inferior to Telegram. Currently, you can use Signal on both phones and computers, supporting your work. The application has a PIN code generation feature that encrypts your personal information stored in the application, ensuring that only you can access that information. In addition, the Signal application also has all the basic features like other messaging applications, adding the feature of self-destructing messages over time to ensure the privacy of messages. Below are instructions for using the Signal application on phones and computers.

How to use Signal app on phone

Step 1:

Download the Signal app on your phone using the link below and install the app as usual.

1. Download Signal Android App
2. Download Signal for iOS

First you need **to enter your personal phone number** to use Signal. Then **enter the code received from the registered phone number** .

Điền số điện thoại của bạn để bắt đầu

Step 3:

In the main interface of Signal, we will search for friends by **clicking on the pen icon** . Next, click on Find contacts by phone number, or invite friends to use Signal. You enter your friends' phone numbers, or search in the contact list.

Then you text them to **accept the friend request** . So we can text each other on Signal.

Step 5:

Below the messaging box, we can **send live photos** or live recording files. The captured image has some additional editing tools as shown below.

Or you can also **adjust the mode to automatically delete the photo** after the recipient has finished viewing it, by **clicking on the infinity icon** as shown below. Click the Send icon to send the message.

Step 6:

You can also **tap the plus sign** to send animated images, contact image files, and locations. Or send stickers using the sticker icon in the messaging box. Tap the download icon to download.

ĐANG GỌI

Luôn Chuyển tiếp Cuộc gọi

Chuyển tiếp mọi cuộc gọi qua một máy chủ của Signal để tránh làm lộ địa chỉ IP của bạn cho các liên hệ. Bật tính năng này sẽ làm giảm chất lượng cuộc gọi.

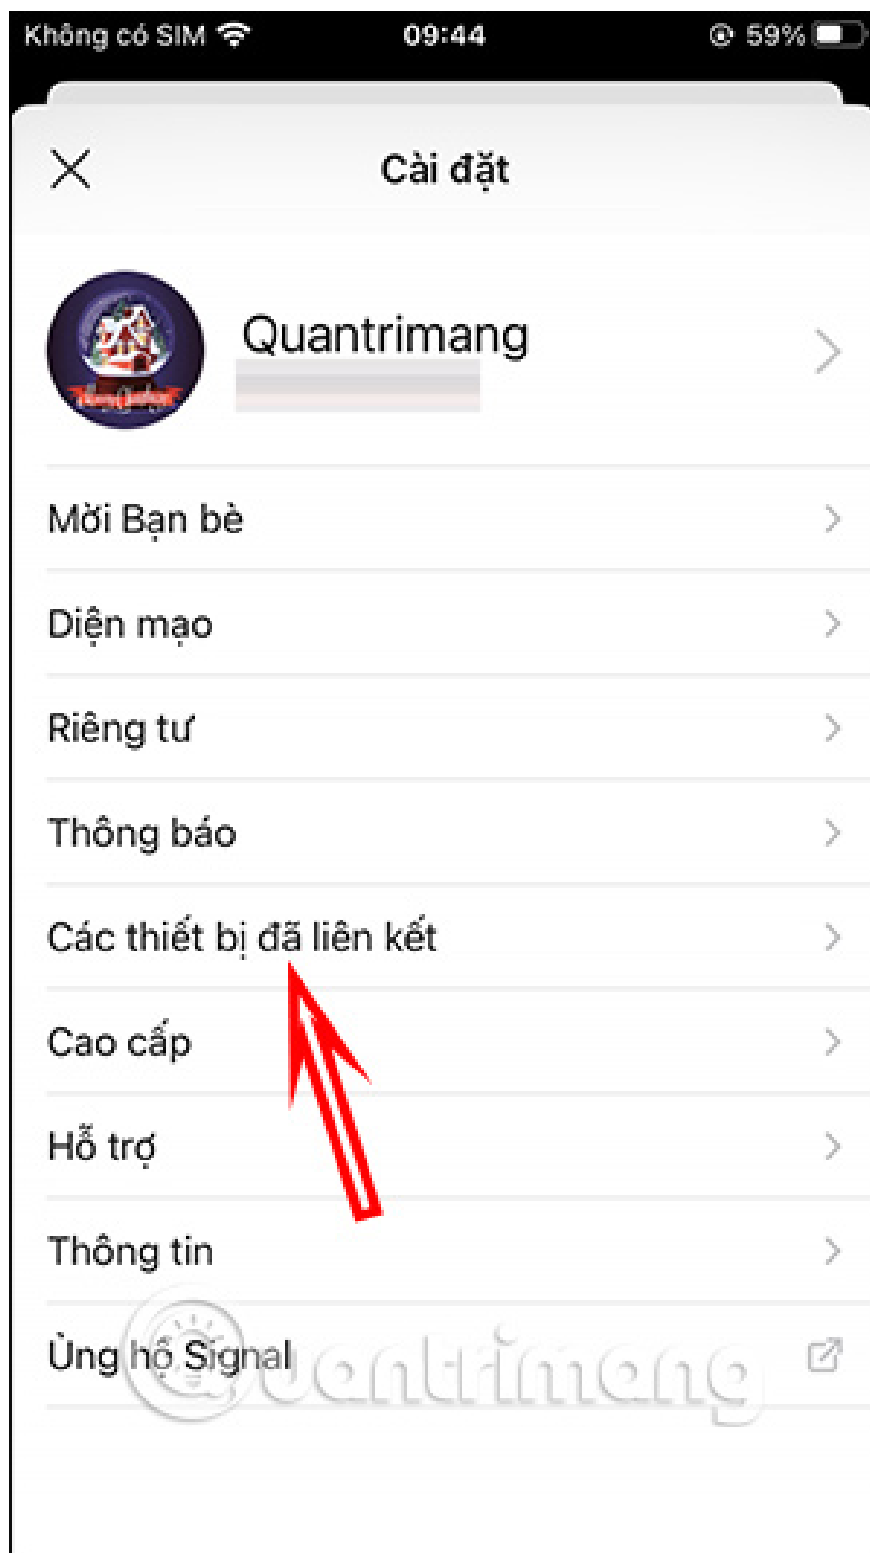

Instructions for using Signal on computer

Step 1:

You install Signal Windows version from the link below.

1. Download Signal desktop version

Then we **have to install Signal on the phone** and click on **the avatar** , select **Linked devices** . Next, scan **the code displayed on the computer** .

Quét Mã QR

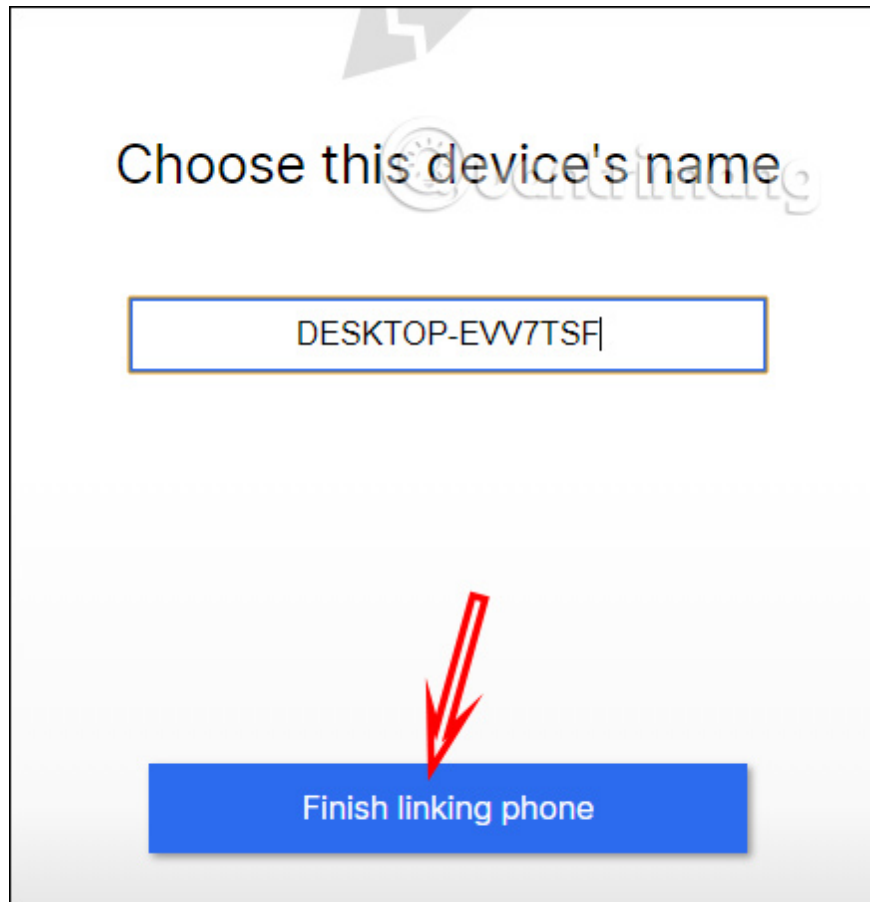

Quét mã QR trên thiết bị bạn muốn liên kết.

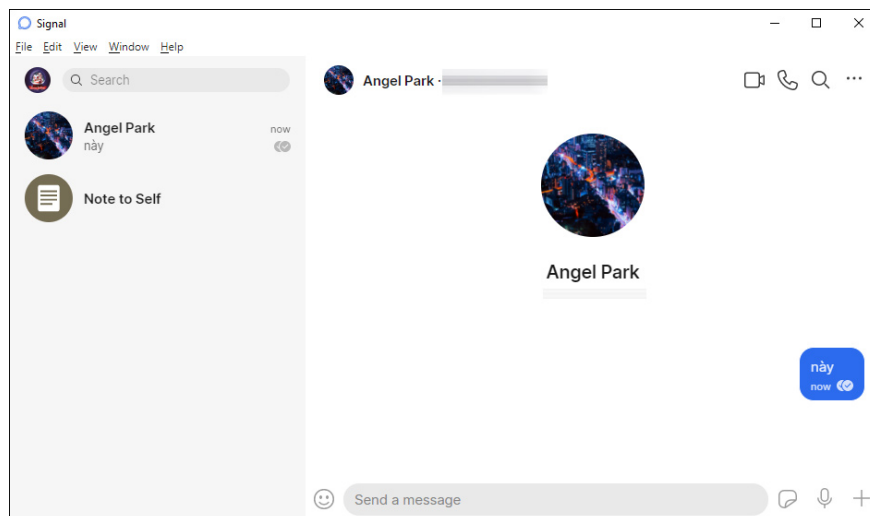

Step 2:

Enter a name for the account that matches the name on the mobile version or a different name depending on your needs, then **click Finish linking phone** .

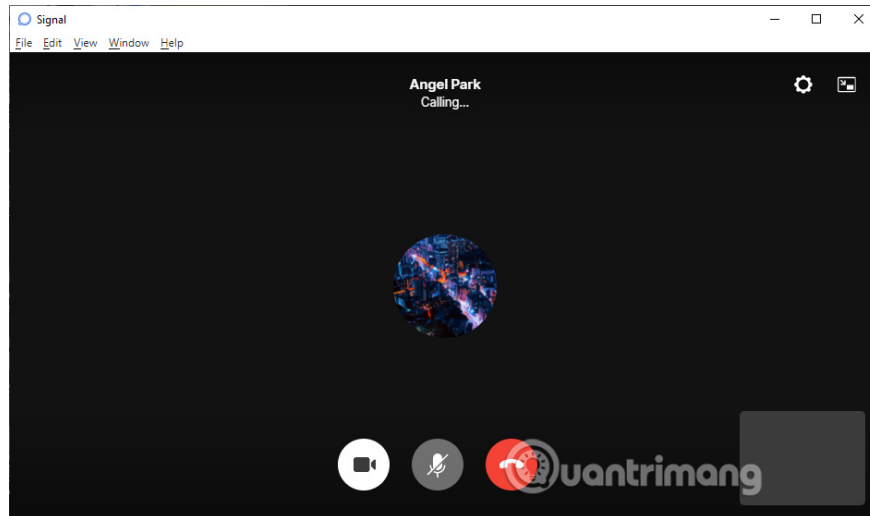

Step 3:

Signal content on your computer will not sync on your phone, so the account you sent a message to on your mobile will not appear on your PC. You **enter the phone number in the search box** to send a message. Below is the messaging interface on Signal on your computer.

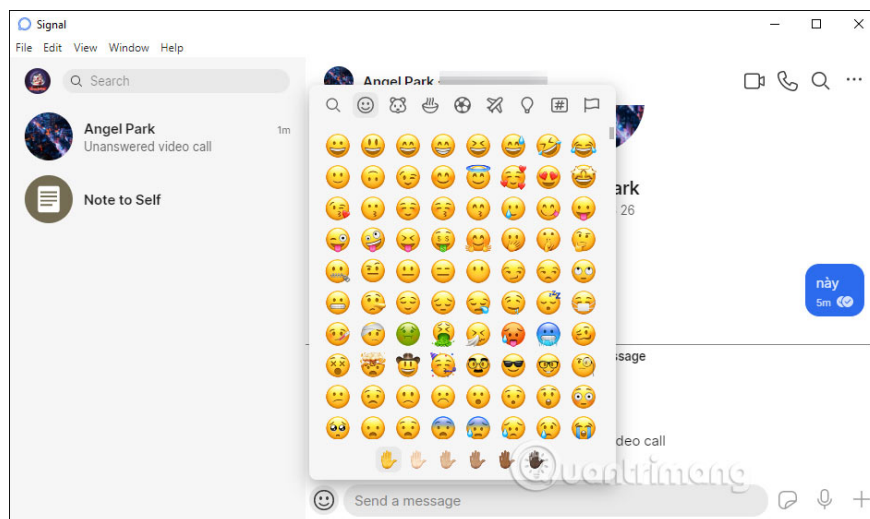

Step 4:

You can still make video or voice calls to friends like on your phone.

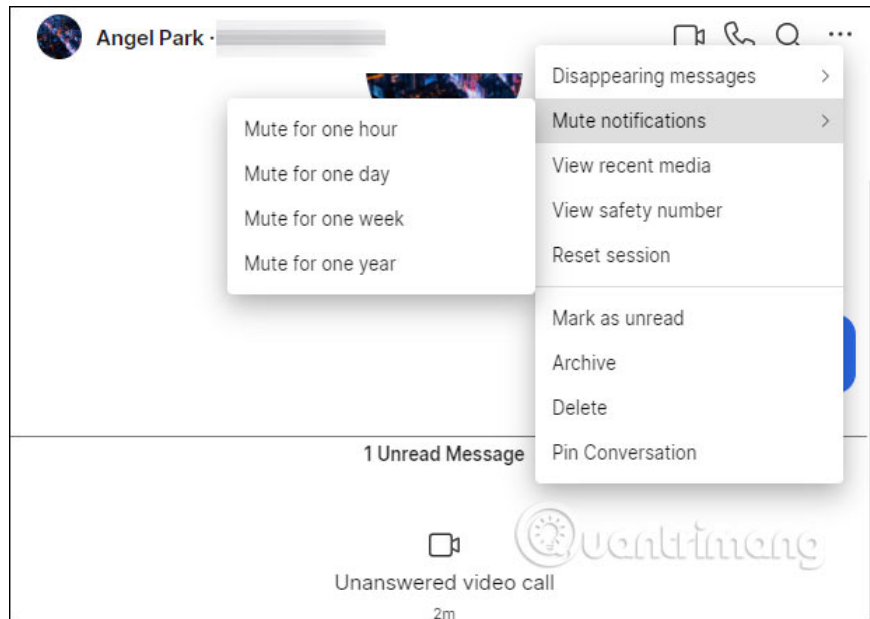

Step 5:

Below the message box are still options to send files of unlimited formats, send icons, and stickers as usual.

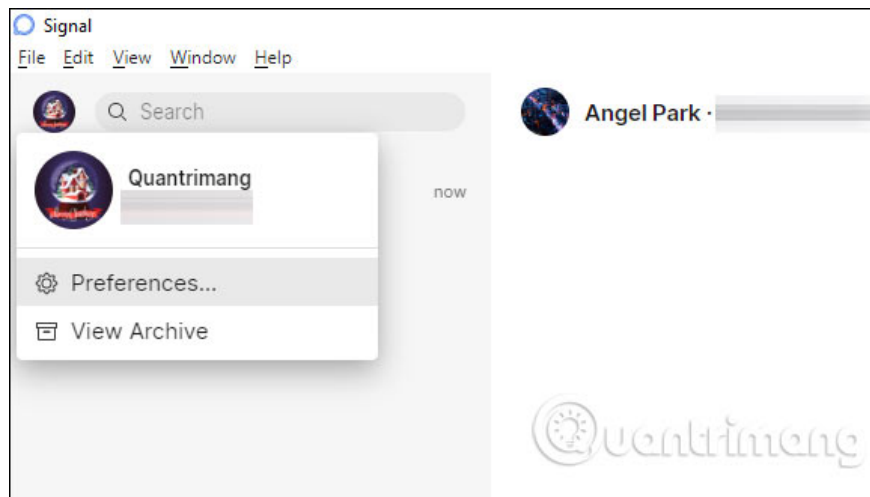

Step 6:

Tap on **the 3 dots icon** in the right corner and it will show the setting options as shown below. You can also choose to have messages disappear automatically by tapping on Disappearing messages.

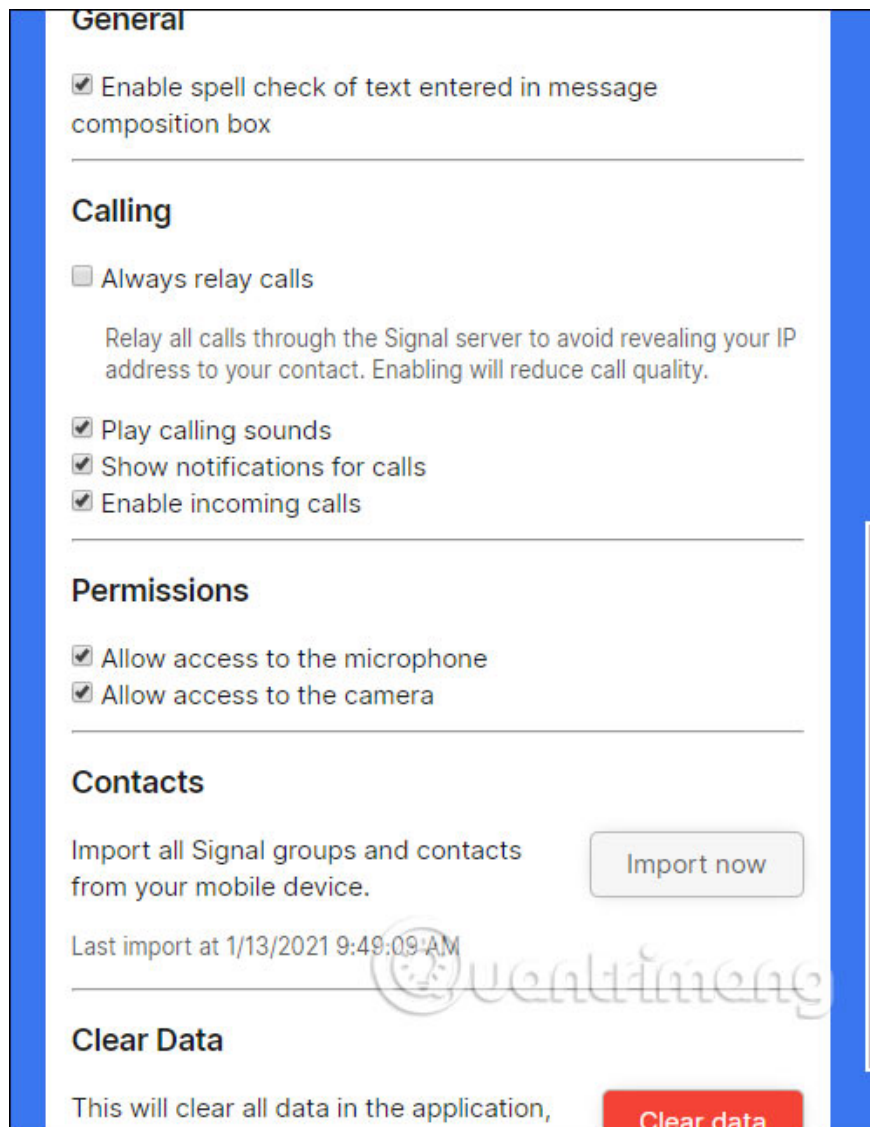

Step 7:

Click on **the avatar** and then click on **Preferences** to open the settings interface on the computer.

In this interface you can adjust notification options, enter phone numbers from mobile to computer when linked together,.
